*TRS-80 IS A TRADEMARK OF RADIO SHACK, A DIVISION OF TANDY CORP.

Introducing the Most Powerful Business Software Ever!

TRS-80™ (Model I, II, III, or 16) • APPLE™ • IBM™ • OSBORNE™ • CP/M™ • KAYPRO™

FREE--TRS-80 Mod I, III & 4
programs supplied on DosPlus
(minimum system). Complete
DosPlus also available.

The VERSABUSINESS™ Series

Each VERSABUSINESS module can be purchased and used independently,
or can be linked in any combination to form a complete, coordinated business system.

VERSA RECEIVABLES™

\$99.95

VERSA RECEIVABLES™ is a complete menu-driven accounts receivable, invoicing, and monthly statement-generating system. It keeps track of all information related to who owes you or your company money, and can provide automatic billing for past due accounts. VERSA RECEIVABLES™ prints all necessary statements, invoices, and summary reports and can be linked with VERSA LEDGER II™ and VERSA INVENTORY™.

VERSA PAYABLES™

\$99.95

VERSA PAYABLES™ is designed to keep track of current and aged payables, keeping you in touch with all information regarding how much money your company owes, and to whom. VERSA PAYABLES™ maintains a complete record on each vendor, prints checks, check registers, vouchers, transaction reports, aged payables reports, vendor reports, and more. With VERSA PAYABLES™, you can even let your computer automatically select which vouchers are to be paid.

VERSA PAYROLL™

\$99.95

VERSA PAYROLL™ is a powerful and sophisticated, but easy to use payroll system that keeps track of all government required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with totals displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the VERSA LEDGER II™ system.

VERSA INVENTORY™

\$99.95

VERSA INVENTORY™ is a complete inventory control system that gives you instant access to data on any item. VERSA INVENTORY™ keeps track of all information related to what items are in stock, out of stock, on backorder, etc., stores sales and pricing data, alerts you when an item falls below a preset reorder point, and allows you to enter and print invoices directly or to link with the VERSA RECEIVABLES™ system. VERSA INVENTORY™ prints all needed inventory listings, reports of items below reorder point, inventory value reports, period and year-to-date sales reports, price lists, inventory checklists, etc.

VERSA LEDGER II™

\$149.95

VERSA LEDGER II™ is a complete accounting system that grows as your business grows. VERSA LEDGER II™ can be used as a simple personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system **without any additional software.**

- VERSA LEDGER II™ gives you almost unlimited storage capacity (300 to 10,000 entries per month, depending on the system),
- stores all check and general ledger information forever,
- prints tractor-feed checks,
- handles multiple checkbooks and general ledgers,
- prints 17 customized accounting reports including check registers, balance sheets, income statements, transaction reports, account listings, etc.

VERSA LEDGER II™ comes with a professionally-written 160 page manual designed for first-time users. The VERSA LEDGER II™ manual will help you become quickly familiar with VERSA LEDGER II™, using complete sample data files supplied on diskette and more than 50 pages of sample printouts.

SATISFACTION GUARANTEED!

Every VERSABUSINESS™ module is guaranteed to outperform all other competitive systems, and at a fraction of their cost. If you are not satisfied with any VERSABUSINESS™ module, you may return it within 30 days for a refund. Manuals for any VERSABUSINESS™ module may be purchased for \$25 each, credited toward a later purchase of that module. All CP/M based Computers must be equipped with Microsoft BASIC (MBASIC or BASIC 80).

ANYONE CAN USE OUR SOFTWARE!

MAIL PAC II and CHECKING PLUS represent a new generation of computer software. Our software doesn't even need a manual! Anyone can quickly learn to use either package by following simple, explicit on-screen instructions. But, for those of you who insist -- we've included a complete user's manual as well.

MAIL PAC II FEATURES:

High Capacity --

Stores from one to one million names in Zip Code, Numerical or Alphabetical order. The only limitation is your disk storage space.

Flexibility --

Prints your mailing list on 1, 2, 3, or 4-across labels (with up to 5 user-defined lines on each label) or as a compact, user-designed directory. The record length is completely user-defined, and each field within each of your records is completely variable (allowing storage of any number of characters for any particular address entry). Devote fields to telephone numbers, codes, or even special messages related to each particular name on file.

Powerful --

A built-in word processor allows you to create personalized form letters for each address on your list (or just a particular group of addresses).

Ease of Use --

Create new mailing lists, review existing lists, handle changes of address, delete cancelled names, sort lists, and purge duplicate names from your files. Complete on-screen instructions tell you in plain english exactly how to accomplish all of these tasks.

MAIL PAC II \$99.95

Both Programs Require 48K And At Least One Disk Drive (2 Drives For Higher Storage Capacities). And All Hard Disk Systems Are Supported.

CHECKING PLUS FEATURES:

Complete Check Register --

Checking Plus stores your entire check register in a disk file, and then uses the data to balance your account, track your expenses, and help you make budget projections. Review the entire checkbook, enter checks, deposits, fees and adjustments, mark outstanding checks when paid, and get an instant cash balance at any time. All data can be viewed onscreen or printed out in report form.

Tax Preparation --

Storage of monthly and yearly totals and other important information aids in income tax preparation, for your personal use or for your accountant.

Handles the Details --

Store names and addresses for frequently written checks, then print checks to fit standard window envelopes, eliminating the need for extra typing. You can even store any comment, explanation or other message (up to 255 characters) related to a particular check.

Automatic Monthly Bill Payments --

Enter amounts and names of payees for all of your fixed-cost monthly payments, and then sit back while the system automatically prints checks.

CHECKING PLUS \$99.95

FREE--TRS-80 Mod I, III & 4 programs supplied on DosPlus (minimum system). Complete DosPlus also available.

DOSPLUS

Experience the Power

"Awesome". The word only begins to describe the power of DOSPLUS 3.5, the latest in the line of popular Disk Operating Systems from Micro-Systems Software, Inc.

Long known for its production of high quality, user friendly operating systems, Micro-Systems Software introduces a whole new breed of DOSPLUS. Version 3.5 explores avenues of power and flexibility previously untouched in TRS-80 DOS.

DOSPLUS 3.5 is the last word in professionally crafted operating systems and combines un-

limited power and flexibility with the same reliable and steady performance you have come to expect from the name DOSPLUS. In short, DOSPLUS puts you in total control. From its parameter rich library, to the many and powerful utilities, to the full featured BASIC, DOSPLUS is THE system for the TRS-80 Model I or III.

Priced at \$149.95, DOSPLUS gives your micro-computer mainframe power without mainframe price. Order yours today and experience the power...DOSPLUS!

- DOSPLUS 3.5's total device independence and completely external device structure allow interface to almost ANY kind of peripheral. Support will be given for hard disks, printers, and non-standard floppy drives.
- In addition, DOSPLUS 3.5 offers many utilities including a menu driven user interface that allows file manipulation at the touch of a key, full file and disk editing utilities, and a directory check utility with optional repair. Standard utilities let you map file locations, restore killed files, or offset file locations in memory.
- DOSPLUS 3.5 also includes one of the best Disk BASIC interpreters available with any DOS. With exclusive features like controlled screen formatting and label ad-

dresssing, DOSPLUS BASIC puts you a step ahead. Single step debugging, global text editing, program cross referencing, and a multi key/multi array sort are all standard.

- The DOSPLUS 3.5 manual will set new standards in documentation. Almost 400 pages of clear, easy reading text that will acquaint you with all areas of system operation. The user's manual is written in English instead of "computerese" and is aimed at both the novice and the experienced user alike. The technical manual clearly documents every part of the system and will prove a gold mine to programmers seeking to interface with DOSPLUS.

FOR ALL

IBM-PC • IBM-PC • APPLE II • TRS-80 • R

Percom Data Corporation has the hard disk drive system for just about ALL personal computers including of course... IBM-PC, APPLE II, and TRS-80. Percom Data's innovations with 5 1/4" Winchester technology mean that for most personal computers... having a reliable hard disk system is as easy as hooking up a cable.

A Percom Data PHD™ will interface with your present system... and your future system... so if you do change computers, you can still keep your most important investment... your Percom Data Hard Disk Drive.

Because Percom Data helped create the industry standards of today... new designs in software and hardware will make your selection of a Percom Data Hard Disk Drive pay off... tomorrow through system compatibility.

A Percom Data PHD works so capably because we take the time to correctly develop interface software to your computer which leaves no performance holes for you to fall into. Percom Data knows software functionality is the key to hardware performance.

Today Percom Data PHD supports a variety of software to match your computer:

IBM-PC, PC DOS™ 1.1 OR 1.0

CP/M-86™, CONCURRENT CP/M-86™

APPLE II, DOS 3.3, CP/M™

TRS-80™ MODELS III & I, DOPUS, LDOS

IMAGINE... Percom Data Winchester 5 1/4" technology... for today's computers... and tomorrow's.

To receive an informational booklet describing Percom Hard Disk Systems, or to determine if we have a system for your computer call our **Hard-Line Hot-Line at 1-800-527-1222.**

We will also give you the name of a nearby authorized Percom Data Dealer. Dealer inquiries are welcome.

Cover by Chris Demerest

In a way, I suppose you might say I sold out, but I plead guilty with an explanation. And by the way, if you're interested in joining a fast-rising firm, you could do worse than read on.

It all started this last spring when some chaps from one of the bigger banks called saying that they had a large foreign publisher who was looking to acquire something like my micro publishing empire. I wasn't much interested because I enjoy what I'm doing more than anything else I can imagine. But what would it cost to listen, right?

So they came to visit and looked over our place. I showed them our growth in sales, which has run around 50 percent a year for the last eight years, limited only by all growth being 100 percent self-financed. They mumbled vaguely about \$50 million, which I have to admit got my attention. I'd really never given much thought to what the whole mess might be worth.

The word that I was thinking of selling began to spread and new suitors started calling every few days. The more I talked with these firms, the more I realized that this probably was a good time to merge with a larger firm, to give me the money to invest in some new projects. I never had much of a personal need for money, so selling out for

Green sells out

a big bundle of cash had little attraction.

No, it would be worth merging if I could get the money to start magazines at a faster rate and thus be able to better keep up with the needs of the micro-

computer industry. And I had an idea for a new type of magazine I wanted to try out. If it worked, I'd have a way to get perhaps 50 more like it going, each with expected sales on the order of \$5 million a year or more.

Then there was my idea of a new type of school, a business/technical institute geared to the needs of the 80s. The more I thought about it, the more ideas for new divisions of Wayne Green Inc. came to mind. With some cash available for getting these new businesses and publications going, we could step up our growth enormously. I did some sales projections and I could see us growing to \$1 billion in sales within 10 years, just on the plans already in mind.

As I talked with the firms interested in merging, I found several of them excited about my ideas and plans. I've got a good record of coming up with innovative ideas, so there wasn't much skepticism.

The final choice of merger partner was most difficult. Several large firms put it bluntly: They needed me and I could name my price. Now, I want to tell you, that is fantastic for the ego. I really wasn't into shopping around for the highest offer because the difference between \$50 million and \$100 million is a lot less than the compatibility of the merger. And numbers like that don't mean anything anyway—they're just very big numbers.

On May 22 I signed a preliminary agreement with Pat McGovern. He's the publisher of *Computerworld*, *InfoWorld*, and so on... several times the size of my firm in sales. The date was significant to me because it was eight years to the day from when I called the editor of a small micro newsletter to come up and discuss starting a magazine... and we agreed to give it a try. Five weeks later the first issue of *Byte* went to the printer.

The merger means that we'll be able to do more promotion of our current magazines. It means we'll be able to start more magazines—and I have a bunch of them all planned out. Each magazine is going to require a staff, so we'll be looking for programmers, people for advertising sales, typesetting,

SLICK PAGES? NO! GREAT DEALS? YES!

Computer Shopper pages aren't slick because they were designed for one purpose: to put buyers in touch with sellers at the lowest possible cost. This resulted in bargains on new and used equipment and software. Individuals nationwide are able to list their pre-owned items for only a few dollars. This created hundreds of classified ads in over 100 big 11x14 pages.

And to make sure there were enough buyers for advertisers, the subscription price was set low, too! So strike your first deal by taking advantage of this special trial subscription offer, today! **6 months, \$6 or 12 months, \$10** Money back guarantee. MasterCard and VISA accepted

THE SWITCH

SWITCH TO 5¹/₈" DOUBLE DENSITY

LNDoubler 5/8

FEATURES

- 5- and 8-inch* disk drives
- Single- & double-density
- Any size and density in any mix
- Read Model I, II* and III disks
- 5- or 8-inch* system disk
- Single & double sided disk drives
- DOS+ 3.3.9 included, with Disk BASIC.
- 6 month warranty
- Up to 3.75 megabytes online
- Easy installation - plug-in & run
- Analog phase lock loop data separation
- Precision write precompensation
- Regulated power supply
- Guaranteed operation at 4MHz
- All contacts gold plated
- Solder masked & silk screened
- Runs under DOS+ 3.3.9, TRSDOS 2.3, NEWDOS 2.1, NEWDOS/80 1.0, LDOS, NEWDOS/80 2.0, and ULTRADOS
- Reads 40- and 35-track disks on 80-track drive
- FD1791 controller + your FD1771
- Fits Model I expansion interfaces
- Fits LNW expansion interfaces
- Track configurations to 80-tracks
- 5 inch disk storage increased to:
 - 161,280 bytes - 35-track SS/DD
 - 322,560 bytes - 35-track DS/DD
 - 184,320 bytes - 40-track SS/DD
 - 368,640 bytes - 40-track DS/DD
 - 368,640 bytes - 80-track SS/DD
 - 737,280 bytes - 80-track DS/DD
- 8 inch disk storage increased to:

591,360 bytes - 77-track SS/DD
1,182,720 bytes - 77-track DS/DD
SS: single-sided DS: double-sided
SD: single-density DD: double-density

COMPLETE - The LNDoubler 5/8, switches your Model I or LNW-80 into the most versatile computer you can own. The LNDoubler's switch allows you to boot from 5- or 8-inch system disks, and it's accessible from outside the interface. The LNDoubler 5/8 comes with a double-density disk operating system (DOS+ 3.3.9), complete with BASIC and utility programs... ready to run your software NOW!

VERSATILE - Whether you want single-sided, double-sided, single- or double-density, 5- or 8-inch operation, complete versatility is here today! Any combination of 5- and 8-inch disk storage is possible with the LNDoubler 5/8. Each of your present 40-track, single-sided 5-inch drives will store up to 184,320 bytes (formatted storage) - that's an 80% increase in storage capacity for only half the cost of just one disk drive. With three 8-inch double-density, double-sided drives your Model I will have 3.75 Megabytes of online storage - that's more storage than a Model II or Model III!

ADVANCED - The LNDoubler 5/8 is the most technically advanced, tested and reliable double-density

board you can buy. The LNDoubler 5/8 has more features, more options and more software support than any other product of its kind.

EASY TO INSTALL - The LNDoubler 5/8 is easy to install. There are no traces to cut, no wiring to do, just a screwdriver and a few minutes of your time is all that is required. The instructions are fully illustrated for all interfaces. In minutes you will be 'up-and-running', and enjoying your computer as never before.

COMPARE - Compare features, compare quality, compare value, and make the SWITCH today!

Immediate delivery from stock - at your dealer NOW for only

\$ 219.95

REMARKS

graphics arts, circulation, data processing, and so on.

Then there are a number of special projects, such as my planned technical/business college. We're going to need management teams to get these projects going and to run them. Most of this is going to be done in New Hampshire, but eventually we'll be growing in other areas of the country.

If you're interested in getting involved with some exciting new ideas, you should get a letter off to me telling me what you think you might be able to do. I'm looking right now for non-smokers with a history of enthusiasm and the ability to make things happen with a minimum of supervision.

There won't be any astronomical salaries as we start new projects, but we plan to make it well worth the while of those who are the most helpful in starting these new ventures.

For instance, I have a number of products that I'd like to have made in Asia and import for sale here. I've got the

contacts in Asia to handle that end, but I need the people to handle the project from the New Hampshire end—setting up the advertising, importation, and distribution of the products. This should grow into a substantial business by itself.

Why New Hampshire? Well, mostly because this is one of the best places in the country to live. The quality of life is wonderful and the cost of living far less than New York or Silicon Valley. We still don't have any state sales or personal income taxes in New Hampshire. We're in a small town with all of the advantages of a small town. The people are friendly and the crime rate is low.

If you're looking for the chance of a lifetime to get in on some new projects... and if you think you can hack it... let me know. You're going to have to prove you can get things done. We have no free rides here, just a bunch of enthusiastic people all having the times of their lives working hard and turning out first-rate products. We're working

out of old houses, converted motels and barns, and so on. This is not IBM.

You can be old, young, black, white, red, brown, male, female, undecided, but if you smoke please don't bother me, okay? The air up here is invisible and we want to keep it that way.

The merger means that we have a guarantee of the money we need to move ahead on as many projects as I can find teams to work on. And if we run out of projects to get started, I'll have more. I come up with an idea for a good solid project every few days.

When you think about it, by the time you put my six magazines together with those Pat is already publishing, we're a very strong combination. I think we'll be able to parlay this group into a pilot model of the college of the future, into perhaps an educational satellite television network... things like that.

Pat is much like I am—full of ideas and enthusiasm. I think we're going to really make things hum in the micro-computer field. Care to join us? ■

COMPUTER KITS - FROM \$69.95

LNW SEMI-KITS can save you hundreds of dollars. By obtaining your own parts at the lowest possible cost and assembling the **LNW SEMI-KITS**, you can have the most highly acclaimed microcomputer in the industry - the **LNW80**. The **LNW SEMI-KITS** are affordable modules. You can start with a modest cassette system and expand to a full 4Mhz TRS-80 compatible system with 5 or 8 inch double density disks and color at any time.

A. LNW80 CPU - Made of high quality FR4 glass epoxy double sided circuit material, with plated-through holes and gold edge connector. It is fully solder-masked and silk screened. Here are just some of the outstanding features you will have when your **LNW80 CPU** board is fully assembled: • 16K RAM • Color and black and white video • 480 x 192 high resolution graphics • 64 and 80 column video • 4 Mhz Z80A CPU • Upper and lower case display • 500 and 1000 baud cassette I/O - **\$99.95**

B. SYSTEM EXPANSION - Expand the **LNW80** computer board, **TRS-80** and **PMC-80** computer with the following features: • 32K memory • Serial RS232C and 20Ma port • Real time clock • Parallel printer port • 5 inch single density disk controller • Expansion bus (screen printer port) • Onboard power supply • Solder-masked and silk screened legend - **\$89.95** (tin plated contacts) - **\$84.95** (gold plated contacts)

C. KEYBOARD - 74 key expanded professional keyboard - includes 12 key numeric keypad. Fully assembled and tested. - **\$99.95**

D. COMPUTER CASE - This stylish instrument-quality solid steel case and hardware kit gives your **LNW80** that professional factory-built appearance. - **\$84.95** Add \$12.00 for shipping.

E. SYSTEM EXPANSION CASE - This stylish instrument-quality solid steel case and hardware kit gives your **SYSTEM EXPANSION** interface that professional factory-built appearance. - **\$59.95** Add \$10.00 for shipping.

F. LNW80 CPU - HARD TO FIND PARTS KIT - \$82.00

G. LNW80 VIDEO - HARD TO FIND PARTS KIT - \$31.00

H. SYSTEM EXPANSION - HARD TO FIND PARTS KIT - \$27.50

I. LEVEL II ROM set (6 chip set) - \$120.00

VISA and MasterCard accepted. Add \$3.00 for shipping plus \$1.00 for each additional item. All shipments via UPS surface. Add \$2.00 for U.S. Mail. Shipments outside continental U.S.: funds must be U.S. dollars. Sufficient shipping costs must be included with payment.

PROOF NOTES

The editors look at the issues

Fear of acronyms

It's by no means a definitive dictionary. Some mass-market computer magazines pepper their articles with asterisks, referring novices to a comprehensive glossary; we're more technically oriented than that, and decided to take "bit" and "disk" for granted. We may add some words as well as acronyms to the monthly list—"modem" was a strong contender in editorial meetings.

Tell us what you think of the idea. We don't want to insult our readers' intelligence, but we want 80 to be accessible to new TRS-80 fans as well as old ones. If it weren't an even worse cliché than the pocket protector, we'd say we want to be user-friendly. —E.G.

The first cliché about computer buffs is that they carry pens in plastic shirt-pocket liners. The second is that they don't speak English.

Pocket-protector jokes belong to engineering, not computing; but the latter charge has some merit. Computer owners are famous for veering into jargon; indeed, anyone exposed to micros for any length of time begins speaking a kind of esoteric shorthand. Liberal arts graduates, taking entry-level positions at 80 Micro, are initially baffled. Within days, though, they're striding through the office saying "Where's the RS-232 cable for the 4?" and "Anybody got a TRSDOS 1.3 I can back up?"

The advent of the computer age is no excuse for bad or stupid language—even if you have a terminal package and modem, you do not "interface" with people. But, in a magazine like 80, the use of computer terms and abbreviations is not only appropriate but essential. To help readers who aren't familiar with some micro-oriented acronyms, we're introducing the glossary that appears below.

Glossary

ASCII	American Standard Code for Information Interchange. Character code that refers to the computer's internal recognition of letters, numbers, and symbols.	
CP/M	Control Program/Monitor or Control Program for Microcomputers. A disk operating system produced by Digital Research.	
CPU	Central Processing Unit. Computer module that retrieves, decodes, and executes instructions.	
CRT	Cathode Ray Tube. The television tube used to display pictures or characters.	
DIP	Dual In-line Package. A standard integrated circuit package with two rows of pins at 1/10-inch intervals.	
DOS	Disk Operating System,	
		such as DOSPLUS, NEW-DOS80, TRSDOS, and LDOS.
	EPROM	Erasable Programmable Read Only Memory. Usually refers to a PROM that can be reused several times. It's erased with ultraviolet light and then programmed with a special PROM programmer.
	K	Kilobytes. 1K = 1024 bytes. Used in referring to computer storage capacity.
	RAM	Random Access Memory. This is the primary storage area of a computer. The information in RAM is lost when power is disconnected.
	ROM	Read Only Memory. This information cannot be changed and is not lost when the power is off.

Scarfman Lives

When my copy of Scarfman died, I returned it to the manufacturer, Cornsoft Group, for a new copy. I didn't make a copy for myself or my friends, but respected the manufacturer's copyright.

When Cornsoft inadvertently sent me a replacement disk instead of a tape, I sent it back and quickly received the tape.

You see, software companies don't mind replacing media, they just don't want you to steal their programs. So use your copy as much as you want, but let's not ruin the chain of software that took so long to build.

Patrick Kellogg
10030 Heron Ave. N.
White Bear Lake, MN 55110

Author Turned Consumer

Much has been written recently about software piracy, disk copy protection, obtaining version updates, and the like. As a software author and consumer, I have contrasting views on the subject. Today I must put my author hat aside and take the side of the consumer.

For over three years I have been trying to get Radio Shack to do something about a bug in their Model I VisiCalc program. The problem has to do with the @EXP() function, and working around it makes calculating engineering and interest data awkward. Letters and phone calls have had little effect; refraining from future Radio Shack software purchases could constitute a partial loss of my original investment.

Last year I purchased the UltraPX data-base manager from CIE. In Janu-

ary, I ordered the upgrade and was informed that I must return the original to get the upgrade. CIE has since left the software marketplace leaving me with only stripped-down, working copies of the software. That is partly my fault since I failed to make a back-up copy prior to returning the disk.

Now, if some company chooses to pick up the product and offer upgrades, I no longer have the original software as proof of purchase. If someone can put me in touch with retired Col. Charles D. House (U.S. Air Force), author of UltraPX, I'd appreciate it.

Charles E. Burton
1720 S. DeFrame Court
Denver, CO 80228

Interfacing Computers

I think you should print more articles on interfacing computers to outside sources, such as burglar alarms, timers, or computer-controlled switches.

Also, could you give me the address of a Model III user's group or club in my area?

Paul Bukowski
217 Calkins Road
Palmer, MA 01069

You'll find a home-control project in our upcoming November issue. While you're waiting, you can get together with the folks at the Western Massachusetts Computer Club, 134 Breckwood Circle, Springfield, MA 01119.—Eds.

MC68020 Update

I just read with interest a letter from Mark P. Fishman published in your June 1983 Input column (p. 14). He stated that Jim Hawkes' article, "The Model 16," (80 Micro, February 1983, p. 228) contained errors regarding the Motorola MC68020.

Mr. Hawkes was correct in stating

that the 68020 will be a full implementation of the 32-bit architecture, and will indeed have 32 address lines and 32 data lines, not the 24 address lines Mr. Fishman claims.

The Model 16's MC68000 has 24 address lines and a 16-bit data bus. Also, there is no such thing as an MC68032 currently in the works.

In addition to the full 32-bit architecture, the 68020 will have onboard cache, an enhanced instruction set, coprocessor operations, increased speed, and the virtual machine capabilities of the newly introduced 68010. The 68020 will be upward compatible with the 68000, 68008, and 68010.

Austin, TX 78721

Enlarge "Barrier" Display

I enjoyed "Barrier Level II" (Fun House, 80 Micro, May 1983, p. 362), but the invisible maze takes up only a third of the display screen. By enlarging the game screen to display size, I have made the game more difficult and more fun to play.

Try the changes in Program Listing 1 for more action.

Paul S. Marzovilla, Jr.
4602 Barnaby Court
Virginia Beach, VA 23455

Penpals Wanted

I'm a South African computer hobbyist looking for American penpals. I own a Spectrum (to you, a Timex-Sinclair 2000), and read 80 Micro regularly, trying to convert programs to run on my micro.

Werner Bredenhann
94 Gladstone St.
Parow, 7500
Cape Province, South Africa

Penetrator Eased

I bought Penetrator last year and found it to be a great game. My Model I Level II machine has the high-speed clock mod that turns on with an OUT

```
100 FOR X=0 TO 124
200 SET(X,Y+46)
230 FOR Y=0 TO 46
250 SET(X+124,Y)
270 SET(X+124,Y)
320 SET(122,42)
410 IF X$=D$ AND Y+4<43 AND
POINT(X,Y+2)<>-1 THEN Y=Y+4
430 IF X$=R$ AND X+4<126 AND

450 IF X=122 AND Y=42 GOTO 470
```

Program Listing 1. Changes to enlarge the Barrier screen.

NOW IT'S TALKING VS 100

VOICE SYNTHESIZER
FOR MODEL I,III,IV
and Coco

- ✓ Unlimited vocabulary.
- ✓ Automatic inflection.
- ✓ Proven VOTRAX technology.
- ✓ We use the famous VOTRAX SC01 phoneme synthesizer. 4 programable pitch level.
- ✓ Built in audio amplifier with volume control. (The Color Computer version speaks through the TV speaker)
- ✓ You can add voice to any basic program in minutes.
- ✓ Super efficient: one single line in Basic will produce a full sentence!
- ✓ Works with any speaker (or add \$5.95 for handsome speaker module).
- ✓ Price breakthrough: same performance as units costing hundreds of dollars.
- ✓ Pronunciation dictionary included for hundreds of common words.
- ✓ Voice editor will help you create unlimited number of words, sound effects, etc..
- ✓ Hundreds of applications —now cost effective in education, robotics, speech therapy, monitoring, games, aid to handicapped, security, prompting...
- ✓ Fully assembled and tested, 90-Day warranty.
- ✓ Ready to plug in and talk.
- ✓ As usual our 15-day money back guaranty protects you.

Program Listing 2. Changes that make Penetrator a more difficult game to play.

254,1 command. Since Penetrator includes this instruction in its code, the high-speed mod is turned on when the program runs and the game becomes very difficult to play.

Now when I want to play Penetrator, I type in Program Listing 2. The line PEEKs at locations from 17408 (the start of the program) to 32767 (the end of the program), and looks for the instruction OUT (FE), A. This outputs byte 1 to the port 254 (FEH). When it finds that opcode, it replaces it with NOPs.

LPRINT Hints

I want to thank Jerry Lindsly for his article, "Drivers and DCBs," in your June 1983 issue. I recently purchased a 16K, cassette-based Model III. Until yesterday, I was unable to interface programs containing LPRINT statements to either my video screen or my printer at my one-key entry command. His identification of the DCB addresses for video and printer output were most helpful.

While that program lets you output programs containing LPRINT statements to the CRT, printer, or both, I prefer to use a five-line program at the beginning of my programs (which I update and print out daily).

This way, I can update my program, check it on my CRT for accuracy, and then print it. I do all of this without changing any LPRINT statements to Print commands. Program Listing 3 works on a 48K Model I with dual

drives. Program Listing 4 is written for a 16K, cassette-based Model III.

*Henry P. Amelung
1205 Juniper Drive
Alamogordo, NM 88310*

Spool It

I find the Spool command very helpful in making electrical job estimates on my Model II. I save the printouts for future reference, or to ensure that accurate specifications go to my supply houses. This spool file is sequential, and the sorting operation is done only once.

From TRSDOS, type SPOOL ON and press the enter key. Type SPOOL N,F=(file name), (drive number) and press the enter key. Then type and enter

BASIC - F:3, RUN(file name). All LPRINT statements go to the spool file.

Once the file is saved, get into Basic and type SYSTEM and press the enter key to return to TRSDOS. To close the spool file until you want to print it, type SPOOL OFF and press the enter key.

To print the spool file from TRSDOS, type and enter SPOOL ON, and then SPOOL P,F=(file name),K. The letter K saves the spool file for future use. Once the spool file is printed, close it again.

To see the file on screen before you print it, load TRSDOS and enter FORMS D, then DUAL ON.

This routes the spool file from the printer to the CRT. Return from TRSDOS to the printer by typing and entering DUAL OFF, and then FORMS.

While the spool file is printing, you can enter Basic and do other work. I use the library commands Forms D, Dual On, Dual Off, and Forms to check LPRINTs on the CRT.

Program Listing 4. This lets you output programs with LPRINT statements to the CRT or printer for a 16K cassette-based Model III.

NEWCLOCK-80

THE RIGHT TIME AT THE RIGHT PRICE

MODEL I

MODEL III

\$59⁹⁵

Wouldn't it be nice if your computer could always boot up with the right time and date and then stay accurate. Newclock-80 will enhance your Model I or III system with powerful clock/calendar/timer functions.

Using LSI (large scale integration) and custom circuits, Newclock-80 provides MO/DATE/YR, HR:MN:SEC plus AM/PM and day of week and even takes care of leap years! It continues to keep time and date with quartz accuracy when the computer is turned off or experiences a power failure. A single battery lasts over 2 years.

Compatibility: Newclock-80 is compatible with any operating system, including DOSPLUS, NEWDOS, LDOS. With its fully decoded circuitry it will work with any other hardware you may own. Bus expanders are available.

Installation is very simple, no tools, no disassembly, no soldering. Just plug it in, that's all. There is no power supply or messy cable. Newclock-80 plugs into the rear of the keyboard ③ or side of the Exp. Int. ②. Model III Newclock fits the 50 pin card edge (underneath) ①.

The Software: Newclock-80 is as easy to use as it is to install. "SET", a Basic program, is used only once to set the time and date and select 12 or 24 hour format. "TIMESTR", also in Basic, patches your computer "TIMES" function to read Newclock-80. It also adds "TIMES" to keyboard-only systems, a short routine is simply "poked" into low memory.

Newclock-80 uses 12 ports (176 to 188): 6 for the time, 6 for the date. The data is conveniently stored in decimal form, no conversion is needed. You can read or modify any digit using simple Basic "INP" and "OUT" statements.

No risk trial. Order your Newclock-80 today, see how easy it is to install and operate then decide within 30 days if you want to keep it. If for any reason you are not delighted with its quality and performance, you may return it for a prompt and courteous refund.

Your unit will come complete ④ with software on tape, detailed instructions, handy reference card, and a 90 day warranty. Specify Model I or III. Software is also available on disk: add \$5. Lithium battery (not included) available from RADIO-SHACK (#23-162) or add \$1.50 to your order.

Thanks to outstanding engineering and efficient manufacturing, ALPHA Products is once again able to offer a great product at a surprising price. Order your Newclock-80 at no obligation today.

"Paintbrush" Graphics

Several MX-80 owners with Grafrax Plus have written me concerning problems with the listings in my article "The Printer as a Paintbrush" (80 Micro, May 1983, p. 218 and June 1983, p. 282).

When I wrote the article, Grafrax Plus was not yet available. The listings published are correct for Grafrax 80, but Grafrax Plus owners need to use 4 bytes to initialize each printer's graphics mode.

The first 2 bytes must be CHR\$(27) and either K or L, depending on whether you want the 480 or 960 mode. The next 2 bytes tell the MX-80 how many graphics bytes the program will send. It is the second of these 2 "count" bytes that causes problems.

With Grafrax 80, that second byte is treated as a zero if it is 255. This is handy for Model I since it can't LPRINT a zero byte. However, Grafrax Plus interprets the byte in modulo 8 arithmetic. Hence, Grafrax Plus perceives a 255 byte as a 7.

This error occurs several times in those listings; line 70 of Program Listing 1b (May 1983, p. 219) is an example. Change CHR\$(255) to CHR\$(8) for the line to run with Grafrax Plus. In modulo 8 arithmetic, this line is interpreted as zero so the program works. Grafrax Plus owners should make this change in each listing wherever they initialize the printer for graphics.

Albuquerque, NM 87111*

Copy-Wrong

I'm writing to express my dismay

over the direction your editorials have taken lately. You recently accepted ads from WittSoft for a product made to copy another company's copyrighted software. This program is in the same class as burglar tools. They are even using a name that we have been using since last November for our ham radio program.

I could go along with accepting their ad, but writing a review of the product is going too far. In the review you sound like you are condoning the use of this product. Do you realize that sales of Model III programs have decreased measurably since last November? This is due to the number of downloads and clubs where people make illegal copies of software.

I went to a computer show in San Francisco and everyone that stopped by our booth told us how much they enjoy Cyborg. It's interesting that you can sell 10 copies of a program in a city and 100 people tell you how much they like it.

Many firms have stopped making TRS-80 software, including Big Five, Med Systems, and Soft Sector Marketing. Others, like Adventure International, are slowing down production of TRS-80 software. Why? Because there isn't a good return for the amount of work necessary to make a good program.

By promoting this product you are actually encouraging Kim Watt, probably the best software author writing for the TRS-80, to start writing for some other computer, like the IBM Personal Computer.

My two favorite authors have stopped writing software for the Model I/III. PowerSoft is writing SuperUtility for the IBM. You seem to be helping to ensure that only mediocre software is produced for the TRS-80.

Radio Shack has promoted good software at a fair price. What other system has its manufacturer selling a word processor or an excellent data base for around \$100? TRS-80 owners have come to expect free software, and with this attitude they're hurting themselves.

Computer Shack has some excellent products. At last count we had 20 different software packages—this could be the largest of any company publishing TRS-80 software. We take out three to five pages of advertising in every issue of 80 Micro, and so far you have reviewed one of our products.

*Gordon Monnier
Computer Shack
Pontiac, MI 48054*

Many people would like us to pass judgement in the name of our readers on various types of software. But that is not our role. We exist as an information source, and we will not censor any material because someone has a vested interest in seeing that material censored.

We deemed that WittSoft's program, Super Duper, would interest a large number of our readers. Publishing a review of the program in no way implies that we endorse pirating Super Utility Plus, any more than publishing a liquor ad would mean that we condone drunk driving.

We remain strongly opposed to software piracy. But editorial censorship would be the easy way out. It would create a fantasy that piracy no longer existed, and would do nothing to stop it.

Finally, any software company that abandons the TRS-80 because of piracy is deluding itself if it thinks that life is easier anywhere else. Piracy is not restricted to the TRS-80, but is an industry-wide problem.—Eds.

Column Changes

I typed Program Listing 3 of the MiniCalc program by John Corbani, (80 Micro, May 1983, p. 140). His program is great, but I could only get five columns across a page. My changes eliminate the extra alpha column headings.

Line 470 contains the code to set an Epson printer to 132 characters per inch, and the reference to number of columns in line 110 is changed from 14 to 15. Line 475 sets unidirectional printing and checks for number of columns.

If there are eight or fewer columns, set Q to 1 and drop to line 480. If there are more than eight, set Q to 9 and go to line 476 to print the first eight columns. Then go to line 480 to print the rest. Line 490 keeps the underline length correct.

With these changes you can print the

NOW MODEL I AND MODEL III!

Now Model III users can take advantage of the ALPHA I/O system too. Our new MOD III/I BUS CONVERTER allows most port based Model I accessories (such as our ANALOG-80, INTERFACER 2 and INTERFACER-80) to connect to the Model III bus. MOD III/I BUS CONVERTER, complete with all connectors, only \$39.95.

PRINTSWITCH

Have 2 printers on line at all times and select printer 1 or 2 by means of a conveniently located switch. End the problem of constantly plugging and unplugging printer cables. PRINT-SWITCH is a compact module that plugs into the parallel printer port of your TRS-80 and provides an edge connector for each of your two printers. It works with any two types of printers: dot matrix, daisy wheel, plotters, TRS-80 converted electrics, etc. Assembled, tested, ready to use with connector and instructions. For Model I or III (please specify) ONLY \$59.00

SUPERIOR QUALITY REPLACEMENT & EXTENSION CABLES

Highest quality cable and high force gold plated contacts ensure the utmost in connection reliability.

- 1 KEYBOARD TO EXPANSION INTERFACE \$21
 - 2 DISK DRIVE CABLE FOR 1 OR 2 DRIVES \$32
 - 3 DISK DRIVE CABLE FOR 3 OR 4 DRIVES \$45
 - 4 DISK DRIVE CABLE EXTENDER \$22
 - 5 PRINTER CABLE EXTENDER \$24
 - 6 40 PIN BUS EXTENDER - 2 ft. \$22 4 ft. \$24
- Custom cable configurations are also available. Call us.

YOU ASKED FOR IT... EXPANDBUS! X1 X2 X3 AND X4
CONNECT ALL YOUR TRS-80 DEVICES SIMULTANEOUSLY on the 40 pin TRS-80 bus. Any device that normally plugs into the keyboard edge connector will also plug into the EXPANDBUS. The X4 is shown with protective covers (included). The TRS-80 keyboard contains the bus drivers (74LS367) for up to 20 devices more than you will ever need. Using the E/I, it plugs either between KB and E/I or in the Screen Printer port. Professional quality gold plated contacts. Computer grade 40 conductor ribbon cable. X2 \$29 X3 \$44 X4 \$59 X5 \$74
Custom configurations are also available. Call us.

ANALOG-80: A WORLD OF NEW APPLICATIONS POSSIBLE

8 DIGITAL MULTIMETERS PLUGGED INTO YOUR TRS-80!!! Measure Temperature, Voltage, Current, Light, Pressure, etc. Very easy to use. For example: let's read input channel #4. IO DUT 0.4. Selects input #4 and also starts the conversion. 20 A = (AP0). Puts the result in variable A. Volts! Specifications: Input range: 0-5V to 0-500V. Each channel can be set to a different scale. Resolution: 20mV (on 5V range). Accuracy: 8 bits (1.5%). Port Address: jumper selectable. Plugs into keyboard bus or E/I (screen printer port). Assembled and tested. 90 day warranty. Complete with power supply, connector, manual. \$139.

TIMEDATE 80: REAL-TIME CLOCK/CALENDAR MODULE

Keeps quartz accurate time for 3 years on 2 replaceable AAA batteries (not included). Gives MO: DATE, YR, DAY of WEEK, HR, MIN, SEC and AM/PM. Features INTELLIGENT CALENDAR and even provides for Leap Year. This compact module simply plugs into rear of keyboard or side of Expansion Interface (may be slipped inside E/I). Includes cassette software for setting clock and patching to any DOS including NEWDOS 80 2.0. Optional Y connector allows for further expansion. For Model I fully assembled and tested. Complete with instructions and cassette. ONLY \$94.00. Y option add \$12.00.

GREEN SCREEN WARNING

IBM and all the biggies are using green screen monitors. Its advantages are now widely advertised. We feel that every TRS-80 user should enjoy the benefits it provides. But **WARNING** all Green Screens are not created equal. Here is what we found:

- Several are just a flat piece of standard colored Lucite. The green tint was not made for this purpose and is judged by many to be too dark. Increasing the brightness control will result in a fuzzy display.
- Some are simply a piece of thin plastic film taped onto a cardboard frame. The color is satisfactory but the wobbly film gives it a poor appearance.
- One optical filter is in fact plain acrylic sheeting.
- False claim: A few pretend to "reduce glare." In fact their flat and shiny surfaces (both film and Lucite type) ADD their own reflections to the screen.
- A few laughs: One ad claims to "reduce screen contrast." Sorry gentlemen but it's just the opposite. One of the Green Screen's major benefits is to increase the contrast between the text and the background.
- Drawbacks: Most are using adhesive strips to fasten their screen to the monitor. This method makes it awkward to remove for necessary periodical cleaning. All except ours are flat. Light pens will not work reliably because of the big gap between the screen and the tube.
- Many companies have been manufacturing video filters for years. We are not the first (some think they are), but we have done our homework and we think we manufacture the best Green Screen. Here is why:
- It fits right onto the picture tube like a skin because it is the only **CURVED** screen **MOLDED** exactly to the picture tube curvature. It is cut precisely to cover the exposed area of the picture tube. The fit is such that the static electricity is sufficient to keep it in place! We also include some invisible reusable tape for a more secure fastening.
- The filter material that we use is just right, not too dark, not too light. The result is a really eye pleasing display. We are so sure that you will never take your Green screen off that we offer an unconditional money back guarantee. Try our Green Screen for 14 days. If for any reason you are not delighted with it, return it for a prompt refund.
- A last word: We think that companies like ours who are selling mainly by mail should list their street address have a phone number for questions and orders, accept C.O.D.s, not every one likes to send checks to a P.O. box. The convenience of charging their purchase to major credit cards. How come we are the only green screen people doing it?

Order your ALPHA GREEN SCREEN today \$12.50

DISK DRIVE EXTENDER CABLE. FREE YOUR MINI-DRIVES.

End the daisy-chain mess once and for all. Fits all mini-drives: Percom, Aerocomp, Shugart, Micropolis, MTI, Vista, Perlec, Siemens, BASF. Easy to install: just remove the drive cover, plug in the EXTENDER CABLE and replace the cover. Now you can change and move your drives without disassembly. Keep the cover on and the dust out. High reliability gold plated contacts, computer grade 34 conductor cable. Tested and guaranteed.

Get one for each drive ONLY \$8.95

INTERFACER-80: the most powerful Sense/Control module

- 8 industrial grade relays: single pole double throw isolated contacts. 2 Amp @ 125 Volts. TTL latched outputs are also accessible to drive external solid state relays.
- 8 convenient LEDs constantly display the relay states.
- Simple "OUT" commands (in basic) control the 8 relays.
- 8 optically isolated inputs for easy direct interfacing to external switches, photoresistors, keyboards, sensors, etc.
- Simple "INP" commands read the status of the 8 inputs.
- Selectable port address. Clean, compact enclosed design. Assembled, tested. 90 days warranty. Price includes power supply, cable, connector, superb user's manual. \$159.

Design or Detail?

When I read the June cover, "Software Construction: How to Build a Better Program," I expected to find articles dealing with overall program design and structure. Instead I found articles whose emphasis was on low-level detail. I think your readers need to learn more about proper program design, not tricks and shortcuts. I'm afraid that by stressing these tricks, our new generation of programmers will be no better off than the pioneers of the 1950s.

The solution lies in weaning these people from Basic and Assembly languages; if any languages encourage bad programming practices, it is these two. I feel that no one should stay with Basic for more than a month. Give them that month and then force them on to higher-level languages. Advanced Basic programming is a myth. You should encourage articles with well-designed and well-implemented programs written in C, Pascal, Fortran, or Modula-2.

ERROR Trap

John Ratzlaff's Prometheus 5 Hard Disk System review (80 Micro, August 1983, p. 50) states that DOSPLUS 4.0 is included with the system at no extra charge. Since the review appeared, Computex has changed its policy. DOSPLUS 4.0 is no longer included with the system, but Prometheus 5's price has dropped from \$1,495 to \$1,295.

In 80 Micro's Buyer's Guide to CoCo Utilities (July 1983, p. 212) the address for A. M. Hearn Software was inadvertently omitted. It is 602 South 48th St., Philadelphia, PA 19143.

Micro-Design

Micro-Design offers a floppy disk system for the Model 1. It is a plug-compatible, 40-track, 5¼-inch disk drive. Its average access time (track-to-track and data-transfer rates) are the same as those listed by other manufacturers. These figures are derived by the manufacturer of the drive mechanism and change little from drive to drive.

For the Model 111 computer, Micro-Design offers three floppy disk systems:

the MDX-6A, MDX-6B, and MDX-6C. All three include the MDX-6 floppy disk controller that handles both 5¼- and 8-inch disk drives. They also include all hardware and cabling required for the internally mounted disk drives.

The difference between these systems lies in the disk drives supplied. The MDX-6A offers 40-track, single-sided, double-density 5¼-inch drives with a storage capacity of 250K. The first drive MDX-6A upgrade costs \$399, and the second internal drive \$189.95.

The MDX-6B upgrade offers 40-track, double-sided disk drives with a capacity of 500K. The first drive upgrade costs \$474, and the second \$274.

The MDX-6C upgrade system lets you add four internal slim-line disk drives. These 40-track, 5¼-inch, double-sided drives offer 500K of memory. Special added features ensure reliable, trouble-free operation. The first MDX-6C upgrade costs \$495, additional drives cost \$295. A total system offers the user 2 megabytes of unformatted, internally-mounted storage.

Micro-Design offers a one-year warranty, and a 24-hour repair or replace policy on all upgrades. All of these upgrades are compatible with the new Model 4, as well.

I Need a Patch

Can anyone tell me where I can obtain a patch program for lowercase characters that works with the Model I Electric Pencil cassette version?

*George Sanquenetti
1439 South 3rd St.
Clinton, IN 47842*

Model III Utility Needed

I need a utility for my Model III that lists the variables used in a program in one column and the line numbers as they appear in another. Can someone help me?

*Richard Compton
1635 Oramas Road
Santa Barbara, CA 93103*

Program to Print

I'm looking for a Model III program to print graphics (lettering, sketches, designs, and so forth) on an IDS 440G printer. Can someone advise me?

*Jan Lanoue
125 Irving St.
P.O. Box 2154
Framingham, MA 01701*

Looking for answers

Do You Know?

Does anyone know how to embed hexadecimal code in Color Scripts? One of our customers wants to receive ASCII text files via modem and typeset them without using the keyboard.

So far we have been unable to find any information on this accomplishment for the Color Computer.

*Harley L. Smith
Athol Daily News
225 Exchange St.
Athol, MA 01331*

Stumped with Pascal

I'm a reasonably capable Basic Programmer, but Pascal has me stumped. Is there a magazine, newsletter, or book for Alcor Pascal beginners?

Also, does anyone have source code programs that they would like to swap?

*Robert Athanasiou, M.D.
13 Lawnridge Ave.
Albany, NY 12208*

Losing Control

Can someone supply a patch that will allow me to change the Scriptsit control key?

*E.J. Jennings
299 Ridgewood Ave.
Glen Ridge, NJ 07028*

Expecting Too Much?

Our library is looking for a printer that is compatible with both the Model III and the Apple II Plus, that can handle card stock for library catalog cards, that prints in condensed format with extended lowercase letters, that is able to cut stencils, and that is capable of reversing to make second columns. Can someone help us?

*Diane D. Kester
Eastern Wayne Junior High
Route 10, Box 28
Goldsboro, NC 27530*

How?

How is it possible to reduce both amplitude and frequency through the cassette port? Also, what happened to EDF, and how can I acquire a copy of this program? If anyone has a copy of EDF I'm willing to pay photocopying and mailing costs for it.

*Rick Sayre
4922 Cozad Way
Stockton, CA 95212*

Back to School

Can someone tell me where I can get information on classes on the west coast for the TRS-80? I'm looking for a course that's two weeks long and that has hands-on use of the TRS-80 with instruction involving compatible software packages.

*Craig Horton
2352 Delta Waters Road
Medford, OR 97501*

Lend a Hand!

I have a Model I with a version G board. The level II ROMs are on a separate board and recently became disconnected from the ribbon cable. I need a diagram that shows what line goes to what hole on the circuit board. Can someone lend a helping hand?

*John Coleman
811 Piedmont Ave.
Atlanta, GA 30308*

Another Line

A line is missing in Program Listing 6 of Mare-Anne Jarvella's Model 100 article, "The Final Notice" (July 1983, p. 176). Insert the following line to make the program work: 60 H=0:F=0: C=0:T=0:RESTORE.—Eds.

Division Problems

Several lines need to be added to Adam Wells' program listing for "Math Countdown" (February 1983, p. 160). In order to divide, you need to add the following lines:

```
256 GOSUB 270:INPUT "Now, what would
you like to practice";Q:O
N Q GOSUB 285,510,580,645,690
645 CLS
646 PRINT@10*64+30,SH$
647 FORI=1TO10
648 PRINT@64*12+15,11-1
690 PRINT CHR$(28):END
```

—Eds.

"...diode CR2"?

We inadvertently left out part of the text to Richard Esposito's "40K Color Basic" article (May 1983, p. 212). The first sentence on p. 214 should read "You could install a switch in line with diode CR2." Sorry about that.—Eds.

put lines 260, 280, 300, 320, 350, 370, and 390. We apologize for these errors—Eds.

Don't Be Teed-Off!

I had trouble getting Michael Parks' "Tee-Off" program to run correctly (April 1983, p. 108). The program listing gets in trouble in a few places where it should be using single-precision arithmetic instead of integer arithmetic. To fix this problem, remove the DEFINT A-Z from line 10. Also, in Victor Albino's "Billy and the Electric Troll" (May 1983, p. 320), the second graphic in line 160 should be changed to read CHR\$(177).

William Eccles
5939 East Quartz Mountain Road
Scottsdale, AZ 85253

A Traveling Error

Beve Woodbury's Model 100 article, "Traveling Expenses" (July 1983, p. 171), contained several errors. The program listing to set up the travel expense file was omitted. It should read as follows:

```
10 OPEN"RAM:EXPFIL.DO"
FOROUTPUTASI
20 PRINT#1,"0"
30 CLOSE:END
```

You also have to make several changes to Program Listing 3. First, add line 190:

```
190 :F=0
```

Next, change line 420 to:

```
420 PRINT#2,Z;"",N;"",C;"",Y;"",X:
GOTO30
```

Finally, remove the semicolon after in-

A Debug on Debug

The weather forecast program written by Anthony Perri (Feedback Loop, January 1983, p. 400) is correct as originally published and should not be changed as per the May 1983 Debug letter from Rea Plowman (p. 26). For information from the author on how to correctly use this program, see this month's Feedback Loop.—Eds.

You can't write too many useful sub-

routines in the 8 bytes allowed for each restart; therefore, each restart address contains a jump instruction (JP) to another part of memory. In the TRS-80, all RSTs except RST 00 hex force a jump to a unique, 3-byte instruction near the beginning of low memory. In

How can this information help you? Well, you can use some restarts to simplify your own machine-language routines, and you can modify one to add an extra command to Basic.

RST 20 hex tests the type (integer, single, double, or string) of the current variable. It sets the status flags and loads a value into the A register to indicate the variable type. The variable

must have been previously moved to a special buffer in low memory.

RST 28 hex and RST 30 hex are reserved for use by DOS. RST 28 hex is generally used as a DOS request call (for example, a request for a specific DOS overlay). RST 30 hex loads and executes Debug.

RST 38 hex is the system entry point for all maskable interrupts. For one method of changing interrupt processing, see the article I wrote with Jean Durbin, "Computer Security with a Credit Card," *80 Micro*, March 1983, p. 74.

Using the Restarts

As an example of how to use restart vectors, this month's demonstration program defines a new Basic command, Frame, which creates a border of CHR\$(191)s around the video screen. Though not complete (this routine only works in the 64-character display mode and doesn't handle cursor placement), Frame demonstrates how you can write new command verbs.

The Frame routine is shown in Program Listing 1. The definition of Exit in line 200 is critical. The value shown is correct for Models 1 and III tape systems, for all versions of Model 1 TRSDOS and NEWDOS and for all Model III versions of TRSDOS. If you use a different DOS, go to Disk Basic and enter the following command:

? PEEK(&H4004); PEEK(&H4005)

If 120 and 29 appear, Exit is correct as it is. If different numbers appear, change the value of Exit in line 200 to match the current address in bytes 4004 and 4005 hex.

The key to defining a new Basic command verb is RST 10 hex. Basic starts execution of every statement at 1D5A hex with a RST 10 hex instruction. ROM address 10 hex is the instruction JP 4003 hex. Normally, 4003 hex contains the instruction JP 1D78 hex. Because 4003 hex is in RAM, you can change it to any value you like.

The Load portion of this month's routine (lines 220-250) alters the normal address at 4003 hex so every RST 10 hex instruction results in a jump to Frame. Since Load is only used during initialization, you can place it anywhere in memory. You don't need to protect it.

At line 350, a number of tests begin. First, the address on the top of the sack

Restart	Jump Address	Normal Function
RST 00 hex	(none)	System reset (identical to power on).
RST 08 hex	4000 hex	Compare value pointed to by HL to that immediately following the RST instruction.
RST 10 hex	4003 hex	Examine the next symbol pointed to by HL.
RST 18 hex	4006 hex	Compare DE to HL and set the zero and carry flags accordingly.
RST 20 hex	4009 hex	Test the type of the current variable.
RST 28 hex	400C hex	Reserved for DOS use—normally a DOS function call.
RST 30 hex	400F hex	Reserved for DOS use—normally for invoking Debug.
RST 38 hex	(varies)	Entry point for all maskable interrupts.

Table 1. The Restart patch points.

Reliable.

You can count on 3M diskettes. Day after day.

Just like the sun, you can rely on 3M diskettes every day. At 3M, reliability is built into every diskette. We've been in the computer media business for over 30 years. And we've never settled in. We're constantly improving and perfecting our product line, from computer tape and data cartridges to floppy disks.

3M diskettes are made at 3M. That way, we have complete control over the entire manufacturing process. And you can have complete confidence in the reliability of every 3M diskette you buy.

Look in the Yellow Pages under Computer Supplies and Parts for the 3M distributor nearest you. In Canada, write 3M Canada, Inc., London, Ontario. If it's worth remembering, it's worth 3M diskettes.

```

Program Listing 2. Demonstration of Frame routine.

is examined to find the return address after RST 10 hex execution. Numerous ROM, DOS, and Disk Basic routines use RST 10 hex. Let the Frame routine interface only if RST 10 hex is called from 1D5A hex (if the return address is 1D5B hex). If the return address is anything else, all registers except AF are restored, and control is returned to the normal RST 10 hex routine (lines 350-420).

Line 460 calls the ROM routine at 1D78 hex to get the next character in the current Basic line into the A register. Another test checks to see if that character is an F. If it isn't, control returns to Basic to interpret the line normally.

If an F is found at the beginning of the Basic statement, it can either be the first letter of Frame or part of a variable definition (for example, F=10). If it is a variable definition, or LET statement, the variable name is followed by =. Lines 540-630 perform a search for = occurring before the end of the statement. If it isn't found, control drops through to line 670.

The last series of tests starts at line 670. First, the pointer that Basic maintains to keep track of its location in the statement is incremented past the F of Frame. Then, four RST 08 hex instructions test for the correct spelling of Frame. If any test fails, a syntax error is reported and control returns to Basic's normal command level.

If all tests succeed, the HL registers are saved and control finally passes to line 810, where the actual frame around the screen is drawn. Finally, in line 890, the HL pointer is restored and corrected, and control returns to normal Basic operation.

You need to observe several precautions when defining new Basic commands:

- Until your program completes its preliminary tests, preserve all registers except AF. Several routines use RST 10 hex, some of which may expect certain values to be in certain registers.

- Error-trap the new command completely. Every possible syntax error should be accounted for and your program must be able to recover from program errors like syntax and type mismatch.

- The value returned in HL is critical. The normal RST 10 hex routine increments HL before it picks up the next character. Therefore, you should be sure that, when your new command has finished executing, HL points to the last character of the new command. Basic can then determine if the following character is an end-of-line marker (00 hex), a multiple statement separator (:), or something that causes a syntax error. The easiest way to preserve HL is to Push it on the stack when it points past the last character in your command, then Pop and Decrement it before returning to Basic.

Using Frame

Program Listing 2 demonstrates Frame in action. From either DOS READY or by using the System command, execute Frame. Then protect it in high memory (with a disk system, protect it before going to Basic). Finally, enter and run Listing 2.

If you have modified your DOS to include the Restore patch I explained in my June column (p. 24) Frame will not operate. Both routines use the RST 10 hex vector to change Basic. You will have to load Basic, then load Frame into protected high memory, and use Debug to set the correct address in 4004 hex and 4005 hex. Better yet, try Frame with an unmodified version of your DOS.

One final warning: If you write a new verb, make sure it doesn't contain any of Basic's reserved words. If it does, your command is stored in memory partly tokenized. For example, Store would be kept in memory as S T D3H E, because the Basic word Or is tokenized as 0D3 hex. Your computer manual contains a list of reserved words.

Mixing Languages on the Model 4

As soon as I am familiar with the Model 4, I will devote at least a part of a column to discussing which Model III techniques will work with the Model 4, which won't, and why. If any of you have specific suggestions or questions, pass them along and I'll try to answer them as soon as I can. In the meantime, I am looking forward to the excitement of exploring the possibilities and limitations of a new machine. ■

ARRANGER

100% Machine Language Disk Index Program for the TRS 80 Model I & III
Automatically recognizes ALL major DOS's!

The Arranger is a master index system that automatically records the names of your programs, what disks those programs are on and type of DOS. Features include:

- Automatic single and double density recognition
- Accepts 1 DOS, DOS+, TRSDOS, DBI DOS, NEWDOS 80, MUI TIDOS
- Works interchangeably with Model III, I double density
- Capacity of 250 disks, 44 filenames disk
- Quickly locates any amount of free granules
- Finds a program in less than 30 seconds!
- Alphabetizes 1500 filenames in 40 secs.!
- Option to sort by any extension (BAS, CMD, ???)
- Easily updates diskettes previously added with only 2 keystrokes
- Backup function built in
- Uses 1 to 4 drives, 35, 40 or 80 tracks
- Radio Shack doubler compatible

Requires 32k 1 disk minimum
JUST.....\$29.95

SOFTWARE

STANDARD MICROSYSTEMS

Microterm

A terminal program should support all the "bells & whistles" on a modem. Microterm supports auto-dial/answer modems like the Lynx, DC Hayes Smartmodem or Novation Smart/

AutoCats. Features preprogrammed dial & transmit, direct line transfer, 34K capture buffer and certified 2400 baud operation rate. Specify Model I or Model III when ordering.
Microterm..... \$79.88

STANDARD MICROSYSTEMS

DOSPlus 3.4

The preferred disk operating system for Model I or III. Features BASIC array sort, (multi-key, multi-array), active "OO", device routing, DOS command repeat, etc. Specify Model I or III, single or double track, 40 or 80 track drive.
(Mod I)..... \$89.88
(Mod III)..... \$69.88

PROSOFT

NewScript

Forget all those "evaluation" articles. **NewScript** is the best word processing software available, bar none. **NewScript** gives you proportional spacing, single and double width type, subscripts, superscripts, underlining, boldface, multiple pitches, full-screen editing, global search/replace, a customized "form" letter that creates its own mailing labels—exceptional performance. **NewScript** comes with detailed documentation and support from the authors. Specify Model I or III when ordering.
NewScript..... \$113.88
NewScript Options
Script-to-NewScript File Conversion Software..... \$37.88
Proportional Module..... \$48.88

CORNUCOPIA

Electric Webster

Electric Webster is a 50,000 word dictionary that features spell checking & a "browse" feature allowing you to choose spellings or to enter your own. Fully NewScript compatible.
Electric Webster..... \$134.88

Information/Orders:

(603) 881-9855

Orders Only:

(800) 343-0726

No Hidden Charges:

We pay UPS ground shipping on all our orders, and we never charge extra for credit cards. We accept COBs up to \$1000 & add a \$10 fee per order. We have a \$50 minimum order. Personal checks are cleared in 3 weeks. All our equipment is shipped with full manufacturer's warranty. We sell only what we are authorized to sell to insure full warranty support, & we're authorized for warranty work on a number of printers. We also offer extended warranty plans for many printers.

Sorry, we cannot accept open POs or extend credit/terms at these prices. APO and foreign orders are not accepted.

We prepared this ad in June, & prices do change, so call to verify them.

HIGH TECHNOLOGY AT AFFORDABLE PRICES

THE BOTTOM LINE

MILFORD, NH 03055-0423 □ TELEPHONE (603) 881-9855

I'll never make it as a businessman. I don't do well when confronted with a page full of numbers because I'm slow to spot trends or unusual relationships in numerical data.

However, I readily understand graphs. I'm much more comfortable when I see data plotted; then I can start to make decisions based on the information at hand.

My contribution to this month's business issue is a Color Computer graphics aid for comparing spending rates with budgetary limitations. The program incorporates ideas useful in other applications, makes good use of the CoCo's graphics capabilities, and fulfills a real need.

Suppose you have a budget that has to last for a given length of time. It could be a monthly household budget, a bank account to see a student through a school year, or (my own application) an annual budget for a research and development project.

As you spend the money, you need to know whether or not your funds will last through the time you originally planned.

At the least, you'll want to compare your spending rate to a constant rate that would deplete your resources precisely at the end of the budgeted time period.

You probably want to do more, though. How about using the computer to extrapolate your spending pattern to the end of the budget period, so you can see where your present spending habits lead you? This lets you visualize the effects of changing your spending rate.

I had such a program in mind when I set out to write Expgraph. It proved to be a happy experience: I have a program that meets my needs, and I've used a few favorite routines along the way.

Features of Expgraph

I designed Expgraph (see Program

Graphics for maintaining your budget

Listing) to take as much of the load off the user as possible while retaining a fair

amount of flexibility. The program prepares graphs using reports of dollars spent as of specified dates.

The data represents either period costs (how much you spent between April 1 and May 1) or cumulative costs (how much you spent between the first of the year and the end of January, February, and so on). I receive both kinds of reports in my own work.

In principle, you could graft Expgraph onto other programs; at the least, you could make it read other programs' data files. For this column's purposes, I've incorporated expense information as a cluster of data statements at the end of Expgraph.

As written, the program is equally at home with disk or cassette systems, but it does require Extended Color Basic.

Notice that I haven't entered the data (month, day, year, expenditure) in

Program Listing. Expgraph.

Extended Color Basic

CELEBRATE!

Actually Produced With CHROMAtrs.

CHROMAtrs™ MAKES IT HAPPEN

This powerful peripheral offers you 15 brilliant colors, lets you produce sensational effects the same day you plug it in! Easy-to-use "CHROMA BASIC" gives you 71 CHROMA COMMANDS to use in addition to regular BASIC. You can devise your own exciting games, plot points and lines, do 3-D rotations, translations, create a large range of sprite graphics, produce charts and graphs, and make great sound effects.

This is a quality product that can multiply the value of your TRS-80. Supplies are limited and prices subject to change. A word to the wise: Order TODAY!

HERE'S NEW LIFE FOR YOUR OLD TRS-80

MOD I &
MOD III

Now You Can Create
Spectacular Color Graphics...
Exciting Sound Effects...
Paddle & Joy Stick Game Action!

ONLY \$199!

(American Version. For European Version & accessories, see coupon below.)

CHROMAtrs™ Comes Complete With:

- 15 vivid colors
- High resolution graphics (256 x 192)
- 2 Atari joystick and paddle connectors
- 3-D animation using sprite graphics
- 16k display RAM
- Programmability in BASIC
- LOGO language subset on disk
- One complimentary game
- Easy-to understand operating manual
- Does not affect Radio-Shack warranty
- Money-back guarantee

chronological order. Expgraph contains a sorting routine that obviates this protocol.

Also, there is nothing magical about monthly data. The information could represent any interval; in fact, the intervals could vary for a single report. I did make one assumption, though: The budget period covers one year. This sets the scale for the graph's horizontal (time) axis.

The vertical axis is another story. I've enjoyed the opportunity this project has given me to dust off a few favorite sub-routines, including one that automatically scales graphs.

Remember the agonies of trying to fit data onto graph paper? It always seems to be divided into the wrong number of sections.

This program incorporates a routine to guarantee that the graph's major divisions represent usable numbers: multiples of two, five, or 10. Furthermore, the total budget figure (supplied by the user at run time) lands in the uppermost division. So whatever your data range, you always use the full video screen.

I formatted the graph using only those elements I find useful. The budget figure appears as a circle on the right edge of the plot, and a straight line connects it to the origin. This represents the constant spending rate that consumes all funds at the year's end. The program plots the user's data as smaller circles connected by straight line segments.

Two methods of extrapolation are available. Expgraph could calculate the average spending rate for the entire period your data covers and plot a straight line at that rate from the origin to the year's end.

You can also specify that the program continue the most recent rate (the rate you spent money in the last interval for which you have data). This alternative shows the effect of any recent changes in spending patterns.

The program does not restrict you to one of these methods. The keyboard polling routine lets you ask for both plots on the same graph, one after the other.

Dissecting the Code

The Program Listing contains a commented version of Expgraph. Stripped of the REMs, the program occupies a little less than 4K, so it's feasible to re-number it and incorporate it into a more

Julian equivalent for all dates of interest to the program (the program computes time intervals by subtracting Julian dates), so you might call it often. I wanted it near the beginning of the program to speed up execution, hence the jump.

The program uses the string variables in lines 200-250 to draw a dollar sign and to calibrate the scale for the final PMODE 4 graph. The techniques for drawing text on a high-resolution graphics screen are well known by now; these particular characters are from the set 1 defined in a previous article (*80 Micro*, Anniversary Issue 1983, p. 469).

Notice that the numerals (NR\$(1), and so on) are elements of an array. Expgraph doesn't need the other elements since it doesn't label every division of the graph, but this is a handy way to organize data. It makes life simpler when you call up the graphical equivalents of each digit in a number.

As far as the user is concerned, the program begins at line 300. That queer spacing in the text of the menu is necessary for an attractive screen display.

The program calls for only two pieces of information: the starting date for the year and the total budget. Enter the date as:

Month,Day,Year

comprehensive financial management package.

The REMs all have line numbers like 198 and 399, and are not referenced by GOTOs or other control transfers. Feel

free to delete them.

Expgraph is written in a fairly linear fashion, except for one odd move at the beginning: the jump around the routine at line 120. This routine calculates the

You need one or two digits for the month and day, and two for the year; the program adds the 1900. (Readers who expect to be concerned with the

THE COLOR KEY

21st century can modify line 120 when the need arises.)

Now the auto-scaling routine at line 370 takes over. This is a modification of a more general routine published in the December 15, 1981 issue of *Electronics* (p. 159).

I've simplified it by assuming that the graph shows only positive numbers. You start with zero expenditures and spend up toward your total budget.

The routine starts by trying to fit the budget figure onto a graph with 10 major divisions. If this requires the divisions to have unacceptable values (i.e., not one, two, or five times an integer power of 10), the program automatically adjusts.

The final graph might have an unusual number of divisions, but they will be a convenient size. The program plots the history of a \$775,000 project on an eight segment display, with every segment corresponding to \$100,000.

The variable C (line 420) is the dollar value associated with each major division of the graph; you need it later in the labelling routine. MX (line 460) is the maximum value you can show on the graph, and is equal to C times the number of major divisions.

I decided that the graph for Expgraph would be 184 positions wide and 150 high. The conversion between dollars and vertical coordinates on the screen is governed by a scale factor SF, equal to MX/150. The final variable in this routine is NI, the number of major vertical divisions.

The 184-position width provides a reasonable fit to a two days/position scale. If you want to use Expgraph for some other period of time, change this when you get to the plotting routine.

Once the program calculates the scaling factors, it moves to the second menu at line 500. This asks the user how to interpret the data.

To make a sensible graph, you have to know whether each piece of data represents the total money spent since the beginning of the year or since the end of the last reporting period. The selection variable MC is used in the plotting routine.

The user doesn't need to keep track of how many data points are to be plotted. The program checks in lines 560-600, and sets up a data array of the appropriate size. Note that a DATA 0 sets up a simple out-of-data test. If you use another technique, such as a disk file, to

supply information to Expgraph, you must modify this.

The data array B(K,J) is $N \times 2$ in size, where N is the number of data points. The first subscript ranges from 1 to N, while the second takes the values zero and 1. B(K,0) is the Kth Julian date, while B(K,1) is the corresponding expenditure figure.

Now the program reads the data statements a second time to add data to the array (lines 620-670). It calculates the Julian dates and puts the array in order using the Shell-Metzner sort in lines 700-810.

Ordinarily, financial data is available in chronological order, but you might not be able to enter a report in the proper sequence. Expgraph frees you from having to worry about this.

Lines 900-980 set up the outline of the graph, draw horizontal lines at the major divisions, and plot the budget figure and the straight line connecting it to the origin. Lines 1000-1070 plot the actual data points and connect them.

There isn't much to say about the plotting routine. It scales the Julian dates to the graph coordinate system in line 1010, and scales the financial figures in line 1030.

Variable names XK and YK are the same as B(K,0) and B(K,1), but I wanted to shorten the notation for some of the plotting instructions.

The graph is even more useful when the program calibrates the dollar scale in lines 1100-1190. The program finds the vertical position of the first major division line and converts it to a string in line 1100. Expgraph uses the string in a Draw command (line 1120) to locate a fiducial mark: a horizontal line segment with a down-pointing arrow.

Line 1110 draws the complementary line, complete with an up arrow, aligned with the lower edge of the graph. This sets up a gap one major division high, into which you write the dollar value of that division—\$1,000, \$50,000, or whatever. Line 1130 even draws the dollar sign.

Lines 1140-1190 convert the variable C to a string, analyze it one digit at a time, and draw the NR\$ variables corresponding to each digit. The Execute option of Extended Color Basic's Draw command comes into play here.

Line 1160 is necessary because Basic wants to lead off with a blank when converting a number to a string. Without it, the calibrations all start with

a leading zero.

With the zero suppressed, and with the screen coordinates I've chosen for the graph, you have enough room for a six-digit number plus the dollar sign. Expgraph can properly label a major division of up to \$500,000.

Now that the raw data is graphed, press the M key to get to the third menu for extrapolation options. The average-expenditure-rate method assumes that all reporting intervals are of equal length. At this level of accuracy, such an assumption isn't unreasonable if the reporting intervals are months of the year. You shouldn't use this method if you mix monthly and weekly data, though.

Should either extrapolation method indicate that you are headed for disaster, with anticipated expenses far in excess of your budget, the program gives you a warning message (lines 2000-2030) and throws you off.

Serves you right.

Final Thoughts

One word of warning: If you get into this type of graphics data presentation, be careful about the positive and negative signs of vertical distances on the screen.

The Color Computer uses an inverted coordinate system: The positive direction for vertical measurements is down. This causes me a few headaches whenever I start a new graphics project.

Expgraph has been a workhorse for me. I can't claim that the extrapolations are accurate to six significant figures, but they're good enough to tell me when a real budget problem is in the making—something I might not notice in columns of numbers.

Other users might want to spruce up the display a little. You might like to add a title, or vertical lines to indicate the end of each month or another reporting interval.

You might even want to add more labels to the dollar scale. Of course, if you do that you need a complete set of numerals for your draw statements. ■

Turn Your Color Computer into *SUPER* Computer

Color Computerists

HOT CoCo. The exciting new monthly magazine for the TRS-80 Color Computer*. It promises to transform your low-end machine into a high-resolution superstar.

HOT CoCo is the brainchild of Wayne Green, the publisher of *80 Micro*. The information in **HOT CoCo** is first rate with monthly columns and reviews that focus on valuable money-saving techniques. Time savers too! Plus problem solving articles on:

- Utilities—patching, aiding, troubleshooting
- Graphics—graphs and patterns
- Hardware—interfacing and enhancing
- Games—fun and strategy
- Programming techniques and tutorials
- Coverage of home use, business, communications and education applications

Best of all, **HOT CoCo** is written by users just like you. The material is always up-to-date and useful. Hardware, software, books... what's new... what's best... what works.

All this is yours for the affordably low subscription rate of \$24.97. With pre-payment (check or credit card), you'll receive

a 13th issue FREE! Use the attached order form, the coupon below, or call toll free 1-800-258-5473.

Turn your mild-mannered machine into a *SUPER* computer. Subscribe to **HOT CoCo** today.

YES! I want a subscription to **HOT CoCo** at \$24.97.

I understand that with payment enclosed or credit card order, I will receive a FREE issue making a total of 13 issues for \$24.97.

...Now Introducing
The PRODUCER, Jr.

(See Technical Specifications Card for more facts.)

Only **\$89.95**

If BASIC somehow doesn't seem so basic, and your software has been getting you nowhere, then let me introduce myself. **THE PRODUCER** is my name. Writing programs is my game. If you're interested in an inexpensive way to quickly and easily write professional quality custom software programs, then read on.

Have you ever wasted money on software that didn't do what you thought it would? Are you burned out on high priced, canned programs that make big claims, but don't meet your needs. Has a lack of good software made your computer an expensive gadget that doesn't do what you hoped it would? If so, I'm here with good news. With my help you can put those problems behind you.

What is THE PRODUCER?

In short, I'm a Program Generator designed to write customized software programs. If you have a need to store and retrieve information, perform calculations on your data and get displayed or printed reports, I can help you develop a program to do just that, in just about any format you can imagine. That's why I'm called a program development system. I'm a powerful and sophisticated software package, born of vast technical knowledge and professional design experience. Yet, I'm the most simple, practical, easy to use and functionally versatile program generator ever put on the market.

What can THE PRODUCER do for you?

How can I help you? Just let me count the ways.

1. I make programming easy. I'm 'user friendly.' If you can answer simple English questions and push buttons, I'll do all the hard work. Let me worry about the BASIC language required to complete your program. Describe the program you want and I'll write it for you. The process is simple. First, I produce a printed planning sheet to help you get your ideas on paper. When you've finished planning, you're ready to draw your screen right on the monitor. The Screen design and appearance is completely at your command, including graphics. You have full editorial control. Make all the changes you like, until you're satisfied. After you're thru, I'll guide you thru some simple English questions about your Screen. Based on your answers, I'll write a complete BASIC program for you.

2. I can save you 100's of hours of time. I provide real short cuts to meet your needs by going direct from your idea to a 'ready to use' customized program. I write all the BASIC code for you. I'm simple, but I'm not shallow. The only limit to my capacity is your imagination.

3. I can save you big bucks. You may never need to buy another program to store and retrieve your data. With my help, you can design your own custom programs to get your job done.

4. I can help make you more productive. Having me as your partner will be like taking a smart pill. I'll pay for myself many times over by increasing your productivity and creativity. With my custom programs serving you, your computer will be the valuable friend you hoped it would be.

5. I can help make you a real pro. Based on your ideas, I write complete stand alone programs. I write in BASIC code, but you talk in English to me. And if you're an entrepreneur, you can sell the programs you and I create. As a licensed owner of THE PRODUCER, you may do so without paying royalties.

6. I can make good programmers much better. I produce fully commented BASIC code so you can use me as a building block to write your own specialized software. I have the best screen and input module available anywhere at any price.

PRODUCER Generated Programs

We understand your reluctance to invest in THE PRODUCER until you know for sure it provides what we say it does. The programs below are unmodified, finished programs generated by THE PRODUCER. Our customers tell us that PRODUCER generated programs are better than many high priced programs written by human professionals. Compare these programs to any you have seen selling at a similar price. Their quality will surprise you. Buy any of these PRODUCER generated programs now and we will gladly apply the cost of that program toward the future purchase of THE PRODUCER. Or buy THE PRODUCER now and select one of the PRODUCER generated programs to be included in your order, absolutely FREE.

The PRODUCER, JR.

If you don't need all the features of The PRODUCER--the professional program writer, and you don't want to spend \$149.95 on software, READ ON. Producer Software has the perfect solution for you.

THE PRODUCER, JR.

A SIMPLE TO USE professional program generator. And it's only \$89.95. This self documented program generator can have anyone creating self-contained, stand alone programs in no time at all. No other program generator can provide you with ease of use, low price and quality.

FEATURES

- screen generator allows easy definition and creation of fields
- B-tree file lets you search, insert, delete and edit
- reports by single restriction (no sort)
- much more (see technical comparison chart)

The PRODUCER, Jr. comes to you complete with all the above features and its own operating system for only \$89.95. But don't let this low price fool you--The PRODUCER, Jr. is still the most powerful program generator on the market today with the exception of the original PRODUCER. And The PRODUCER, JR. is completely compatible to the original PRODUCER so if you decide to upgrade at a later date you may do so for only \$75.00. So don't miss out. Order today.

For an independent product review of the PRODUCER see page 62 of March issue of 80 Micro.

Photo 1. The MC-10.

★ ½

Model MC-10 Micro Color Computer
Tandy/Radio Shack
One Tandy Center
Fort Worth, TX 76102
\$119.95

by Beve Woodbury

Radio Shack's new MC-10 Micro Color Computer is a good computer on which neophyte users can learn Basic programming. It's reasonably priced, fairly versatile, and accepts Basic commands from a single keystroke. But its versatility is limited by a small (4K) memory capacity and a lack

of software.

The MC-10 is aimed at the low-end market currently dominated by the Timex-Sinclair 1000 and the VIC-20. Each computer has advantages and disadvantages, but the MC-10 comes out last in my opinion.

Physical Description

The MC-10 has an ivory case. It's 2 inches high by 8½ inches long by 7 inches wide, and weighs a little under 2 pounds (see Photo 1). It generates eight colors on a 32-character by 16-line display. You can display text and graphics on the same screen.

This computer has a cassette recorder port (see Photo 2), an RS-232C port for

Our reviewers use a five-star rating system. One star represents the low end of this spectrum, while five stars represent the spectacular and high end of the spectrum.

a printer or telephone modem, and a port for inserting an optional 16K RAM module. It doesn't have a port for joysticks or EPROMs.

The MC-10 comes with an antenna switch that connects to a TV, the connecting cable, a manual, a quick reference card, and a bulky, heavy power supply you must use to connect the computer with a wall outlet.

According to Tandy, the keyboard is "standard typewriter style." The keyboard letter/number format is standard, but the keys are the small chiclet style that would horrify any touch typist.

The keys are well labelled. Regular and special characters are identified on each key, and Basic commands appear on the panel above the key. You access special characters, such as the 16 graphics characters, by simultaneously pressing the shift key and the character key.

You access Basic commands by simultaneously pressing the control key and the key associated with the desired command. The control key is in the lower left corner, and the shift key is in the lower right corner. The enter key

Photo 2. A rear view of the MC-10.

and the break key are also on the far right of the keyboard.

I was immediately ready to dislike the keyboard, but the more I used it in programming, the more I liked it. It is definitely a one-hand keyboard. All but the smallest of hands can span it to press the shift or control key and any other key.

This leaves one hand free to follow any text you're copying. The MC-10's size could be a great advantage to anyone handicapped by the use of only one hand.

Once I became familiar with the keyboard, I could type in a program much more quickly than usual. Each Basic command requires only one keystroke, thus eliminating typos in the command words.

You don't need to type CHR\$(n) for graphics, although the command is available. The background color of the graphics character is determined by the color of the cursor when you press the shift and graphics keys.

Change the color of the cursor by pressing control and the zero key. The color changes each time you press the keys, cycling through the full range of colors. These three options greatly reduce programming and debugging time.

Several keys have special functions when you use them with the control key. The Q key deletes the current program line. The A key erases by backspacing. The W key produces exponentiation. The S and Z keys are "reserved for special purposes" that Tandy has yet to define.

The shift key with the @ key pauses a program. The shift key with the zero key switches the keyboard between upper- and lowercase modes.

Lowercase letters don't appear on the screen. The MC-10 prints lowercase letters in reverse video: green letters on black background. They should appear on a printout, but I couldn't test the printing capabilities as I don't have access to a serial printer.

The reset button on the back of the computer clears the screen or gets you out of a hang up while retaining the program and variables in memory.

The MC-10 can also generate music, or noise, depending on the listener's perspective. The lowest musical note is approximately the E below middle C, moving up 255 tones to the very high tones. This sound capability could be useful in detecting early high-sound hearing disabilities.

Like the machine, the manual is compact and easy to understand. The information is presented in a factual, instructive manner without all the cartoon features of the CoCo manuals. The documentation has a good table of contents, but no alphabetical index to help locate specific information.

A novice can start at the beginning of the manual setting up the computer and its accessories, then progress smoothly to programming. The Basic commands appear in logical order, starting with Print commands and ending with mathematical functions. The explanations are detailed, and include sample program lines and simple programs.

Evaluation

The MC-10's portability is definitely an asset. You can use it wherever you

*"The MC-10 is useful
for learning Basic,
but it does have
many disadvantages."*

have access to a television. My teenage users commented that it would easily fit into their book bags.

If you plan to connect your MC-10 to a motel television, be sure to check with management first. Many motels have silent alarms connected to their television cables.

The MC-10 is useful for learning Basic, but it does have many disadvantages.

The lack of automatic line numbering slows program entry, and no edit mode exists to aid debugging. This is frustrating when you make a typing error at the end of a long line. You have to retype the entire line, possibly creating more typing errors.

The MC-10 has no means of using files. This severely limits programming use. The closest you can get is to use an array as a file. You can set up an array in a program with string or numeric characters.

You can save an array of numeric characters on tape using the CSAVE* command, then load it back for future use with the CLOAD* command. This lets you simulate data files limited to numeric data.

Even if file input/output becomes available, it would be difficult to use the MC-10 for any application that requires keyboard input. One-handed data entry on a miniature keyboard is difficult and error-inducing.

The computer has no Else command, and program line length is limited to 127 characters.

Also, the MC-10 doesn't control the motor (start/stop) on the cassette recorder. You must manually turn the recorder on and off.

All these disadvantages are probably due to the limitations of MC-10 memory size. I expect Tandy to come out with an Extended Basic add-on that will include automatic line numbering, the Else command, cassette motor control, and expanded graphics commands such as Line, Print, and Paint.

It would be beneficial if you could use CoCo program tapes on the MC-10 and vice versa. However, the CoCo runs on a 6809 ROM chip and the MC-10 runs on a 6803 ROM chip. These two chips require different Basic command tokens.

(A Basic command is tokenized in memory so it fits in 1 byte of memory, regardless of the command's length. Of and Restore each occupy 1 byte.)

The MC-10 loads a tape written on the CoCo and vice versa, but the different command tokens produce strange programs. For example, Print on the MC-10 becomes Data on the CoCo, and Next becomes End.

All things considered, the MC-10 is up against some stiff competition. You can purchase the 1K Timex-Sinclair 1000 with a 16K RAM add-on for approximately the same price as the 4K MC-10. And the Timex-Sinclair accepts 63 one-keystroke commands and generates 20 graphics characters.

I prefer the real keys on the MC-10 to the membrane keys on the Timex-Sinclair 1000 and I think the MC-10 has a clearer manual. The Timex-Sinclair 1000 doesn't have color, but you can program it in Assembly language.

The larger memory (at the same price) and the ability to use Assembly language give the Timex-Sinclair 1000 a decided advantage if you're willing to

sacrifice color and real keys. Both are primarily learning computers and have limited expansion capability.

The 5K Commodore VIC-20 is close to the MC-10. I've seen it for \$159.95, but know it's been on sale for under \$100. The VIC-20 isn't as portable; it's about three times the size of the MC-10 and has a heavy power supply unit.

The added size provides room for expansion. In addition to cassette and serial ports, the VIC-20 has a joystick port, a cartridge port, and a port for special accessories. You can use the serial port for a printer or a disk drive. You can also expand memory to 32K.

The VIC-20 has a true typewriter-style keyboard with access to 60 graphics characters and eight colors. Upper- and lowercase letters appear on the screen.

You can also choose from 16 screen colors, eight border colors, and eight graphics colors. Even letters can appear in one of eight colors. The VIC-20 has high-resolution graphics and each pixel is separately programmable.

One-keystroke Basic commands are not available on the VIC-20. This makes program typing more difficult and time consuming, but the real keys make data entry much easier. File input/output is available, so the VIC-20 is a more practical computer for data handling or business use than the MC-10.

The screen display is 22 characters wide by 23 lines long. This causes the characters to appear spread out and distorted. I found text displays quite unpleasant and difficult to read on the screen.

Rumor has it that the Timex-Sinclair 2000, the U.S. version of the English Spectrum, will be released in October. If it's really like the Spectrum and sells for under \$200, it might be worth considering.

The Spectrum is a color computer with high-resolution graphics and 16K RAM. The screen display is 32 characters wide by 24 lines long. The keyboard is almost standard-size with chiclet-style keys.

You can enter Basic commands and graphics with one keystroke. The Spec-

trum is expandable to 48K RAM, and disk drives and printers are available for it.

Perhaps some of Tandy's products for the MC-10 will help make it more competitive with the other low-end computers. As I write this review, Tandy is advertising games and personal time saver programs from a library of ready-to-run MC-10 cassette software. They are also touting a \$49.95 16K RAM add-on.

Unfortunately, advertising has preceded availability, and Radio Shack Computer Centers aren't sure when they'll have the software or expansion RAM. These products might be available by the time you read this article. I'm hoping that Tandy will soon offer telecommunication software (which will require the purchase of a modem) and Extended Basic.

The MC-10 is a good, compact, portable computer severely limited by its 4K size. You should evaluate future expansion capability and cost, as well as the competition, before rushing out to

Gold Plug - 80

TRS - 80 - MOD I, MOD III, COCO

A hhhh, instant relief! At last there is a permanent cure for contact oxidation on Model I edge connectors. Many TRS-80 users are familiar with the symptoms: untimely resets, spontaneous reboots, or the inability to get the computer started at all without a frustrating session with a pink eraser.

The Gold Plug 80 is a well made device consisting of an edge-card plug with gold plated contacts, available with either 34 or 40 contacts. The rear of the plug has ter-

minal tabs which fit exactly over the existing foil fingers on the TRS-80's connectors. After installation, the original plugs have been extended about a half inch, meaning that the plastic door covers no longer fit. This did not trouble me, but you should take it into consideration. E.A.P.'s advertising leaflet, by the way, cautions you about the doors, which is refreshing. They also have the excellent policy of permitting you to return any plugs ordered for a refund if after seeing them you are un-

willing to undertake the installation.

An excellent set of instructions accompany the plugs, and they are shipped promptly. I ordered mine by mail on a Monday and received my set of plugs by first class mail on Tuesday of the next week.

Installation

Installation requires a soldering iron (I use a 40-watt Weller), Rosin-core solder, a Phillips screwdriver, and your last Pink Pearl. The keyboard and Expansion Interface have to be disassembled to get at the connectors, which are then cleaned—the eraser's last fling. The Gold Plug 80 is fitted over the existing plug with the contacts centered, and then soldered to the board. I have some soldering experience, but it proved to be an easy, safe job. The contact is heated, a very small amount of solder applied, and then you go on to the next contact. It took about an hour to do all six plugs.

MC/VISA

purchase one.

If a beginner becomes really interested, he'll quickly outgrow the MC-10's capabilities. He'll have to de-

cide whether to purchase a new computer that can grow with his interest, or whether the MC-10 will satisfy him and at what cost.

On the other hand, if the beginner who buys an MC-10 finds no lasting interest in computers, he won't be out several hundred dollars. ■

Liberator
John Crane
Computer Shack
1691 Eason
Pontiac, MI 48054
Model I, III, and 4
\$19.95 cassette
\$24.95 disk

by Michael E. Nadeau

Yes, this is another Donkey Kong clone. But if Donkey Kong is your game, Liberator is the best of the lot for the Models I, III, and 4.

The game's plot pits you, a "brilliant scientist," against your own robot,

which has gone haywire. You must work your way through an industrial complex where the robot is holding your helpers captive.

You climb ladders, hop elevators, jump barrels, and dodge drone robots in the attempt, at speeds fast enough to keep you on your toes, but not so slow that you easily master the game. You'll find it difficult to predict the frequency of the rolling barrels and movements of the drones; this adds to the game's challenge.

Liberator has five different screens and a total of four captive helpers. (You guessed it; they are young, helpless, and female. On the TRS-80, though, they look more like young, helpless fire hydrants. Computer Shack should have left the sex of the helpers up to the game

player; after all, women play arcade games, too.)

On too many games that involve moving a player up and down ladders it's difficult to get the player properly aligned on the ladders. This is frustrating. With Liberator, I found it quite easy to get the player to move as I wished.

You control your player's direction with the arrow keys and make him jump with the space bar—a comfortable arrangement. The program permanently stores the top 10 scores, and the same disk boots on the Models I, III, and 4.

Liberator's documentation is brief and adequate. And, as usual with Computer Shack programs, the package is professionally presented with striking artwork.

REVIEWS

My only complaint about *Liberator* is that the difficulty level doesn't seem to increase with your score. Computer Shack ads claim that the game has 20 levels of play, but my copy doesn't seem to have this feature.

Computer Shack might be referring to the sequence of the five screens. Each screen differs in complexity. The different screens seem to appear randomly

at first, but the ratio of difficult to easy screens increases as your score gets higher.

Even without increasing the level of difficulty, *Liberator* still presents a challenge each time you play it. With the price of arcade-style games so high, their staying power is an important consideration that makes *Liberator* a good value. ■

BASIC Programming for the Classroom Teacher

Joan M. Miller, Ruth King Chaya, and Debra J. Santora
Teachers College Press
1234 Amsterdam Ave.
New York, NY 10027
\$15.95

by Mary Gasiorowski

These new books for beginners address two different audiences: children and teachers. They are not self-teaching books. Their emphasis is on programming, and they provide only one part of a complete training in computer literacy.

You could easily use these books in an elementary or middle school class for computer programming. *Computer Programming* offers basic training for kids, and *BASIC Programming* prepares the teachers.

Computer Programming

Computer Programming is designed for home use; it's a good resource for the whole family, and especially for children. It is printed in large, easy-to-read type.

In general, the book progresses from easy to more complex material. *Computer Programming* explains computer

components (keyboard, CPU, ROM, RAM, screen), some special keys (enter, shift, clear, left arrow, break), and gets right into programming and graphics.

Computer Programming also has some exercises designed as classroom lessons. It gives you a program to try, usually asks a question about the result, and often encourages you to experiment further.

This is not a true self-teaching book. Adults should go over the material with children. For example, the instructions to turn on the computer are technical and perhaps scary—multiple pages of large type with very few pictures to depict what is happening.

Computer Programming implies many concepts without fully explaining them. It explains that a computer has two types of memory, RAM and ROM, but not why. More diagrams would help clarify the coordinate system for graphics.

This book has lots of examples illustrating some of the finer points of programming. It occasionally requires that the student draw or write the result of the program example. This reinforces comprehension, but the book, or the adult working with the student, needs to do this much more often.

Computer Programming has many good points: It's easy to read and laid out well. It's interesting and fun, and it teaches elementary programming. You should read it in front of a computer, where you can try the examples.

And you shouldn't read the book alone. In fact, the author suggests you read it "with a friend," preferably an adult who can answer questions and offer suggestions on programming problems.

BASIC Programming

BASIC Programming is written by teachers for teachers. In a nontechnical way, it explains Basic commands and

"THE RESULTS ARE IMPRESSIVE..."

—Dennis Nilsen, 80 Microcomputing, 12/82

Langley-St. Clair's* **Soft-View™** Replacement CRT's eliminates the strobe, flicker and fatigue from TRS-80's.*

Now you can upgrade your monitor with the new medium persistence green or amber phosphor tube.

State-of-the-art systems such as IBM™ and Apple III™ do not use the less costly "F4" BEW display tube because it is actually intended for TV viewing and its rapid strobes (60 times per second) cause irritating eye fatigue.

No amount of "green plastic" will solve this problem. But the new **Soft-View** CRT display tube from Langley-St. Clair will.

- Available in slow decay Green or medium decay "European Amber" (the standard in Europe)
- Made with Lead/Strontium impregnated glass that stops X-ray emission.
- Of high-contrast face glass that also stops most U.V. radiation.
- Available in frosted glass with extra Anti-Glare benefits.
- Easily installed... comes with pre-mounted hardware.
- Warranted for one full year against manufacturing defects or tube failure.
- The finest quality double-dark glass phosphor fields to produce dramatic contrast.
- Ideal for Word Processing and Programming, yet fast enough for Games and Graphics.

LSIS **Soft-View™** CRT's

□ 15"GH42 Green Phosphor	\$79.95
□ 15"GH42G Green Phosphor w/ Anti-Glare	\$89.95
□ 15"R34 Amber Phosphor	\$89.95
□ 15"R34G Amber Phosphor w/ Anti-Glare	\$99.95
also available:	
□ 15"Z27 Red Phosphor w/ Anti-Glare	\$139.95
□ 15"Z27G Blue Phosphor w/ Anti-Glare	\$139.95

Plus \$7.00 for packing and UPS shipping.
\$12.00 for Overseas Parcel Post or UPS Blue Label.
Add Sales Tax where applicable.

writing programs. It provides nonmath examples, so it's a good book for teachers in all disciplines.

The material in this book is derived from the authors' experiences giving in-service teacher workshops. It is designed for such workshops, rather than for at-home reading.

BASIC Programming accompanies the TRS-80, Apple, and Commodore PET computer systems with information and examples for all three. It is not intended to replace the manuals that come with the systems, however.

BASIC Programming introduces a command, gives an explanation and examples, and offers exercises to develop a clear concept of the command. It also provides answers to all the exercises, a glossary, a bibliography, and an extensive index. In addition, the authors have suggestions for using programming in the classroom.

The authors provide good descriptions of the various Basic commands, especially some of the more difficult concepts such as RND, ON-GOSUB and MID\$. The examples are better than average. The exercises are thought provoking, and you should work them out at a computer.

In fact, you should study the whole book at the computer. Many of the examples don't show the result of the program, so if you have no computer available and you're not familiar with the result of the commands, you might find the discussions following the examples obscure.

The later chapters introduce some fairly complex programs. One chapter details a program to test for parts of speech in a language-arts lesson. Another chapter sets up a phonics quiz.

New commands and concepts are introduced in the last four chapters, but the exercises at the end of each chapter do not start simple and gradually become more difficult; they are all fairly complex. This could be a problem for

beginners who need straightforward exercises to better understand a new command.

If you are a beginner and must choose only one book to read, this might not be the best one. For a real beginner, the comment in the first chapter, "your instructor, or the manual will . . .," is not very helpful.

References to the enter/return key imply that one such key exists. Those who have used a variety of microcomputers know that some label the carriage-return key "enter" and others call it "return," but this might be confusing to a beginner.

Another confusing aspect of *BASIC Programming* is the authors' desire to provide information for several brands of computers. Some Basic commands are different from computer to computer.

If a school has several different types of computers, it's great to find information applicable to each in one book. But if your school has only one type of computer, perhaps you should look for a book for beginners based on your computer.

In the preface, the authors express the hope that this book will help in-service and pre-service training for teaching effective classroom computer use. That is the best use for *BASIC Programming*. An experienced and knowledgeable instructor would talk through the material, answer questions, and provide more examples.

BASIC Programming for the Classroom Teacher is a quality reference and instruction book. It's a good book for a school to have, a better book for several teachers to work on together, and a very good book for teacher in-service training.

I give *BASIC Programming* two ratings: three stars for general school and teacher use, and four stars for specific use in teacher-training workshops. ■

The Executive Calculator
MCS Software
809 Parkway
Conway, AR 72032
Models I and III
One disk, 48K
\$39.95

by Michael W. Ecker

The Executive Calculator is a collection of over 150 business- and consumer-oriented programs.

A calculator could handle many of the smaller programs included here, and someone with a solid background in elementary mathematics and program-

Shape your TRS-80 to communicate with any computer you want.

Omniterm is the most flexible, powerful terminal program you can buy. Omniterm lets you adapt your TRS-80 to communicate with 99.9% of the world's computers. Your company's mainframe, for example. Or any other personal computer, time-sharing computer, or communications service.

Omniterm overcomes incompatibilities in screen formats, baud rates, character sets, control codes and file transfer protocols. Seven complete translation tables let you change any character, for complete compatibility of all input and output devices. Omniterm is so flexible, users have even set up their ASCII-coded systems to communicate with EBCDIC-coded systems.

You can send all ASCII characters, even those that aren't on your keyboard. Reformat your screen to neatly accommodate any line length. Run your printer while you're sending or receiving data. And even review data that's scrolled off the top of the screen.

Omniterm's well-thought-out design makes it easy to use. You can get a status display of all functions while on line to tell you what's going on, and make any changes at the same time. You can create a special file of your settings to make it easier next time. You also get X/Y cursor control, single keystroke sign-on and auto-dialing. Even a phone directory. And lots more.

You don't have to be a computer expert to use Omniterm. Just spend a day with what the reviewers call "the best manual in the business." Then if you need help, just call, write, or contact us via CompuServe, Delphi, or Source.

Omniterm is the proven terminal program. The program thousands of people have used successfully. And the one the editors call the "top program available" (Byte, 80-Micro, Infoworld, etc.)

Omniterm comes complete with sample setting files, conversion utilities, a practical text editor, seven translation tables, and a 76-page manual with index.

Available at leading dealers, or prompt shipment on direct phone and mail orders. Order Omniterm, for a super-smart TRS-80 that's putty in your hands.

- Only \$95 for TRS-80 Models I, III or 4 (32K memory, one disk minimum). \$175 for Models II, 12 or 16 (64K memory minimum). (In Mass., add 5% sales tax.) MasterCard, VISA, and C.O.D.

and hold keys are not disabled.

Skydiver

From your block-figure airplane, you eject the skydiver by pressing the space bar. Open his parachute the same way. The object is to land on target. You set plane speed, wind speed, and target area.

The plane always travels horizontally, but its altitude varies with each run. When the chute opens, wind speed affects the diver's lateral movement. At high wind speeds, wraparound is disconcerting since it might take the diver through two complete passes of the screen.

If your diver plummets to earth with his chute unopened, a reasonable representation of a helicopter rescues him, the game ends, and you are unceremoniously dumped to the Basic ready prompt. Otherwise, entering new parameters or pressing the enter key to retain the same limits restarts the game.

A few random catastrophes (e.g., a chute failing to open) are thrown in for good measure. With the plane at its highest speed and a maximum wind velocity, an illegal function call appears on some runs. This doesn't impair the game at other settings.

The remaining games require a bit more digital dexterity in using the space bar and the enter key. The last three games add the greater than (>) and less than (<) signs and repeat key for sideways movement. The slow response time when you repeatedly press a key is frustrating. Background graphics do not vary during any game.

Star Battle

In Star Battle, you're a fighter pilot protecting a base unimaginatively represented by a plus sign (+) at center screen. You can fire lasers horizontally along the center row as various enemies fly up to and then across that row to attack the base.

Your limited number of annihilator bombs (triggered by the enter key) let you eliminate attackers anywhere on the screen, especially from below where your lasers aren't effective. Star-studded galaxies roll up the screen between attacking waves, a nice touch.

An error terminates the game prematurely at some higher levels of difficulty.

The Wall

The Wall descends on your spaceship as you try to blast holes through to a

stationary enemy space station. You lose if the wall squashes you, if you blast an embedded mine, or if one of two types of randomly appearing flying juggernauts clobbers you.

Your approach speed increases with each successive pass of The Wall, and later stages include horizontal as well as vertical movement.

Space Swarm

Ten differently shaped antagonists chase you in Space Swarm. Some are capable of diagonal movement and others are armed with a series of line-segment energy rays. All the games give points for destroyed aliens, but Swarm offers intriguing varieties and requires quicker reactions than the previous games.

If you fire at an attacker but his missile reaches you first, you lose. You don't get credit for zapping the enemy. You'll probably find Swarm the most challenging and fascinating of the five games.

Mayhem

Mayhem pits your single missile silo against a lone bomber in one variation, or four types of destructive mechanisms in the other. They're out to obliterate four cities whose names you enter.

A direct hit on a city produces a small mushroom cloud, but when your missile silo blows or you lose all your cities, the nuclear blast fills most of the screen. The scoring mechanism appears to have a bug; it rolls back to zero on several occasions.

Mayhem is the only game in which you can fire missiles at angles other than vertical.

I wouldn't put TRSDOS and Basic on the distribution disk, or run the distribution disk in your second drive as described in the manual. Instead, I suggest making the usual back-up copies since the disk isn't protected.

The games don't contain explanation frames, so read the adequate instructions before embarking on your adventures.

The games are all variations on tried and true themes. After all, the Model II character generator is not intended for detailed graphics, and Basic puts a damper on speed. Presumably, Maryland will rectify the problems by the time this review is published.

If you must have games for your Model II in spite of its infirmities, the disk from Maryland Games is not exorbitantly priced, the games are quickly and easily learned, and they'll keep game addicts occupied. ■

★ ★ ½

The Genie in the Computer

Rachel Kohl, Laura Karp, Ethan Signer
John Wiley & Sons
New York, NY
\$12.95

by Richard Ramella

The idea behind *The Genie in the Computer* is learning TRS-80 Level II Basic through graphics. And the graphics, though simple, give quick results that illustrate simple programming techniques for the neophyte computer user.

The genie of the title is a graphics face that begins as a few X's on the screen, but becomes more complex as the book progresses. The genie transforms into various guises and activities as the reader's programming capabilities become more sophisticated.

This book is a good idea. Standard

texts that come with computers often fail to explain all the unit's capabilities. This book contains a lot of mildly interesting ideas and a few examples that will enlighten you. However, do not expect sophisticated graphics.

Chapter One sets the book's tone by presenting the genie's first face: two X's for eyes and three for a mouth. This elementary drawing explains line sequence in Basic.

The chapters continue to add other simple facial features in a kind of typewriter art on the screen. This is effective because the authors patiently explain the purpose of each line in the short programs.

Genie will help any beginner, and even barely literate children, start computing. Kids will probably forego the detailed instructions and simply type in the painlessly short programs. Even this is a useful introduction to Basic programming. ■

ming techniques could write them. However, the total package is impressive and covers a wide variety of financial questions.

The Executive Calculator performs the types of calculations listed in the main menu: pricing and profit, interest calculations, depreciation techniques, real estate formulas, lease calculations, graphs and charts, personal loans, financial decision making, equivalents and conversions, and miscellaneous calculations.

The Model I version comes on cassette. You have to transfer the nearly one dozen modules to disk. The Model III version is already on disk.

The programs themselves, although nominally in Basic, are invisible. You can display them from your directory only by specifying invisible files (use DIR (INV) or DIR (SYS, INV)). Consequently, they're difficult to modify.

The manual is an 85-page user's guide on saddle-stitched, colored paper. It is fairly well done, has few errors, is easy to read, and comes with program examples. In general, the programs are so straightforward I didn't have to consult the manual.

The loading instructions are simple, although you invoke an unusual Copy routine to reproduce the Model III disk on one of your system disks. The directions show you a permanent patch to TRSDOS that bypasses the initial date and time prompts and automatically loads The Executive Calculator.

Program Format

The programs are arranged in a main menu with submenus for each entry. The user's guide illustrates each of these, so you should first read the manual to avoid confusion.

You must select one of the main menu entries to access a submenu. After each calculation, the program prompts "Enter 'A' for Again, 'X' to return to Main Menu...?" This is a nice feature that eases program use. I found that you can also figure another calculation by hitting the enter key.

Speaking of shortcuts, an INKEY\$ routine, instead of the Executive Calculator Input routine, would allow quicker, one-key responses to program prompts.

Calculations

I found most of the programs to be mathematically accurate. The loan

amortization program produces exactly the same results as one I wrote. The same is true of the interest calculations. I don't think that anyone need worry about The Executive Calculator producing incorrect values.

However, the vagaries of binary and single-precision arithmetic do produce some unsettling program results. In the yards-to-miles conversion, entering 1,760 yards produces .99968 miles. In fact, 1,760 yards is exactly one mile. This type of error is unfortunate because the five decimal places suggest accuracy to that level.

The manual contains a summary sheet of the various utilities under the main menu headlines. It's fairly impressive, although I thought some of the calculations were a little too trivial to include.

The conversion module and some of the miscellaneous calculations are not much more than multiplication or division, as in converting square feet to

square inches. Many also abbreviate to the point of imprecision: Square inches appear as inches, for example.

Some of the miscellaneous calculations are also trivial: finding a square root, finding a tangent, multiplication, and division. However, some useful utilities appear in this same module: the number of days between two dates, or the day of the week a given date falls on.

The program does have other shortcomings, but MCS Software is planning corrections for some of them. For instance, I'd like to do further calculations of one type by hitting the enter key in response to a prompt.

In the loan amortization program, I'd like to see a way to change only the interest rate for comparison purposes. Along these lines, The Executive Calculator contains a terminology error: The correct term for the actual yearly interest rate is effective annual rate, not nominal rate.

Another problem is that the section on graphs always starts off with a bar graph, even when you choose a line graph. Since it's possible to toggle back and forth between them, this is mostly an inconvenience.

Evaluation

In spite of my specific criticisms, I feel that this is a useful collection for the average business user. Some of the programs include sound and graphics, and you get a lot of solid financial programs for the money.

The value of these small utilities is their number and their presence in one package. Comparable packages could easily cost twice this much. If MCS attends to the minor difficulties, what is now an excellent buy will become even better. ■

Maryland Model II Games (Volume 1)
3304 Carlton Ave.
Temple Hills, MD 20748
\$29.95

by Charles R. Perelman

Maryland Model II Games provides five games in Radio Shack Basic. Given the Model II's limited resolution, black and white CRT, and graphics

character set, you can't expect Pac-Man. All things considered, this is a credible group of games.

Skydiver, Star Battle, The Wall, Space Swarm, and Mayhem are in order of increasing complexity. You can adjust input factors to vary the difficulty of each game.

Object definition is coarse, with small symbolic representations for various types of space attackers, weapons, or ships. Movement is limited and much slower than the usual arcade games. Response time is also slow. The break

New Release

Now supports Mailing Lists, Form Letters, "ZAP-PROCESSING", and 18 more printer drivers.

**STILL ONLY
\$69.95**

IF YOU STILL THINK YOU
HAVE TO SPEND \$200 FOR A
GREAT WORD PROCESSING
SYSTEM, THEN YOU NEED TO
READ THIS AD!!

The Magnificent WORD PROCESSING SYSTEM

For the TRS-80 Model I and III

- Supports over 50 different popular printers including OKIDATA Microline 80, 82A, 83A, 84A, Oume, Centronics 737, 739, Radio Shack Line Printer IV, VI, Daisy Wheel II, EPSON MX-80, MX-100, Grafrax, Grafrax Plus, Gemini-10, Gemini-15, NEC PC-8023A-C, Spinwriter 5510, 5515, 5520, 5525, C. Itoh Prowriter 8510, Starwriter FP-1500, F-10, Tec 8500R, Smith-Corona TP-1, Brother HR-1, COMREX Com-Riter CR-1, IDS Microprism 480, and Diablo 630.
- Supports proportional space right-margin justifying on Centronics 737, 739, Radio Shack Line Printer IV, Daisy Wheel II, Grafrax Plus, NEC PC-8023A-C, Spinwriter 5510, 5515, 5520, 5525, C. Itoh Prowriter 8510, Starwriter FP-1500, F-10, and Diablo 630.
- Powerful Mailing List and Mail-Merge capabilities for personalizing standard legal documents and Form Letters, handling infinite number of data records per run, infinite number of data fields per data record, and data fields as large as up to 1000 characters each.
- Brand new feature called "ZAP-PROCESSING", allows you to display and edit any type of data or program file in "ZAP" (byte-hexadecimal) format.
- Any character or symbol your printer can print, even dot graphics, can be used in mid-line printing with the Special Character feature.
- Written in fast Z80 machine language with type-ahead key-stroke buffering for speed typing.
- Single key-stroke control of all editing functions for ease of use.
- Continuous on-screen display of word count, line count, and free memory count.
- Superscripts, subscripts, underlined, bolded, expanded and condensed type styles - combine and intermix within a line.
- Automatically justifies and word-wraps on the screen as you type.
- Search, Replace, and Global Search and Replace.
- Odd and even page user-definable headers, footers, and page number lines, with automatic page numbering.
- User-definable linespacing, sheet size, top, bottom, left, and right margins.
- Move blocks of text and copy blocks of text from disk, to disk, and within the text.
- Examine disk directory on any disk and kill files while editing.
- Powerful full-screen editing features for EDTASM and BASIC files, including automatic renumbering of lines.
- Built in function to dump contents of screen to printer.
- Print-previewing formats text, inserts headers, automatically numbers pages, etc. on the screen without printing it on paper.
- Page by page pausing capability for sheet fed printers.
- Supports both parallel and serial printers.
- Printer control code access.
- Works with NEWDOS, NEWDOS80, TRSDOS, MULTIDOS, LDOS, and DOSPLUS - Single or Double Density.
- Compatible with most all available spelling checker programs.

GUARANTEE

Many word processing systems claim theirs are the best, but few would dare guarantee them. Not us! We are confident that **ZORLOF** is the most useful word processing system on the market for under \$200. If you don't agree, return it within 30 days for a full refund.

Add \$2.00 shipping & handling. Florida residents add 5% sales tax. Checks require 3 weeks to clear banks.

Maxi Stat
The Business Division
Box 3435
Longwood, FL 32750
Model I and III, 48K
Two disk drives, printer
\$199.95

by John B. Harrell, III

Maxi Stat is a comprehensive statistics package and a valuable ad-

dition to the library of anyone who analyzes data. It is a full and powerful system that provides functions normally available only on mainframe computers.

You don't need to be a programmer to use Maxi Stat. But it's not a package for the casual user, and you need to know something about statistics.

Maxi Stat provides many analytical functions, including custom programming interface, write subfile, frequency distribution, descriptive statistics, cross-

tabs and chi-square analysis, correlation and linear regression, t-test for matched pairs or independent groups, multiple linear regression, analysis of variance, and multiple variable response.

The write subfile option is not a true analytical function. It allows selection of a subset of data from one file and, possibly, recoding the data and writing it to another file. You can then use this subfile as further input to Maxi Stat.

To perform any statistical analysis using Maxi Stat, you must use the vari-

Games at a Glance

Gauntlet, Computer Shack, 1691 Eason, Pontiac, MI 48054, Models I and III, \$19.95 cassette, \$24.95 disk.

by Mary E. Ruth

Gauntlet is another tank game for the Models I and III. The game begins by informing you that aliens have landed in San Francisco—the opening sequence includes the alien spaceship hovering over the Golden Gate Bridge.

You battle the creatures within a 9- by 6-square matrix of city blocks. You have three tanks—use the arrow keys to traverse city streets and avoid aliens, then fire at them using the space bar.

You score 60, 70, 80, or 90 points for each alien, depending upon the type killed. When you kill an alien, another takes its place. For every 10,000 points you score, you receive a new tank. At least that's what the documentation says—I wouldn't know.

The game manual is serviceable if unimpressive. It mentions "terrific sounds"—after two or three games, the death-march tunes become annoying.

The game is difficult at first, and it doesn't get any easier. ■

Dig Out, Computer Shack, 1691 Eason, Pontiac, MI 48054, Models I

and III, \$19.95 cassette, \$24.95 disk.

by Mary E. Ruth

Dig Out, a Dig Dug play-alike, puts you at the controls of an underground rover who burrows tunnels and dodges monsters through 15 subterranean levels. Use the arrow keys to maneuver your rover through existing tunnels or create your own passages as you go.

You begin the game with four rovers; you get another for every 10,000 points you score. Firing the space bar repeatedly at close range kills the enemy beasts roaming the tunnels; you score 500 points for each one killed.

Two rocks sit on each screen; touching one means certain death. For every monster the rock kills, you score 1,000 points.

The monsters travel through tunnels in any direction. In the absence of tunnels, they burrow up to the top of the screen. Don't position yourself directly below one of them; they drop deadly eggs.

As you progress through the different levels, their speed and resourcefulness increase. You advance to another level only when you kill all the monsters in your present level.

The game comes in a brightly (although not cleverly) designed package. The documentation is adequate

but riddled with misspelled words. The game's sounds seem appropriate at first, but quickly turn into a tiresome drone.

But Dig Out is still fun and challenging. ■

Weerd, Big Five Software, P.O. Box 9078-185, Van Nuys, CA 91409, Models I and III, \$19.95.

by Ronnie Brown

Weerd is a refreshing change of pace from run-of-the-mill computer games. Forget about energizers, disruptoids, and blue meanies. Just watch out for all those nameless critters that flit, skitter, and swoop around your screen.

Your mission is to defend a planet from all sorts of alien craft. Your shots must hit an invader or reach the top of the screen before you can fire another volley.

You have three ships and three sets of energy shields for each round. Shields last for six seconds and protect against all alien bombs, eggs, and debris, but not against kamikaze ships.

If you're tired of playing computer simulations and serious arcade games, try Weerd. ■

Introducing SooperSpooler's™ Little Brother

Who knows spoolers better than Consolink? We pioneered this industry with our revolutionary SooperSpooler, the Intelligent Printer Interface.

Now meet the newest family addition:

MicroSpooler™

especially designed and engineered for those who need cost-effective solutions to their spooler requirements without sacrificing quality and sophistication.

No More Waiting on the Printer

The new MicroSpooler stores data and then feeds it to a printer as fast as the printer can handle it.

That means no down time: in a matter of seconds, your computer is free for the next job **without waiting** for the printer to finish the last job.

Quality, Reliability, Flexibility

As with the SooperSpooler, the new MicroSpoolers are the product of the highest engineering standards to insure trouble-free operation. Now Consolink offers a complete line of stand-alone spoolers that can be installed in-line between virtually any printer and any computer.

Easy to install. Easy to use. Easy on the budget.

Features include:

- 16K Memory: User or factory expandable to 32K or 64K
- Multiple Copy Function
- Status Readout: Tells you how much data is stored or how many copies are left to run
- Pause Function: To let you change paper, make adjustments
- Self-Test Routine: Performs a comprehensive check of most internal functions and memory
- Internal Power Supply: No bulky plug adapters
- Vertical Mount Configuration: Saves desktop space
- Plug-in connections to most computer combinations

- Independently Selectable Baud Rates on Serial Ports
- One Year Limited Warranty**
- Thirty-Day Money Back Guarantee**
- Four Models: Any Combination of Parallel or Serial I/O
- \$199 for 16K parallel to parallel unit with an internal power supply

And When You Need the Very Best...

Remember SooperSpooler, the Intelligent Printer Interface with a remarkable range of software controlled features and formatting capabilities.

See our new MicroSpoolers at quality dealers everywhere. For immediate answers to your questions, call Toll Free 800-525-6705

ous phases of the system to create codebook, data files, and control files. The Maxi Stat task execution system uses a set of these three files to perform the required analysis.

Codebook Management Phase

The codebook is the format description of the data file that the program's analysis section uses. You can enter data in the fixed or free format modes. This allows a wide variety of input formats, including output from most other programs that write an ASCII output file.

You can even edit files using most of the popular text editors. Data record size is limited to 255 characters in the fixed mode and 127 characters in the free-format mode.

Begin the format control entries of the codebook by specifying the number of variables. A variable can be any type of data (an X-ordinate value, an answer to a question, and so on) and can be in numerical or alphanumeric format.

Each variable has a label of up to 40 characters. Maxi Stat uses the label to refer to this variable in any further input or output concerning it.

In the fixed-format mode, you then specify the starting column for the data and the number of columns required for the data field. As part of each variable, Maxi Stat allows the assignment of val-

ue labels to the expected responses.

Figure 1 shows a typical codebook entry. The example contains two variables. The first is the respondent's age in years. You enter it in fixed numeric format beginning in column one and taking two columns.

The second variable is the respondent's candy preference. You enter it in

Fixed	(specifies the file format type)
Respondent's Age (in years)	(variable #1 name used by Maxi Stat)
1	(starting column number)
2	(number of columns used)
N	(specifies numeric type field)
@	(end of variable #1 description)
Respondent's Candy Preference	(variable #2 name)
3	(starting column number for fixed format)
1	(number of columns used)
A	(specifies alphanumeric type)
A = Snickers	(these three)
B = 3 Musketeers	(items specify)
C = No Preference	(the preferences)
@	(end of variable #2 description)

Figure 1. Codebook file format.

IF YOU'RE GOING TO BE PICKY ABOUT AN OPERATING SYSTEM SEE WHICH WAS PICKED BEST.

The readers of 80 Micro were asked to select their favorite operating system for the TRS-80 Model I&III. LDOS, DOSPLUS, TRSDOS, MULTIDOS, WOBOS I and NEWDOS/80 were all on the ballot. They picked NEWDOS/80.

The editors of 80 Micro have also awarded their Hall of Fame Awards. From among every software package on the market, the editors picked only six that they felt made a lasting and significant contribution to the TRS-80 computer.

NEWDOS/80 was one of the six.

Since we first introduced the NEWDOS operating system we've been stating its features, capabilities and advantages. Thank you 80 Micro readers and NEWDOS/80 users for supporting us.

Version 2.0 . . .

High Performance DOS

NEWDOS/80 Version 2.0 is our highest performance system yet. The versatility and sophistication of Version 2.0 includes features like:

- Double density support on the Model I

- Enhanced compatibility between Model I and III
 - Triples directory size
 - Dynamically merge in BASIC (also allows merging of non ASCII format files)
 - Selective variable clearing
 - Can display BASIC listings page by page
 - Automatic repeat function key
 - Routing for peripheral handling
 - Enhanced disassembler
 - Command chaining
 - Superzap to scan files
 - Fast sort function in BASIC
- Hard Disk Support Now Available**
- Support for Apparat's and Radio Shack's Model III hard disk (optional-available upon request for additional \$60)

These features make NEWDOS/80 one of the most powerful additions you can make to your system. And Apparat's commitment to support assures that you've purchased a superior product, both today and tomorrow. At just \$149.00 it could be the best investment you will make for your TRS-80.

For more information see your local computer store or contact Apparat, Inc., 4401 S. Tamarac Parkway, Denver, CO 80237, 303/741-1778.

TRS-80 and TRSDOS are registered trademarks of Tandy Corp., LDOS - Logical Systems, DOSPLUS - Micro Systems Software, MULTIDOS - Cosmopolitan Electronics, WOBOS I - Western Operations, NEWDOS/80 - Apparat.

What do people who've used the NEW amber or green replacement CRT's say about them?

"...Anyone could easily install this replacement CRT. The instructions are clear, simple (if not over simplified), and complete. At no time during the installation was I confused or lost. It even worked the first time I turned it on.

"I believe the orange (amber) phosphor is a great improvement over the standard monitor. Often I sit at my computer for several hours at a time and I can really tell the difference between the two monitors..."

"The (Langley-St.Clair Soft-View) CRT is an excellent product and makes the TRS-80 an even better computer."

Mark Renne
Review in 80 U.S.

"The instructions...are in pleasingly plain English, and I was able to install the CRT in about twenty minutes, even though I had never performed such a task before. The difference in the display is most gratifying; it has a much more 'professional' appearance, the contrast is much better, and it is definitely easier to use for sustained periods of time. The last item is particularly important, since my TRS-80 is mostly used for word processing.

"Again, thank you very much for your excellent service in providing me with a product which is everything it was advertised to be, and which makes my computer more useful...I will not hesitate to recommend your fine product and company to other TRS-80 owners."

REVIEWS

a fixed, alphanumeric format beginning in column three and taking one column. The letter designations listed in the codebook file specify preferences.

Figure 1 appears extremely complex, but Maxi Stat makes it easy to create a file like this with a conversational input sequence that acquires the appropriate information from the user. You never see this file format unless you need to edit the file. The documentation is explicit in its description of all the file formats.

The Codebook Management Phase lets you add to an existing codebook, edit, and print, in addition to creating the file. The editor used for this and each of the other phases is a mixture of Basic and machine-language coding.

The commands are similar to those used in Electric Pencil, making the editor a snap for those already familiar with this system. A word of caution—this is not Pencil and significant differences do exist.

Maxi Stat uses a defined field size for all input required in the various routines. The program displays the specified input field size with the appropriate number of underline characters on the video terminal prior to input and then it updates the input field as you enter each character.

This helps when composing an appropriate data title. However, using the INKEY\$ function in Basic slows the input routine considerably; a rapid typist can overtype the input routine.

Data Management Phase

The next major phase is the Data Management Phase. This is not essential to the system as you can prepare data with any other program as long as that program writes the data file to the disk in ASCII format. ASCII is the standard TRS-80 disk output mode of operation using the PRINT #n statement.

The Data Management Phase directly creates a data input file. The program prompts you for the input values of each variable in the codebook used by the creation program, and constructs the data file in a format the codebook specifies.

Once you create the codebook, this is an easy method to input data in raw form. But if you've reduced and prepared the data for computer input in accordance with the codebook format, a word processor can create the data file much faster.

The Data Management Phase also allows editing the data file and printing the raw data. The editor used is much the same as that used by the codebook manager. The most notable additions to the editor in this phase are data verification and the provisions for setting and using tabs in any video screen location.

You can use the data verification function to read any data file field and verify that each entry is within the specified bounds. This is an extremely valuable function that saves many hours of validating large raw data files.

Analysis Management Phase

The last part of Maxi Stat is the most important—the Analysis Manager. This phase allows the creation and maintenance of job control files that specify the tasks Maxi Stat performs. This allows the creation of many tasks to be saved as one file for execution as a batch system.

The functioning of the analysis manager is similar to the previous phases. The control file is created, edited, and printed as before. The most significant function of the analysis manager is execution of the analysis control file.

Figure 2 lists the contents of a typical control file. This file contains the complete list of tasks Maxi Stat performs; each task is separate and distinct from the others.

Linear Regression Test of Maxi Stat	(page heading to be used for all tasks this run)
BKEX2:1	(codebook file name specified on drive 1)
EXDAT2:1	(data file name specified on drive 1)
Graphical Representation of Data	(title of this particular task)
5	(analysis selection—linear regression)
1	(variable number on the x axis of the graph)
2	(variable number on the y axis of the graph)
@@	(end of task symbol)

Figure 2. Task control file format.

In Fig. 2, the task is set up to execute a linear regression analysis, and prints out the pertinent statistics with a rudimentary graphical representation of the data, including the linear fit that the analysis determines.

The first entry in Fig. 2 is a page heading that appears on all printed pages. Next are the specified codebook and data files for the task to be performed. The last entries are a subtitle for the task and the analysis type.

The number of the variable to be analyzed (which corresponds to the variable number in the codebook used for this analysis) follows the analysis type. In most of these options, the program lets you input a range of variables on which a particular analysis acts. This saves you from reentering the task for each variable analyzed.

The only information missing in this example is the recoding of input data for the specified analysis. One of the analysis manager's most powerful features is the ability to construct recoding directions that allow data manipulation during task execution.

For example, you specify one variable as the respondent's age, and data analysis reveals that its range is 15 to 75 years. You want to group the respondents into age brackets and analyze the data within these brackets. You can manipulate this information during task execution by entering the proper recode directives into the analysis task file.

You can perform an absolute recode, a conditional recode, and a select-if recode as part of any task. Each choice is temporary, modifying the data only as the program reads it from the input file and writes it to the temporary file during data preparation for the analysis subtask.

You can make these changes permanent by using option number one, write subfile. The new file will now contain the recoded data.

Documentation

The user's manual comes in a high quality, three-ring binder. It's divided into six chapters and an appendix, separately tabbed for easy access. A section called Statistical Notes, consisting of the formulas and concepts used by Maxi Stat, provides enough background to let an accomplished programmer modify the system.

A section called Sample Outputs enhances the user's understanding of vari-

ous Maxi Stat routines. It's not comprehensive or detailed enough for anyone but an accomplished programmer to make much use of it. Many of the examples aren't reproducible due to lack of proper input data.

In general, the manual is comprehensive and concise, if not wholly accessible to the beginner.

Pluses and Minuses

The menu-driven Maxi Stat system is easy to use. Error detection is good and prompting for error correction is clear.

System operation, particularly the input routines, is relatively slow because most of the system is written in Basic. However, Maxi Stat is responsive enough that the delay isn't annoying.

The input prompts are excellent. The program specifies each input field on the video screen by first displaying the field size using the underline character. Each input character then appears in the respective position in the field. This feature is particularly useful when you build the data file using the data management phase of Maxi Stat.

Many of Maxi Stat's features depend on the DOSPLUS 3.4 kernel on the system disks. The Getting Started section of the manual addresses how to move the programs from this system to another but does not address any system dependencies.

For example, the DIR command, which you can substitute for a file name at the appropriate prompts, works only with DOSPLUS. This is because under TRSDOS the directory has an intentional error in the Hash Index Table (HIT) sector byte for DIR/SYS that makes the directory inaccessible to the operating system, and the data address marks on the directory track cause a "TRIED TO READ LOCKED/DELETED RECORD" error.

Maxi Stat can't communicate with the operating system in Basic under the TBasic interpreter supplied with the DOSPLUS kernel, although other systems, including DOSPLUS, can. Maxi Stat compensates for this by accessing Dir/SYS under Basic program control, and formatting and displaying the directory under program control.

Numerous conflicts in disk structure exist on the Model I double density disk. These conflicts make the disk unusable if you don't own a version of the DOSPLUS operating system or LDOS. The most significant conflict is location

What do people who've used the NEW amber or green replacement CRT's say about them?

"To the President of Langley-St. Clair:

"Your entire staff merits applause.

"For three months we've been trying to get an Orange Phosphor slow-decay CRT from Tandy, with zero success, even though we've spent over \$16,000 with TRS.

"Three days after calling you, not spending a dime with you previously, we got it. Seventy-two minutes later, it was up and working fine.

"Your shipment service is terrific. Your installation guide is 100% clear with accurate step-by-step instructions and even a touch of welcome humor.

"This is the first letter produced with your CRT. After we try it for a while, we'll probably order two more for our other TRS-80 Mod IIs...from you, no one else.

"Congratulations. Your advertising is accurate."

Rene Gnam

Clearwater, Florida

From an unsolicited letter of testimonial

"I recently replaced the old black & white CRT in my (Heathkit) H89 microcomputer with one of the new Amber non-glare CRT's sold by Langley-St.Clair Instrumentation. The decrease in eye strain was quite dramatic and I highly recommend the amber tube in place of either the plain white or ghastly green that Heathkit offers...

"I must admit there is one drawback. Since the amber tube has a non-glare surface, I can no longer see people sneaking up on me."

John Roy

of the directory on a track other than track 17, and the use of more than five sectors in one granule.

Data disks formatted in single density under DOSPLUS in other than 35-track mode have the disk directory written approximately half the distance into the disk (e.g., a 40-track disk has the directory on track 20). This causes difficulty and additional head movement in finding the directory when you use the disk with a system expecting the directory on track 17.

The Maxi Stat system places two unnecessary restrictions on the user during specification of file names. First, you must specify a drive number for each reference to a file. This is not required when the file has been previously defined. Second, the Basic input routines do not allow for any file extensions.

Maxi Stat allows the use of floating point or real data as input values. The user must be careful when using data that is not integer in value. You can only use this particular data type in the free data format and it might cause problems in print output formatting.

One annoying feature of the editor routines used to maintain the codebook, data files, and task control files is the system reboot on exit from the editor. The Basic high memory value is set on entry to the editor to protect the code's machine language portion that the Basic part of the editor loads.

After setting the word beginning at 40B1 hexadecimal (hex) to the appropriate value upon entry to the editor, the program resets this value by POKING a Z80 HALT instruction into 402D hex (normal DOS exit point) and calling it via the USR function of Basic to exit the editor.

On the normal TRS-80, this causes a system reset, as the halt signal is tied to the reset line of the computer. This feature doesn't work on other computers, such as the LNW-80, and requires pressing the reset button to exit.

The editor is a hybrid consisting of a Basic main program with machine-language support routines. The editor's commands are almost identical to Electric Pencil and its performance is quite good.

One significant difference is the handling of insert/overwrite modes. The editor is normally in the overwrite mode of operation, meaning that text is replaced with the new text you type over it. Maxi Stat's editor automatically goes into the insert mode if you at-

tempt to extend a line and remains in the insert mode until you press the break key, the enter key, or the appropriate control key.

Another difference is that you can't exit the editor, short of resetting the computer, without rewriting the text buffer to the disk.

The DOSPLUS 3.4 kernel selected for sale with this software package doesn't have a sufficient number of commands to support full operation with this system alone. Maintenance of the Maxi Stat data disk using commonly found utilities and system functions

from other operating systems eventually forces you to move this program to another operating system.

Conclusion

The Maxi Stat system is a superior product that provides a means of complete statistical analysis without accessing the programmer levels of the computer. The system is easy to use and relatively error free.

You would have to make a substantial programming effort to duplicate the program's many functions. Maxi Stat is well worth its price. ■

The Home Accountant
Continental Software
11223 South Hindry Ave.
Los Angeles, CA 90045
Model III, 48K
Two disk drives, printer recommended
\$74.95

by Timothy Daniel

Quick! Without looking, how much money is in your wallet? If your guess is accurate, you're a good candidate for Continental Software's Home Accountant. You don't have to be rich to use it. But you have to care about your money and where it goes to appreciate this package.

At first glance, Home Accountant is just another checkbook program. But if you dig deeper, you'll find a checkbook program gone wild.

You can use up to 99 budget categories, incorporate automatic depreciation or appreciation, search for individual transactions, print checks, generate graphs, print financial statements, and, yes, even balance your checkbook.

Here's what you need to get started: a Model III with at least 48K RAM and TRSDOS 1.3, two disk drives, and a printer, preferably one that can handle 132-column printouts.

The multilevel menu format lets you select the options you want. You can start by trying to balance your checkbook. It's a bit like hauling trash in a Cadillac, but when you're ready to upgrade, the capability is there.

At the Core

The nucleus of Home Accountant is

its budget module. You only have two budget categories in the simplest application, one for your checking account balance and the other for cash. The 99 budget categories are divided among expenses, income, assets, and liabilities.

Each category contains two values. The first is a current balance, reflecting the transactions entered to date. The second is assigned by you and is the amount you've budgeted for that category. While budget values aren't required, they can help, since Home Accountant reports on their deviation from actual values.

Once you set categories and enter predicted values, the budget module becomes dormant and you can use the transactions module to enter daily expenses and income. Without complete and accurate reporting, Home Accountant is just an expensive time waster.

In a bare bones checkbook configuration, data entry and reconciliation take about an hour a month. If you choose to use full record keeping, plan on spending as much as an hour to enter a week's worth of transactions.

Home Accountant's two data entry shortcuts, automatic transactions and split payment, aren't usually found in a home finance program. Home Accountant allows you up to five automatic entries per checkbook. Every time you run the Start New Month routine, transactions such as monthly car payments or retirement check deposits are automatically entered.

Split transactions are handy for when you write a check at the store and get some cash back. To keep square with your budget, allocate the amount of the check to two categories: food and cash.

Another split payment is insurance that covers both your home and car. You can split transactions among any number of categories, but, of course, the dollar total of the splits must equal the original transaction total.

You enter all transactions in a cash, credit card, or checkbook account. You must specify an existing budget category. This provides some measure of protection, but the most important error trap is when you reconcile the checkbook balances with your bank statement. If a problem occurs, you might need to use Home Accountant's search/edit feature.

You can base a search on something as vague as the dollar amount of a transaction or the budget category, or a criterion as specific as the date and check number. Once you locate a transaction of interest, you can review and correct it.

While this system of checks and balances might fall short of accepted accounting standards in the business world, it should be adequate for home accounting.

The Report Modules

Home Accountant really goes to work when you access the report modules, the most comprehensive of which is aptly named Printed Reports. Within the module are three sections: budget, personal balance sheet, and income/expense summary. Each of these offers several options.

Budget reports range from a simple printout of the categories you've defined and their assigned numbers to a 12-month budget summary. A third printout, identical to the budget summary, lists monthly totals for each category.

Both the actual and budget printouts require 132 columns. However, you might get by with your standard-width printer; Continental includes a software routine that sends user-defined control characters to your printer. That way, printers like the MX-80FT or the NEC 8023 can generate 132-column output using a reduced type size.

The second section of the Printed Reports module produces a personal balance sheet. This report represents your financial health, listing the current balances for all your assets and liabilities, including checking, cash, and credit cards.

On a balance sheet, net worth is literally the bottom line. You can get a

We have CP/M[®] for Radio Shack computers.

2,000 new programs for your TRS-80[®] 12.

CP/M is the runaway leader in disk operating systems, but until now owners of Radio Shack computers have been locked out of the thousands of useful programs that operate on CP/M.

Now you can put the power of CP/M into your Radio Shack TRS-80 II, 12, or 16, and be able to use all the popular and useful software—and hardware—that has been previously out of your reach.

Use any printer.

Instead of being chained to Radio Shack hardware, you'll be able to add a video terminal, any printer (serial or parallel) and several Winchester hard disk drives with storage up to 80 megabytes.

Uses only 8.5K of memory.

Since our first version went on the market in 1980, we've condensed and refined it into a compact, easy-to-use system enjoyed by thousands of users.

Besides the standard Digital Research CP/M manual, you'll get the 250-page manual we've developed through our long experience in adapting CP/M to Radio Shack computers. Our manual has lots of examples and an index and glossary.

You'll have your first working disk in ten minutes.

Only \$200.

The floppy disk version of Pickles & Trout CP/M is \$200. The hard disk versions (for Tandy, Corvus, and Cameo) are \$250, except for the multi-user Cameo, which is \$400.

Santa Barbara, CA 93121 (805) 966-1449

balance sheet that compares your actual numbers with the budget numbers. A third option is a report that compares one month's data with the previous month's.

The last section of the Printed Reports module comprises the income and expense summaries. Just as the balance sheet calculates your assets and liabilities, the income and expense summary is a picture of the running balances of the income and expense accounts.

Formats include a single month's data, year-to-date totals or a range of fewer months, comparison to a prior month's total, and comparisons to budget. A numerical percentage accompanies each figure, showing its relationship to total income. Reports conclude with net income, the difference between income and expense totals.

The Printed Reports module provides totals only. For the story behind those totals, you'll need to use Home Accountant's Activity Report module.

You can tailor Activity Report printouts to your needs, ranging from a listing of all transactions entered to a highly focused report of transactions on a particular credit card that are tax deductible.

You produce Activity Reports using screens like those in the Transactions module's search/edit function. Specify the criteria of interest and the program searches the transactions file for a match.

Besides listing transactions, the Activity Reports module prints checks. You'll need a special kind of computer-compatible check to do this; Continental Software includes information on where to order them.

To print checks, you must enter the pertinent information in the transaction module, go to the Activity Reports module, and search for the appropriate entry. Before printing, you have a chance to enter a name and address, a handy addition if you want to use window envelopes.

Last but not least among Home Accountant's reports is the Graph module. Available only as a video display, the Graph module generates a histogram comparing 12 months of actual and budgeted values for a given category. The program fits a trend line to the actual values, letting you see what the totals might be in the future.

Home Accountant's features are

aimed at middle- to upper-middle-class households where income comes from salary, most purchases are made by credit card or check, and investments are simple. If you have a complex portfolio or if you wheel and deal, you might want more flexibility than this program offers.

"Your computer-generated reports probably won't substitute for a loan application, but they do add credence to your claims."

Not Perfect

This accounting program's documentation is of mixed quality. For instance, the user's guide includes a brief introduction to the program and a step-by-step walk-through of setting up budget categories, entering and editing transactions, and printing reports.

After the first few sessions, you won't need the manual thanks to the menu-driven format, on-screen prompts, and error trapping. But the documentation falls down in providing realistic examples or advice on how to set up your budget.

Continental provides no demonstration disk or sample data base. If you want to experiment, you must start from scratch.

You must also watch for some pitfalls. Do plenty of planning before setting up your budget categories. Consider what information you need a year down the road; once you start a system, it's difficult to go back and change it.

Don't underestimate the time it takes to maintain accurate records. Ideally, you should keep a handwritten log of your daily expenses, entering them into the computer at least weekly. If you

don't, you might end up lumping many transactions into a miscellaneous account, diluting the value of future reports.

Other drawbacks include the inability to create a back-up of the program master disk, plus frequent and sometimes lengthy waits while the program accesses disks.

My final gripe centers on Continental Software's unusual support policy. To get service direct from Continental, you must shell out an additional \$20. If you choose not to register and you blow the program disk, it costs you \$17.50 for a replacement.

Direct Benefits

Home Accountant's most obvious benefit is its precise tracking of your daily financial activity down to the penny. Such record keeping pays off in two ways.

First, by taking time to record and enter transactions, you become more conscious of your spending. This form of self-monitoring can be effective in curbing excess spending.

A second advantage comes at tax time. Using Home Accountant's records, you can take full advantage of deductions. If, for example, you feel that the standard sales tax deduction is less than that to which you are entitled, you can rely on your computerized records to find out what was paid.

Home Accountant's ability to generate a balance sheet is another plus. These numbers might have little direct impact on your daily habits, but they make it easier when you apply for credit or other forms of financial assistance. Whether for a college scholarship or a home mortgage, an institution is likely to ask questions to determine your net worth.

Your computer-generated reports probably won't substitute for a loan application, but they do add credence to your claims. Stapling a copy of your balance sheet to the application indicates that you are on top of things and that the data you provide doesn't come from thin air.

No financial software package can do everything. It can't replace the advice you receive from a tax consultant or accountant, and it won't magically change the size of your balance. But if tracking your money closely is important to you, Home Accountant might be worth checking out. ■

Now...from Dr. David Lien, the master of making the difficult simple, comes the complete way to **HARNESS YOUR TRS-80**

Face it. Until you can talk to and understand your Model I, II, III or 16 Tandy TRS-80*, it's nothing more than a mass of microcircuits in a plastic box.

You need help to harness your TRS-80 and make it work for you. And that's just what you get from *Learning TRS-80 BASIC*.

Written by David Lien, author of the popular *TRS-80 User's Manual for Level I*, *Learning Level II* and *The BASIC Handbook*, *Learning TRS-80 BASIC* is at once entertaining, informative and easy to understand. It's the perfect guide to entering the world of microcomputers.

In *Learning TRS-80 BASIC*, David Lien gives you simple, step-by-step instructions, including programs you can use in business or home finance, for entertainment, or to help troubleshoot problems. You'll even learn to write your own custom software. Ideal for the classroom, too.

Included are short Question and Answer sections which help make sure you understand everything you've learned—it's almost like a correspondence course... without the correspondence!

No matter if you own the Model I, II, III or 16, *Learning TRS-80 BASIC* is one book no TRS-80 owner should be without.

Available at better computer and book stores,

TRS-80 for Kids from 8 to 80

Michael P. Zabinski

Howard W. Sams & Co. Inc.

4300 W. 62nd St.

Indianapolis, IN 46268

\$9.95

by Richard Ramella

My 7-year old son got first dibs on this book. Five minutes after he disappeared into the computer room with it, I heard a whoop and he came running into the front room. "It works!" he yelled. He successfully entered and ran a program on his own.

That's the most important thing I can say about *TRS-80 for Kids from 8 to 80* by Michael P. Zabinski, founder of the National Computer Camp. The material works and encourages the reader to keep going. Any beginner can profit from this book's approach.

The 11 short chapters are in a workbook form familiar to elementary-school students. They include lots of white space, room to write in answers, illustrations, and humor.

The first chapter describes the TRS-80 Models I and III and sets the tone for what follows: simply presented material and questions designed to make the user look carefully at the computer. He'll also want to experiment.

The book increases in sophistication step by step. The user learns concepts, types in material, and—in the best of all possible worlds—gets the important idea that he can change parts of a program to make the computer perform interesting tricks.

The last chapter contains seven longer programs. The user, no longer a beginner, might have to work hard to get these programs running, but that's good. You can learn a great deal by keying in published programs.

One warning: Children enjoy achieving on their own, but an experienced adult should be ready to offer necessary help, no matter how simple the material. Tacitful assistance keeps frustration low and encourages the child to continue alone.

TRS-80 for Kids is the first of two volumes. The second book offers more Basic programming concepts. I recommend this book, especially for children. Absorbing even a few of the ideas here will get them on their way to Basic competency. ■

by Wynne Keller

Forms and Prosort are both superb enhancements to the popular Profile III+ data-base management software. They feature extensive new printout formats and sort/select capabilities. Serious users won't want to be without them.

Forms

The Forms programs let you format virtually any type of report and have complete control over the placement of fields on a page. This frees you from the limitations imposed by Profile III+ relative to the number of lines per record and the spacing between records.

The Forms programs come on a TRSDOS-formatted disk. Using simple Do file commands, you transfer some of the programs to your Profile Creation disk and some to your Runtime disk. This transfer creates a new menu that offers extended file functions.

The Forms programs come with a 65-page manual in a three-ring binder that includes an index and a table of contents. Experienced Profile users have little need for this manual because the Forms formatting instructions are similar to those for Profile's Report generator.

For those who need more help, the Forms disk provides a complete sample data base, and the manual provides a tutorial on creating an invoice form.

The largest form possible is 132 characters wide and 66 characters long. You can specify a shorter length, and you control width by proper field placement.

You have to be careful not to locate a field so that it overruns the form. If it does, a solution might be to print the form in reduced character format.

In developing a format for your form, you'll want a printout ruler to measure character width and line length. The screen displays the cursor position at all times.

Using the arrow keys and a few other keys, position the cursor and type. You can place almost anything on the form, including special characters if you have a printer that supports them.

As with Profile, the @ symbol prints the record number. Pressing the asterisk and field number prints that field. You can force fields to the left to close up spaces between adjacent fields. The program supports page numbering and dating.

Printouts

The program creates fancier printouts using special functions like underlining and half-line feeds if you have a Radio Shack Daisy Wheel II printer; a Dot Matrix 200, 400, or 500 printer; or a Line Printer V or VIII.

With some printers, you can also print characters not found on the keyboard, such as fractions or the English pound symbol.

If you have a different printer, four user-defined codes are available. This process requires patience and involves patching one of the programs with the hexadecimal codes for your printer. It should take programmers less than a half hour to make the changes.

The program does not have an option to select print size, but you can patch this into the spare codes, too.

To print records with Forms, you first have to build an index with Profile III+ or Prosort because Forms doesn't have sort or select capabilities.

Forms III is a fine program. It's easy to use and increases Profile III+'s flexibility tenfold.

Prosort

Prosort solves a variety of the problems inherent in Profile III+. With Profile III+, you can divide a data file into three segments, and any field used for sorting has to be in the first segment. Since the first segment cannot exceed 255 characters, some fields you want to sort might not meet this restriction.

Also, you have to assign field numbers in the proper order. The primary sort field must be first with the secondary sort field immediately following. For instance, Profile III+ would never sort a data file organized as part

UNITED SOFTWARE ASSOCIATES

PRESENTS

ULTRA TERM

A FULL FEATURED TERMINAL PROGRAM

The Ultra Term communications package is one of the easiest to use and most versatile communications programs available for the TRS-80. It includes a full featured intelligent terminal program, with all the popular features of competing programs costing two to three times as much, and some new features that can't be found anywhere else at any price. Ultra Term also includes a self relocating host program, and hex conversion utilities for bulletin board downloading. Some of Ultra Term's unique features are:

- Supports both manual and auto dial modems
- Exclusive Ultra Term direct to disk file transfer mode, allows unattended operation at the receiving computer
- Exclusive split screen feature allows simultaneous two way communications without confusion.
- Line printer support with a 1K print buffer.
- Half and full duplex support.
- Universal ASCII format file transfer with a 33K Buffer.
- A full featured host program

number, part name, and vendor code first by vendor, then by part name and number. To do so, vendor would have to be the first field.

Field length is nearly as important as field placement. The primary sort must include all the primary sort field, then as much of the secondary sort field as fits in the computer's memory. If the primary sort field is long, the secondary field might not fit.

These sort limitations are a serious problem in some applications. Initializing Profile III+ requires an extraordinary amount of advance planning, and it provides no flexibility should your needs change.

Prosort allows sorting by any field, in any order, from any segment, ascending or descending. You can save the indexes created by these sorts on disk and use them for printouts. It's also possible to build one index from another, thereby fine-tuning the selection process as much as necessary.

The Prosort programs come on a formatted TRSDOS disk. You can transfer them to your own Runtime disk with a simple command.

The 77-page manual has a hard cover and a three-ring binder. It's divided into a sample section and a reference section. The sample is a step by step tutorial using a data base provided on the disk. The reference section provides similar information in a more condensed form.

Running Prosort

Access Prosort through the Extended menu, which offers Prosort itself, printing labels or reports from Prosort indexes, and selection of records from a Prosort index.

You can save five indexes on disk for reports, and use a sixth for searches in the regular portion of Profile III+. This sixth index, the Inquiry index, replaces the regular Profile index, and you access it from the usual Profile menu.

To build an index, specify the fields to sort and search. Five fields from any segment of the data file can be included in the sort. You control the length of the field to be sorted. Sorting just the first few characters of the field improves speed, and is frequently all you need.

You can put each field in ascending or descending order. Best of all, the sort fields do not need to fit in memory. If the file is too large, the program automatically sorts in segments, and the segments merge together into a single index.

The search can total 16 fields, but this number is misleading because you might use some fields more than once in the search. For example, if you want to search a range, enter the field of the range twice: once for the low number, once for the high.

Similarly, to search the state field for AZ, CA, and NY, you must select the state field three times. Even so, 16 fields should be adequate for most needs.

After specifying the select fields, enter the search relationship (And or Or), the search mode (Equals, Range, and so on), and the search item.

The sort/search then proceeds. I sorted four fields in a 225-record data base and the computer was busy less than a minute. When I added search operations, it was slightly slower, but well under two minutes. It takes you longer to set up the sort/search than it takes the computer to perform it.

Once you establish it, you can use an

index over and over. Of course, you'll want to re-sort whenever you make changes or additions in the data base.

This points up the only flaw I found in the program: It doesn't save the search/sort criteria for any particular index. If you decide to re-create an index, you must start over specifying which fields to sort and search.

It is possible to create an index from another index. In this way, you can achieve sophisticated selection. Prosort also supports mass updates on an index. This permits the recalculation of math formulas on selected records—a powerful enhancement. The SuperScript merge also functions from Prosort indexes.

Forms and Prosort require a multi-drive system. Their sort/select and printout capabilities are valuable enhancements to your Profile III+ data base. If you depend on Profile, don't miss them. ■

Optimal Manager
Transpower Corporation
1 Oak Drive
Parkerford, PA 19457
Model II, two disk drives
\$495

by Charles R. Perelman

Here's your opportunity to improve efficiency by applying statistical and operations research techniques to your business. Optimal Manager is an impressive potpourri of quantitative analysis and useful algorithms that Ronald Satz has gathered into 47 Model II programs covering many common business problems.

Three 8-inch disks contain the routines in compiled Microsoft Basic. Other versions are available for CP/M and Xenix operating systems.

You need two disk drives to run the software. Distribution disks are password protected and autoloading from initialization to prevent copying or tampering.

If a disk is damaged, a registered user can obtain replacement disks from Transpower for \$20. They furnish registered owners with any updates. If you

have problems, call or write the author.

What the Programs Do

All programs are grouped in four modules: Optimal Product Investment, Optimal Product Manufacture, Optimal Product Distribution, and Optimal Product Pricing and Advertising.

You use a wide range of mathematical and statistical techniques for improving business efficiency, including probability concepts, linear programming, dynamic programming, queuing theory, integer programming, network analysis, game theory, and Markov chain analysis.

Your computer handles the complex mathematics, repetitive calculations, and iterations, so you don't need to understand calculus or any underlying theories.

However, you need to know the fundamentals of quantitative analysis management techniques or have ready access to a reference text to get anything meaningful out of this package.

I tested more than half the programs. All performed without error. The formats for the other programs were either more sophisticated or varied enough from the texts I consulted so I couldn't validate them with my references.

With Optimal Manager you can forecast components of your business plan such as market share, demand, product

INCOME TAX OFFICES: MULTIPLY YOUR OUTPUT.

WITH TaxPro™

THE PROFESSIONAL INCOME TAX SYSTEM.

TAXPRO DOES MORE.

Five years of successful use and system improvement has pushed TAXPRO far beyond Form 1040 and its supplemental schedules. This versatile system also totals W-2s, computes FICA overpayment, calculates tax alternatives . . . even prepares client billing.

TAXPRO IS INTELLIGENT. It analyzes the client's tax picture, suggests the best route to go. Determines eligibility for special forms such as minimum/maximum tax, income averaging, to name a few.

TAXPRO IS EASY.

Because it follows the tax forms line by line. Taxes are automatically figured, entered everywhere they apply. Change any entry, and all relevant data is automatically revised. Produces a printout that exactly fits 1040 and

IRS-approved schedule forms.

TAXPRO IS GUARANTEED. We stand behind TAXPRO completely. Full, no-charge support through the tax season. Inexpensive, yearly system updates. Over 5 million returns prepared with no reported errors.

TAXPRO BUILDS PROFITS. The door is open to higher profits than you have ever enjoyed. Double, triple, or quadruple your output; pay for TAXPRO and the computer in one tax season.

If you do income tax returns, you need

TAXPRO, the truly professional, computerized income tax preparation system.

Look into it today.

LOAD 80

TO YOUR RESCUE

LET LOAD 80 AND COLOR LOAD 80 RESCUE YOU

In the dawn of the computer age programmers needed the patience of Job to manually keyboard all the major program listings from a single issue of 80 MICRO.

Then LOAD 80 burst onto the scene and exploded that practice. Today thousands of TRS-80* owners use LOAD 80 cassettes and disks every month. These time-conscious computerists spend more time enjoying all the benefits of those 80 MICRO programs.

LOAD 80 programs come directly from 80 MICRO giving you complete and detailed documentation right there in the magazine. And now, the new disk transfer system allows Model III users to run LOAD 80 disks without conversions.

Save close to 30% on the single issue price by subscribing to LOAD 80 today (choose either monthly cassettes or disks).

Color Computer users can now order our September 1983 Quarterly, containing programs from the August, September and October issues of 80 MICRO (available September 1983). Also available is the "Best of '82" cassette, containing Color Computer programs from the 1982 issues of 80 MICRO.

Start enjoying all the benefits of the programs in 80 MICRO without all the programming hassles. Fill out the attached order form and send it to **LOAD 80**, 80 Pine Street, Peterborough, NH 03458. Or call toll free and use your MasterCard, Visa, American Express.

cost, pricing, profit level, and plant expansion alternatives. You have several inventory control models as well as machine reliability, maintenance and replacement policy evaluations, resource allocation techniques, and quality control measurements.

Determination of the critical path for a Project Evaluation and Review Technique (PERT) network, and other scheduling and quality control routines are presented. You can use the system to evaluate job applicants, assign employee tasks, and select project teams.

Other programs help you determine plant or warehouse locations, shortest delivery routes, and shortest distance or cost for shipment or maximum flow path. Waiting line (queuing) procedures measure efficiency in serving customers.

Investors can benefit from programs that allocate investment funds, select a stock portfolio, and determine when to sell appreciating assets. Output is an optimum management solution, as the system name indicates.

To his credit, Satz has structured program inputs for practical application. This causes problems at times because of the rigidity of the system. No provision is made, and no information is given, for using a program if you are missing some of the inputs.

Running the Programs

From the master menu you choose a submenu listing all programs in a particular module, then select again from the submenu for the actual program. The program prompts inputs with an opportunity for correction.

After you enter all data, the program screens all input prompts individually without showing the data you previously entered. You must either enter new data or press the enter key if you recall that the original input is satisfactory.

Each time you rerun a particular program, the same input prompts appear. Pressing the enter key retains input data from the prior run. Reentering unchanged data using the enter key is fine, but not having the prior information on the screen for review is a problem. Since the disk is protected and the program compiled, you can't patch it to correct such an oversight.

Each program produces both screen and printer output. After completing a run with hard copy, "Dual Routing now OFF" might appear. Satz claims

this is a TRSDOS defect that shows up on some printers.

In the output, the program lists all parameters that the user specifies, but it often doesn't print assumptions chosen from screen menus. Printing them would produce a complete presentation.

If you want to abort a routine, Reset is your only recourse. You must use TRSDOS initialization with autorun of Optimal Manager. Neither the hold nor the break key is active at run time. Satz states that these problems are unique to

"You can use the system to evaluate job applicants, assign employee tasks, and select project teams."

TRSDOS and don't occur with other operating systems.

Other annoying program features include the following.

- Solutions scroll too rapidly to read, so you need a printout to review the entire output.
- The lack of a top-of-form prior to printout results in gaps in schedules when top-of-form occurs in the middle of a solution.
- Inability to change the length of page although the TRSDOS Forms information appears during each printout routine.
- Most punctuation not accepted in titles apparently results from using Input rather than Lineinput.
- Lack of commas in large numbers makes them hard to read.
- No identifying numbers when you enter a series of related inputs such as a data table makes it difficult to keep track of entries.

For example, the second item might be followed by seven or eight unnumbered question marks for entry of parameters or details relating to that item. This problem is compounded

when you try to correct an entry and can't view the original data.

Documentation

The distribution disk is configured for thin-line disk drives. Instructions in the manual for deactivating the thin-line patch for the standard Model II are incorrect.

I finally booted drive zero with a system disk for the Model II containing Patch. Then I switched this disk to the second drive and ran Unthin with the distribution disk in drive zero to make the necessary DOS changes. The documentation is being revised to correct this.

The manual is nicely prepared in a padded three-ring binder with plastic envelopes for the distribution disks. It is clearly and legibly printed with wide margins. You get a sample solution run for each program, a description that usually consists of one paragraph, and reference notes commenting on one or more input or output factors.

Unfortunately, the descriptions don't mention alternatives offered in some programs. Obviously, they need explanation. Each program has a screen description that you can read or skip since it duplicates the manual and offers no further enlightenment.

Pros and Cons

Optimal Manager is on the right track in offering a whole gamut of menu-driven programs that propose solutions to everyday business decisions.

Operations research proponents or students of quantitative analysis techniques might take issue with some of the models selected, but this comprehensive package gives managers insight and provides computer simulation for different resource allocations and business game plans.

Satz fails, however, to reach the level of most business decision-makers who are unskilled in quantitative analysis jargon and have no background in managerial science. I strongly disagree with his statement on the last page of the manual that "Inputs and outputs are very clear and simple to understand."

A number of programs require input of figures for standard deviation. Nowhere in the programs or manual is this fundamental statistical measure defined or its use explained. If you do understand the implications of its use, you'll want a table of area under the normal probability curve or a program to deter-

mine the area, neither of which is included.

Similarly, such terms as regretist, Poisson distribution, Erlang distribution, penalty coefficients, and sigma limits appear throughout the manual or programs without definition and some are abbreviated without explanation.

The manual tells you, for example, that the program uses the Cobb-Douglas function to determine proportions of labor and machinery for optimal production results. You enter two exponents, but you get no explanation of their significance. The reference note states that exponents are usually between 0.4 and 0.6.

After some research, I found that the exponents apparently relate to the relative increase in product from applying a 1 percent increase in labor or ma-

chinery (capital in the original Cobb-Douglas function). Quality documentation should explain all essential terms and illustrate usage if it's not obvious to a complete novice.

Figure 1, a documentation sample, is the description and reference notes for an algorithm to determine the shortest route through a network. Many manual descriptions contain more technical lingo than this one.

You can use this program to determine shipping routes between two destinations when a number of alternative paths exist. Figure 2 is the solution. A vertex is equivalent to a location or town at a junction in the network of connecting roads.

To use Optimal Manager, the majority of businessmen need a manual that contains definitions of unusual, scientific,

or statistical terms in plain English, or at least some explanation of why a measure or parameter applies.

The manual also needs instructions for obtaining data required for input where not obvious or instructions on using estimated amounts for standard deviation.

A discussion of the meaning of results, including the significance of probability distributions, the meaning of regretist and other alternative choices, and the effect of penalty coefficients or other limitations on accuracy is missing.

The manual doesn't contain a presentation of the actual algorithm and references for further information on the technique and statement of assumptions inherent in the method. This would help interested users understand routines of special value to their business, then use the specific algorithm as the basis for a customized program.

In fairness, Satz often indicates the general analytical method or names the algorithm applied, and he lists four texts on the last page of the manual as the sources of some of his material. I found these references difficult to locate. You'll need more information if you want to go beyond mechanical use of the program.

The average user also needs statements of the algorithms' limitations and assumptions necessary for validity.

Suggestions of other types of problems for which a routine is suitable would be helpful. A limited number of alternative applications are mentioned in a few instances, but some of the programs have wider applications than title designations indicate.

The interface of manager and scientific analytical procedures through the documentation must be improved to render Optimal Manager truly useful. The software needs more tutorial documentation written in non-technical terms.

If you are familiar with quantitative analysis as applied to management decisions or are willing to spend time studying textual material to interpret the required inputs and meaning of outputs from these optimization programs, Optimal Manager is a worthwhile investment.

Be sure the range of methods encompasses problems you face. The software represents a considerable programming effort and furnishes a broad array of analytical management tools. ■

PROGRAM UNIT III. 5: MINIMUM DISTANCE OR COST PATH

Description

This program unit uses Dijkstra's algorithm to locate the shortest path through a directed graph, given the distance matrix (distance from each vertex to each other vertex). Inputs to the program unit consist of the number of vertices in the graph or network, the distance matrix, the starting vertex, and the ending vertex. The program unit outputs consist of the sequence of vertices on the shortest path and the length of this path.

Reference Notes

Devise the distance matrix of your network before running this program unit. Remember that the "distance" may actually be cost or time, whichever is relevant to your problem.

Figure 1. Sample documentation.

Distance Matrix						
Vertex	Vertex					
	1	2	3	4	5	6
1		17		31		
2	17		12	29

REVIEW DIGEST

RAM Sledges, XYZT Computer Dimensions Inc., Two Pennsylvania Plaza, Suite 1500, New York, NY 10121, Models I and III, \$25.

"The RAM Sledges program does what its makers claim. It makes Z80 programs relocatable and provides all the code necessary to do this.

"...This product will be useful for intermediate to advanced assembly-language programmers. It relieves much of the tedium associated with writing relocatable Z80 code and suffers only from the fact that you cannot specify segments of a program for relocation." *InfoWorld*, June 27, p. 50.

The Complete Book of Word Processing and Business Graphics, Walter Sikonowiz, Micro Text Publications Inc., Prentice-Hall Inc., Englewood Cliffs, NJ 07362, paperback, \$14.95.

"While both word processing and business graphics are indeed thoroughly covered in this informative and comprehensive (if somewhat dry) work, nowhere are the two combined to show how graphics and charts, for example, can be incorporated in a report without cutting and pasting.

"...The book offers extensive—but by no means complete—lists of manufacturers of computers, peripherals, and software, and concludes with a well-stocked glossary." *Personal Computing*, July, p. 141.

The VC Formula Printer, The Alternate Source, 704 North Pennsylvania Ave., Lansing, MI 48906, Models I and III \$39.95, Model II version under special order \$49.94.

"...a series of linked machine language programs...read a standard VisiCalc file and then send to your printer the formulas in a layout that is like the spreadsheet you created.

"...This product provides an ex-

cellent, easy-to-read, logically arranged listing of the VisiCalc formulas. ...It solves for many of us the problem of obtaining easily read and understandable hardcopy backup. It aids in program development by eliminating the wasteful use of computer memory..." *Basic Computing*, July, p. 114.

Alcor Pascal and Advanced Development Package, Alcor Systems, 800 West Garland Ave., #204, Garland, TX 75040, Models I and III, 48K, one disk drive, Pascal \$199, ADP \$125.

"Alcor Pascal is a powerful language-development system...Nearly all of standard Pascal is implemented along with many useful extensions to the language. The performance of Alcor Pascal programs is usually much better than equivalent programs written in BASIC, and the Advanced Development Package Z80-code-generator option lets you produce even faster programs." *Byte*, July, p. 470.

ListMaker, Reader's Digest Services Inc., Microcomputer Software Division, Pleasantville, NY 10570, Models I and III, \$97.50.

"...ListMaker can handle large numbers of records, of course; its limitation is that it lacks the sophisticated multi-level sorting capabilities often required when working with long lists.

"...because the program is menu driven and interactive, it is extremely easy to use. ...Error handling was excellent. When trouble occurs, the program displays an error message in plain English." *Creative Computing*, June, p. 100.

SuperScript 1.1.0, Tandy/Radio Shack, One Tandy Center, Fort Worth, TX 76102, Models I and III, Disk systems, \$199.

"Radio Shack has released an updated version of SuperScript, version 1.1.0, which corrects some of the problems associated with the original release.

"...It appears that this updated release has not lost any of the special features that made the original version so powerful. ...The special printing capabilities are more accessible now that drivers for all of the current Radio Shack printers are provided." *Basic Computing*, July, p. 113.

NEWBASIC 2.0, Modular Software Associates, 209 18th St., Huntington Beach, CA 92648, Models I and III, \$39.95.

"NEWBASIC 2.0 adds a set of powerful commands to Disk Basic. ... A total of 49 new commands may be added.

"...NEWBASIC is a very useful tool for anyone programming in BASIC who wants very high speed graphics and animation effects that are simple to program, and needs the advanced commands and time-saving features this program provides." *Basic Computing*, July, p. 110.

Pro-Color-File, Derringer Software Systems, P.O. Box 5300, Florence, SC 29502, Color Computer, \$79.95.

"...there will be a number of hours between 'program-arrival' and 'up and running', but I believe the effort is worth it.

"Pro-Color-File is a very sophisticated data base management program.... P-C-F can best be described as a system rather than a program, because it consists of 8 programs and one control file, plus a series of at least 7 control and data files for each database.... I describe it in such detail to indicate the versatility of the systems not the demands the system makes on the user." *Color Computer News*, June, p. 22.

CALENDAR

September

- 12-14 IEEE Computer Society, Silver Spring, MD. **International Conference on Computer-Aided Design** Santa Clara, CA.
- 15-18 Northeast Expositions Inc., Chestnut Hill, MA. **Twin Cities Computer Show and Software Exposition** Minneapolis Auditorium, Minneapolis, MN.
- 16-18 **Great Southern Computer and Electronics Show** Veterans Memorial Coliseum, Jacksonville, FL.
- 16-18 **Compufair** Seattle Center Exhibition Hall, Seattle, WA.
- 19-21 American Management Associations, New York, NY. **User Documentation Course** Washington, DC.
- 22-24 Northeast Expositions Inc., Chestnut Hill, MA. **Rocky Mountain Computer Show** Merchandise Mart, Denver, CO.
- 26-29 IEEE Computer Society, Silver Spring, MD. **Compcon Fall '83** Marriott Crystal Gateway, Arlington, VA.
- 29-Oct 1 Northeast Expositions Inc., Chestnut Hill, MA. **CP/M '83** East Hynes Auditorium, Boston, MA.

October

- 3-6 IEEE Computer Society, Silver Spring, MD. **8th Data Communications Symposium** Cape Cod, MA.
- 5-6 DeNardi Enterprises, Los Altos, CA. **Compusource '83** Red Lion Inn, San Jose, CA.
- 7 Creative Learning Association, Charleston, IL. **Compucon '83** Martin Luther King University Union, Charleston, IL.
- 7-9 **Great Southern Computer and Electronics Show** Expo Center, Orlando, FL.
- 7-10 Institutes for Human Resources Inc., New Smyrna Beach, FL. **The Electronic Village Expo 83-84** Tupperware Convention Center, Orlando, FL.

- 8-9 Tidewater Radio Conventions Inc., Portsmouth, VA. **Computer Convention/Flea Market** Virginia Beach Pavilion, Virginia Beach, VA.
- 16-18 Texas Association for Educational Data Systems, Austin, TX. **TAEDS 1983 Convention** Hilton Hotel, Austin, TX.
- 18-19 Architecture Technology Corp., Minneapolis, MN. **Conference on Local Computer Networks** Hilton Inn, Minneapolis, MN.
- 18-20 IEEE Computer Society, Silver Spring, MD. **EdComp-Con '83: Applying Technology to Education** Red Lion Inn, San Jose, CA.
- 19-21 Raging Bear Productions, Corte Madera, CA. **National Software Show** Trade Show Center, San Francisco, CA.
- 22 Plymouth State College, Plymouth, NH. **Conference on Computers and Education** PSC campus.
- 23-26 George Washington University Medical Center, Washington, DC. **7th Annual Symposium on Computer**

- 24-26 **Applications in Medical Care** Convention Center, Baltimore, MD.
- 24-26 American Institute of Aeronautics and Astronautics, Orlando, FL. **Computers in Aerospace Conference** Hartford, CT.
- 24-26 Association for Computing Machinery, New York, NY. **ACM '83** Sheraton Centre, New York, NY.

November

- 1-4 American Production & Inventory Control Society, Falls Church, VA. **26th Annual International Conference** Hilton Hotel, New Orleans, LA.
- 7-9 IEEE Computer Society, Silver Spring, MD. **24th Annual Symposium on Foundations of Computer Science** Tucson Marriott, Tucson, AZ.
- 10-12 Northeast Expositions Inc., Chestnut Hill, MA. **North-east Business Computer Show and Software Exposition** Hynes Auditorium, Boston, MA.

Coming Next Month

Ever feel that you're getting older while people around you stay the same? Turn the tables on them with the October *80 Micro*—there's a relativity program that tracks the time and age difference between you, traveling in a spaceship at nearly the speed of light, and a friend left behind on Earth.

The issue's theme is science, and relativity is just the beginning. Model I/III/4 astronomers will appreciate a seasonal sky display, that shows the night sky and indicates desired targets (such as Virgo, the Big Dipper, or Polaris), and a program that keeps your telescope in sync with the Earth's daily rotation.

You shouldn't look at the sun, but we've got a program that tells its altitude and azimuth from any location at any time.

For business users, there's a business trend forecaster and a financial health analyzer. Assembly-language Model 16 programmers can study a tutorial on the 68000, and people who hate decimals can try a utility that accepts and displays numbers in fractions.

Finally, the month's game lets you take a dangerous ride on a Spacefly. Spaceflies don't approach the speed of light; in fact, as you play you may find yourself aging rapidly. ■

The Business Of Planning

You can triumph over your business planning problems with this Monte Carlo analysis program.

Your business is thinking about buying some capital equipment. But because you don't know what interest rates are going to do over the next three months, you're not sure how to finance it. How do you make the statistical approximations needed to let you go ahead with the purchase?

This Monte Carlo simulation can help. By using distributed variables, it will give you a more realistic scenario than worst-case analysis. And it will handle computations that are too unwieldy to do manually.

Take the above example. The interest rate is currently 18 percent. Over the next quarter, the rate might rise to 19.8 percent or fall to 16.2 percent.

A worst-case analysis would use the extremes of the vari-

able (19.8 and 16.2) to give you the answer. Monte Carlo handles the interest rate as a distributed variable, which is a variable number with a nominal (or average) value and a range of values less than and greater than the nominal that the variable number might assume.

In real life, an interest rate variable has both a tolerance and a distribution. (Tolerance represents the range of values the variable can assume, while

DEALER INQUIRIES INVITED!

the distribution is the probability of a particular value occurring.)

Thus, while the interest might vary from 19.8 to 16.2, it's more likely to remain around the nominal, 18. You can describe this with a statistical distribution known as a normal curve (see Fig. 1).

The program randomly varies each assigned distributed variable about its nominal value according to the associated tolerance and distribution. The program calculates each variable independently, then determines an outcome by using these variables in the set of equations that defines the problem.

Monte Carlo runs many trials, records each of the results, and checks for limits. It might repeat this procedure several hundred times. Finally, the program evaluates the results of all the trials and calculates a probability to determine the answer.

Variable Types

You must define your problem within the system's constraints, using three unique types of variables to describe the environment.

Distributed variables describe a number that varies over a predictable range. Enter it in the form:

Name, Nominal Value, Plus Tolerance, Minus Tolerance, Distribution

The name is a descriptive identifier from one to six characters long. For equation calculation, the program uses it in place of the actual number.

The nominal value is the numerical base for the tolerance calculations, the number the variable will most likely assume. The plus tolerance is the percent above the nominal that you let the value reach. The minus tolerance is the percent below the nominal that you let the value reach.

The distribution ranges from zero to five and describes how close to the nominal the majority of values lie. Zero defines a flat distribution and five is a narrow distribution (see Fig. 2).

The program randomly varies the distributed variables for each Monte Carlo trial. In a worst-case analysis, the pro-

gram holds these variables at their extreme tolerances while it calculates the statistical variables. Sensitivity analysis determines the extent of the effect that the individual distributed variable has on each statistical variable.

The second category of variables, constant/calculated, has a dual purpose. You can use them as constants, variables whose values don't change, by entering them in the form:

Name, Value

Name is from one to six characters long. The program equations use it in place of the associated number. For instance, you might want to define an interest rate as: Rate, 19.2. In this case, every time the program sees Rate in an equation, it substitutes 19.2. This might be useful for documentation, although

"This program calculates two sensitivity numbers. . ."

you can use 19.2 directly in an equation.

This type of variable is more frequently used as an intermediate calculated variable. To use it in this form, enter the number as:

Name, 0

When the program finds this variable to the right of an equals sign in an equation, it calculates the value of the expression to the left and uses that value to replace the zero. Whenever the program encounters the name in an equation, it uses the new value.

The program uses statistical variables to calculate its statistics. Enter them in the following form:

Name, High Value, Low Value

Name is from one to six characters long and identifies the associated variable.

You set the high value as the absolute upper limit of the statistical variable. As the program calculates each value, it keeps track of how many values fall

The Key Box

Model I and III
48K RAM
Disk Basic

higher than the limit. Then it calculates the percentage of the total.

This occurs in a similar manner for the low value. In addition to the percent over and under the limits, the program calculates the standard deviation, mean value, and highest and lowest numbers found out of all trials. The program does this in turn for each variable defined as statistical.

Equations

The program's heart is in the equation definition; it does all the calculations. By using the three variable types and relating them to each other with mathematical symbols, you can simulate general systems.

The computer evaluates each equation from left to right. The operators, or mathematical symbols, have no predefined precedence, so the program evaluates the leftmost operator first and the rightmost operator last. Consequently, the equals sign must be the last mathematical symbol encountered in the equation.

For instance, assume you want to find the payback on a simple interest loan. You write the equation as follows:

$$\text{Rate} * \text{Amount} + \text{Amount} = \text{Paybck}$$

Notice the equation's syntax. It starts with a variable, followed by an operator, then another variable, and so on until the last part consists of an equals sign followed by the variable you wish to find.

You've previously defined the variables Rate and Amount. Paybck is either a constant or statistical variable; the value of the expression immediately to its left determines its value. Note the space between each variable and the fol-

Figure 1. Uniform distribution and normal distribution.

Figure 2. Distribution ranges from zero to five.

lowing operator. It lets the program distinguish correctly between the two.

Assume that Rate is a constant variable with a value of .18 (18 percent), and Amount is a constant with a value of 100. The program starts its evaluation on the left by multiplying the rate times the amount. Then it adds that sum to the previous amount. The program transfers the answer to the variable called Paybck.

The program's math operators are the four basic functions, + - * /, and five special functions:

INT TAN SIN COS ABS

The INT function truncates a floating point number to the integer portion, without a rounding operation. TAN, SIN, and COS are the standard trigonometric functions calculated in radians. The ABS function converts a number to its absolute value (makes it positive).

To take a number's sign and divide it by another, use the following equation:

SIN Number / Other = Ans

The program calculates and treats each special function and the variable

following it as a single variable.

For instance, to add a number to another number's integer, you'd use the following equation:

Num1 + INT Num2 = Ans

Notice how the program treats the function INT and the variable following it, Num2, as one variable. Only one operator (+) appears before and one operator (=) after the group.

You also have a comment function. The > character denotes the beginning of a comment. You can place it at the beginning of a line (in place of an equation), or at the end of a line (after an equation):

> This is an example of a comment
Num + Var = Ans > Here's a comment

The program ignores text following a >. Note that you need a space after the >, just like any other operator.

Entering Data

The program accepts data in one of two forms. When you first run it, the program asks whether you want to retrieve data from a disk file. If so, enter

the file name. The program reads the data from the specified file into its memory (see sidebar for the disk data format). The program normally creates this data at the end of a session.

You can also enter data from the keyboard. The program asks you to enter values for each type of variable and all equations you want the program to use.

A prompt requests the number of distributed variables you wish to enter. Don't worry if you make mistakes entering the data. The editing features let you add, change, or delete. Enter the variables one at a time until all distributed variables are in the proper form.

Next enter the number of constant or calculated variables you want to use. It helps to define the problem before you begin entering so you know how many variables you're going to need. Enter the variables in the standard form described earlier.

When you enter the statistical variables, specify a generous amount. The program uses only those input here in the statistical calculations. First enter the number of variables you'll use, then the variables themselves in the proper form.

Your last input items are the equations. The number of equations directly affects the program's cycle time; the more equations you enter, the longer it takes to finish the calculations.

For instance, if you specify 250 trials and the program takes one minute per cycle (because of the number of equations), the complete run would last around four hours. This is not unusual, due to the inherent speed of the Basic interpreter.

Comments, however, don't take up much computation time and make the equations much more readable. You should try to use highly descriptive names for the variables.

Editing

Much of the program's power and flexibility come from its editing capabilities. Once you enter your data, the program enters the edit mode. (If you enter data from the disk at start up, the program bypasses edit and asks for the number of trials.)

The first screen in this mode is an edit menu (see Fig. 10). Choose the proper group number to add, change, or delete variables or equations. When you choose a group, the information as it currently exists appears with a corresponding number on the screen. This is the data edit mode.

Choose a line number to display a

the GOLD kit

New Life for your TRS 80 Model I

- Memory Faults?
- Programs Freezing Up?
- Worn Contacts?

The Model I is a good computer, but it is getting old. Your expensive gold connectors have to transmit data through the Mod I's worn and oxidized PC board contacts. With the **GOLD KIT** and fifteen minutes you can upgrade these old tin contacts to gold.

These new connectors are soldered onto the tin plated edge contacts of your computer and expansion interface. You need just a screwdriver and soldering iron.

The kit includes all six connectors and detailed instructions.

Send \$29.50 Check or Money Order to:

P.O. Box 2167
2445 N. 50th Street
Milwaukee, WI 53201-2167

Wisconsin Residents add 5% sales tax.

Finally, a Spelling Checker that can SPELL!

- ☐ 50,000 Word Dictionary
- ☐ Displays Correct Spellings
- ☐ Hyphenates Automatically
- ☐ Grammar & Style Checker

INTEGRATES into 7 different word processing programs, (SuperScripsit, Scripsit, Newscript, Lazy Writer, Electric Pencil, Copy Art, Superscript).

SINGLE KEY OPERATION: You need only press a key and in moments, Electric Webster can actually be saving, proofing, correcting and hyphenating your text—all automatically.

50K WORDS AND MANY MORE: You can view words in context, or add them to your dictionary at the stroke of a key.

VERIFIES CORRECTIONS: If you think you know the correct spelling of a word, EW will check it for you before it makes the corrections.

DISPLAYS DICTIONARY: If you don't know, EW will look up the correct spelling for you, and display the dictionary.

FAST CORRECTING: In as little as 30 seconds, Electric Webster can return you to your Word Processing program, with your text fully corrected and on your screen.

LOW PRICES

TRS-80	Electric Webster	\$ 89.95
	w/Correcting Feature	\$149.95
	Hyphenation	\$ 49.95
	Grammar & Style Checker	\$ 49.95
CP/M or MS/DOS	Electric Webster	\$209.95
	(includes Correcting Feature and Hyphenation Option)	

"The Cadillac of Spelling Checkers!"
'80 Microcomputing, September 82

"Electric Webster is the best. Just read any review in any magazine and I don't believe that you will find even one disagreement to that statement." *Cincinnati's TRS-80 Users Group, April 1983*

"Actually, Electric Webster is faster than its predecessor (Microproof) . . . and spelling corrections are immediately verified against the dictionary before being accepted . . ." *Microcomputing, September 1982*

"My spelling book is now gathering dust. Electric Webster not only checks spelling, displays words in context and corrects errors in the text, but it will also immediately take you to the right place in a 50,000 word dictionary so you can check the correct spelling for yourself." *Info World, August 1982*

"In my opinion, the perfect combination is Correcting Electric Webster with the hyphenation and grammar add-ons. To my surprise, it fills every reasonable expectation. It is fast, easy to use and accurate." *Desktop Computing, December 1982*

VOTED #1: If this sounds too good to believe, you don't need to take our word for it. Take the word of the thousands of *80 Micro* readers who voted Electric Webster the #1 spelling checker. Take the word of the scores of professional software reviewers who have raved about Electric Webster. Or, ask your local computer or software dealer for a demonstration, and see for yourself!

CORNUCOPIA SOFTWARE

Post Office Box 6111 Albany, California 94706 • (415) 524-8098

copy of the line at the bottom of the screen, and enter the line edit mode.

The arrow (cursor) appears above the text to be edited, starting at the leftmost character. By typing from the keyboard, you can overwrite characters that are in the cursor position. The program increments the cursor after each keystroke, so you can completely retype the whole line or any portion of it.

You can also move the cursor without destroying the characters it indicates. Using the left-arrow key, you move the cursor one space to the left with each depression. When the cursor is in the leftmost position, additional keystrokes have no effect. The right-arrow key moves the cursor one character to the right in the same manner.

By using shift right arrow or shift left arrow, you move the cursor immediately to the rightmost or leftmost position respectively. Two other features in the line edit mode are insert and delete.

Enter the insert mode by pressing the up-arrow key. At the cursor position, the program enters all characters you type. The line separates to let you insert without overwriting existing characters. Pressing any other edit key removes the program from the insert mode.

Use the down-arrow key to delete any character located directly under the cursor. The rest of the characters move left to fill the void created by the deletion. Successive pressing of the down-arrow key deletes multiple characters. You can also use the clear key to delete all characters from the current cursor position to the end of the line.

The last editing key is the shift up-arrow. Use it any time during the line edit mode to end editing and return to the data edit mode. The program will make no changes. This is helpful if you decide not to change a line after all. To end the line edit and save all changes, press the enter key.

The data edit mode lets you make changes, additions, or deletions to data already entered. For example, suppose that you've entered three distributed variables numbered 1, 2, and 3. To add a fourth variable between numbers 2 and 3, enter 2.5 in response to the prompt below (see Fig. 12).

Insert Line=Fraction — Delete Line=NULL —
Abort Edit='Enter'

This puts you into the line edit mode with all its features and lets you enter another variable. When you press return (ending the line edit mode), the variable list reappears on the screen. The program renumbers the list so the

line you just entered occupies line number 3, and the remaining lines are adjusted accordingly.

To delete a line, enter the number corresponding to the line you want to

delete. When you enter the line edit mode, press the clear key to erase the line, then press return.

When the program relists the data, the line is gone and the remaining lines

```

MONTE CARLO SIMULATION
*****

Do you want to recall data from the disk { Y/N }?
```

Figure 3. Initial program prompt.

```
*****
MONTE CARLO SIMULATION
*****

What is the name of the file you wish to recall? _
```

Figure 4. File name prompt.

Format of Data File

After you enter data into the program for analysis, you have the option of saving that data to disk for future use. The program stores it as a sequential file in the following order:

1. An integer value of the number of distributed variables.
2. A string value containing the name of the first distributed variable.
3. A single precision value containing the nominal value.
4. A single precision value containing the plus tolerance.
5. A single precision value containing the minus tolerance.
6. A single precision value containing the distribution value.
7. The program repeats data #2 through #6 for each distributed variable that data #1 specifies.
8. A single precision value of the number of constant variables.
9. A string variable containing the

name of the first constant variable.

10. A single precision variable containing the value of the first constant variable.

11. The program repeats data #9 and #10 for each constant variable that data #9 specifies.

12. A single precision value of the number of statistical variables.

13. A string value containing the name of the first statistical variables.

14. A single precision value containing the upper limit.

15. A single precision value containing the lower limit.

16. The program repeats data #13 through #15 for each statistical variable that data #12 specifies.

17. A single precision value of the number of equations.

18. A sequential list of all the equations that data #17 specifies follows. The program stores each equation as a string variable. ■

How to chart your company's fortune without spending one

It's a fact. A single chart or graph can tell you instantly what it takes hours to interpret from printouts or other raw data.

Now, with Strobe Graphics Plotters and Software, you can create superb hardcopy graphics directly from your computer. And you can do it for a fraction of the cost of most other systems.

The Strobe System transforms complex data into dynamic, colorful visuals with a few simple commands from your computer. Charts and transparencies that once took hours to produce are plotted within minutes. Information can be presented as bar charts, pie charts, curves or isometrics using a variety of colors, character styles and symbols. And with a resolution of 500 points per inch, the Strobe plotters match or surpass the quality of plotters costing thousands of dollars more.

You can also save and modify your graphics through Strobe's menu-driven programs. A broad selection of software—including programs that plot directly from VisiCalc* and Supercalc** files—is now available.

When the Strobe Graphics System is interfaced to your computer, an 8½x11 inch sheet of paper can speak anyone's language—visually. Visit your local dealer and learn how to start charting your fortunes today. Because a perspective on the present can also be your window on the future.

have moved up one position.

Return to the main menu from the data edit mode by pressing return without entering a number. You can choose another category to edit or go on to the analysis portion of the program (Monte Carlo trials or sensitivity analysis).

Monte Carlo Analysis

When you press the enter key from the main menu, the program enters the Monte Carlo analysis portion of the

program. The computer randomly assigns numbers to each distributed variable within its range, then calculates the statistical variables found in each equation. This process occurs once for each trial you request.

Before the analysis begins, the program asks you how many trials you'll need. You can enter any number from zero to the numerical range of the machine. If you enter zero, the program returns to the main menu and takes no

further action.

The more trials you enter, the longer it takes to complete the analysis. The length of time required for each trial varies depending on the amount and length of the equations. You can estimate about three seconds per equation per trial. If you have 20 equations, the program would take about one minute per trial.

You should limit the number of trials to between 50 and 100 to give best results. Less than 25 will not yield accurate results.

During the course of its analysis, the program keeps you updated as to its progress. On the bottom of the screen, you see the trial number and equation currently being evaluated.

When the program completes the required number of trials, it asks if you want a printout. If you enter Y and a printer is available, the output is directed to the printer as well as the screen. The program abbreviates the screen output due to the 64-column limitation.

The program next asks you to enter a comment line. You can enter any number of characters up to 255 for the program to use as a printout title.

As the program evaluates each equation, it dynamically checks for errors. If it encounters one, it displays a message and halts evaluation (see Table 1 for a list of possible error messages).

If the program encounters an error, you should return to the edit mode and review the equation in question. Check for proper syntax, and make sure you've previously defined all variables in one of the three variable sections.

A sample of a single trial Monte Carlo run appears in Fig. 13. It contains three distributed variables, two constant variables, four statistical variables, and four equations.

The first portion of the output shows the distributed variables, their nominal values (in this case, all had the value of 10), their plus and minus tolerances (5 percent), and their distributions (ranging from DIST1, a narrow distribution, to DIST3, a flat distribution).

I set up this program's variables to directly reflect the state of the distributed variables: I set STAT1 equal to DIST1 in the program's equation section. This is one way to see what is directly happening to the distributed variable.

The printout indicates that as the distribution becomes flatter (going from STAT1 to STAT3), the value the distributed variable assumes deviates further from the nominal, 10.

```

Learn to Program Like a Professional!

THE COMPLETE BOOK OF RANDOM ACCESS & DATA FILE PROGRAMMING

Written for TRS-80™ I, II, & III - IBM™/PC - APPLE™ M/S - OSBORNE™ - HEATH™ - DEC™ - SUPERBRAIN™ - and all Computers using CP/M with Microsoft BASIC™

The best word on disk random access and file handling techniques, this series is intended for everyone — beginning programmers, businessmen and professionals will learn how to create custom programs to handle inventories, mailing lists, work scheduling, record keeping, and many other tasks, while more experienced programmers will learn advanced, professional programming techniques for faster, more efficient data storage and retrieval.

Although random access file handling is a matter of some complexity, the subject has been treated in a simple and down-to-earth fashion, so that anyone with some small familiarity with programming in Microsoft BASIC will be able to cope with the material. Each stage of learning uses a sample program as a starting point. The programs grow in capability and complexity as the books progress into all of the various aspects of file handling and record manipulation. An extensive effort has been made to keep the material coherent and every program line is explained in detail.

Volume I BASIC FILE HANDLING

- The writing of a Menu to summarize program functions
- Screen format for data entry
- The creation of a basic record
- The FIELD and LSET routines for buffer preparation
- Disk storage of random access records
- Changing or editing stored records
- The LPRINT capability from disk using three different formats
- Sorting the random file
- Searching by name or key field
- Search in "next" or "prior" fashion
- Purging deleted records
- Using disk file data for calculations
- Future expansion of data fields
- Using flags to prevent program crashes
- Date setting, printer on-line and many other routines to make a program run like a commercially written program

VOLUME I \$29.95
 Option Vol. I Program Disk
 TRS-80 Model I/III \$29.50
 TRS-80 Model II \$32.50

Volume II ADVANCED FILE HANDLING TECHNIQUES

- Relational database programming
- Comprehensive self-balancing accounting system with printouts
- Hashcoded date file manipulation — (probably the fastest method of data retrieval). Hashing the input key and recovery method explained
- Span-blocking techniques allow creation of records longer than 256 bytes without wasted space
- Blocking & Deblocking
- Shell-Metzner sort
- In-place screen editing
- Recovery of deleted record space
- Alpha-index record retrieval
- Fast machine language/BASIC sort
- Linked list record structure and sort-merge, deleted record removal and file reorganization
- Multi-key file reorganization and record searching

VOLUME II \$29.95
 Optional Vol. II Program Disk
 TRS-80 Model I/II/III \$49.95

You can also see this in the standard deviation of the statistical variable that quantitatively shows you the dispersion from the mean. The STD. DEV. increases from .14 to .18 as the distribution gets flatter.

The high and low values show the

largest and smallest numbers that the statistical variable assumes out of all the trials run. This determines how far outside the limits the variable traveled.

The limits appear under the headings Minimum and Maximum. You set these when you first enter the statistical vari-

able into the program. The percent of values outside these limits appears under the headings %Under and %Ovr.

The next section shows the equations used to calculate the statistical variables. By setting the statistical variable equal to the distributed variable, you can have the output track the distributed variable. Note that equation 1 is a comment line.

The final section shows the constants used in this example. Since STAT4 is equal to the constant, 10, the standard deviation in the statistical section is zero, showing no variation from the mean.

The statistical output consists of several numbers that describe a sample sufficiently to forecast what the whole population should look like in an infinite sample. The larger the sample size, the greater the accuracy.

The mean is the average number in the sample. The closer you get to this value, the more likely it is to occur (see Fig. 1). In a normal distribution, the mean is the curve's highest part.

As you get further from the mean, less of the population will have that value in any one trial. The standard deviation is the percentage of that population that falls in any range of numbers.

```
Enter the equations in the form:
VAR OPER VAR OPER VAR = VAR COMMENT
Where VAR is a previously defined variable followed by a space
and OPER consists of one of the following math operators:
+ - * /
or one of the following trig operators:
LOG SIN COS TAN INT
The functions are in radians and the LOG is natural. Each
operator must be followed by a space. The expression is
evaluated from the left to the right. The COMMENT is ignored.
A null equation (for comment purposes) may be entered by
starting a line with a ' > ' followed by a space.
```

```

Checkbook Maintenance.....Accounts Receivable.....Accounts Payable.....

BUSINESS 100 PROGRAM LIST

NAME DESCRIPTION

1	RULE78	Interest Apportionment by Rule of the 78's
2	ANNU1	Annuity computation program
3	DATE	Time between dates
4	DAYYEAR	Day of year a particular date falls on
5	LEASEINT	Interest rate on lease
6	BREAKEVN	Breakeven analysis
7	DEPRSL	Straightline depreciation
8	DEPRSY	Sum of the digits depreciation
9	DEPRDB	Declining balance depreciation
10	DEPRDDB	Double declining balance depreciation
11	TAXDEP	Cash flow vs. depreciation tables
12	CHECK2	Prints NEBS checks along with daily register
13	CHECKBK1	Checkbook maintenance program
14	MORTGAGE/A	Mortgage amortization table
15	MULTMON	Computes time needed for money to double, triple, etc.
16	SALVAGE	Determines salvage value of an investment
17	RRVARIN	Rate of return on investment with variable inflows
18	RRCONST	Rate of return on investment with constant inflows
19	EFFECT	Effective interest rate of a loan
20	FVAL	Future value of an investment (compound interest)
21	PVAL	Present value of a future amount
22	LOANPAY	Amount of payment on a loan
23	REGWITH	Equal withdrawals from investment to leave 0 over
24	SIMPDISK	Simple discount analysis
25	DATEVAL	Equivalent & nonequivalent dated values for oblig.
26	ANNUDEF	Present value of deferred annuities
27	MARKUP	% Markup analysis for items
28	SINKFUND	Sinking fund amortization program
29	BONDVAL	Value of a bond
30	DEPLET	Depletion analysis
31	BLACKSH	Black Scholes options analysis
32	STOCVAL1	Expected return on stock via discounts dividends
33	WARVAL	Value of a warrant
34	BONDVAL2	Value of a bond
35	EPSEST	Estimate of future earnings per share for company
36	BETAALPH	Computes alpha and beta variables for stock
37	SHARPE1	Portfolio selection model (i.e. what stocks to hold)
38	OPTWRITE	Option writing computations
39	RTVAL	Value of a right
40	EXPVAL	Expected value analysis
41	BAYES	Bayesian decisions
42	VALPRINF	Value of perfect information
43	VALADINF	Value of additional information
44	UTILITY	Derives utility function
45	SIMPLEX	Linear programming solution by simplex method
46	TRANS	Transportation method for linear programming
47	EQO	Economic order quantity inventory model
48	QUEUE1	Single server queueing (waiting line) model
49	CVP	Cost-volume-profit analysis
50	CONDPFOT	Conditional profit tables
51	OPTLOSS	Opportunity loss tables
52	FQOQO	Fixed quantity economic order quantity model
53	FQEOQSH	As above but with shortages permitted
54	FQEOQPB	As above but with quantity price breaks
55	QUEUECB	Cost-benefit waiting line analysis
56	NCFANAL	Net cash-flow analysis for simple investment
57	PROFIND	Profitability index of a project
58	CAP1	Cap Asset Pr. Model analysis of project

59	WACC	Weighted average cost of capital
60	COMBAL	True rate on loan with compensating bal. required
61	DISCBAL	True rate on discounted loan
62	MERGANAL	Merger analysis computations
63	FINRAT	Financial ratios for a firm
64	NPV	Net present value of project
65	PRINDLAS	Laspeyres price index
66	PRINDPA	Paasche price index
67	SEASIND	Constructs seasonal quantity indices for company
68	TIMETR	Time series analysis linear trend
69	TIMEMOV	Time series analysis moving average trend
70	FUPRINF	Future price estimation with inflation
71	MAILPAC	Mailing list system
72	LETWRT	Letter writing system-links with MAILPAC
73	SORT3	Sorts list of names
74	LABEL1	Shipping label maker
75	LABEL2	Name label maker
76	BUSBUO	DOVE business bookkeeping system
77	TIMECLCK	Computes weeks total hours from timeclock info.
78	ACCTPAY	In memory accounts payable system-storage permitted
79	INVOICE	Generate invoice on screen and print on printer
80	INVENT2	In memory inventory control system
81	TELDIR	Computerized telephone directory
82	TIMUSAN	Time use analysis
83	ASSIGN	Use of assignment algorithm for optimal job assign.
84	ACCTREC	In memory accounts receivable system-storage ok
85	TERMSPAY	Compares 3 methods of repayment of loans
86	PAYNET	Computes gross pay required for given net
87	SELLPR	Computes selling price for given after tax amount
88	ARBCOMP	Arbitrage computations
89	DEPRSF	Sinking fund depreciation
90	GPSZONE	Finds GPS zones from zip code
91	ENVELOPE	Types envelope including return address
92	AUTOEXP	Automobile expense analysis
93	INSFILE	Insurance policy file
94	PAYROLL2	In memory payroll system
95	DILANAL	Dilution analysis
96	LOANAFED	Loan amount a borrower can afford
97	RENTPRCH	Purchase price for rental property
98	SALELEAS	Sale-leaseback analysis
99	RRCONVBD	Investor's rate of return on convertible bond
100	PORTVAL9	Stock market portfolio storage-valuation program

You can assume that about 68 percent of the population will lie plus or minus one standard deviation from the mean; 95 percent will lie plus or minus two standard deviations, and 99.9 percent will lie plus or minus three standard deviations. This assumes a sufficiently large sample size.

The high and low values with the corresponding minimum and maximum limits are self-explanatory. When you

use them in conjunction with the statistical descriptors, you can make a good estimation of a problem's outcome.

During the output of the statistical data, the program asks if you want graphical output. If you answer yes, it produces a small bar graph for each statistical variable.

Figure 13 is a sample of a run with a graphical output. The first of the two columns left of the bar graph is labeled

Range. It starts at the value chosen for the variable Minimum value, and ends with the value chosen for the variable Maximum value. Range is divided into 10 equal groups.

The next column, labeled Number, contains the number of trials during which the variable fell into the corresponding range group. The bar graph itself consists of a normalized graph of the results. To the graph's right are the pertinent corresponding statistical results.

Examine the results of the first statistical variable, STAT1, in Fig. 13. The minimum/maximum range chosen for this variable is 9.5 to 10.5. The graph's first line, labeled 9.5, contains all values that fall below but don't equal 9.5. The next line of the graph, labeled 9.6, contains all values equal to and greater than 9.5, but less than 9.6.

This continues for 10 equal groups until you reach the final number, 10.5. The first line labeled 10.5 contains all values equal to and greater than 10.4, but less than 10.5. The last line labeled 10.5 contains all values 10.5 or greater.

The lowest value calculated in this run is 9.66. In the graph, only one value (9.66) fell in the 9.7 category. The graph itself is normalized to 15—the largest number of values out of all categories assumes a value of 15. The program scales all other categories from this value.

Notice that range 10.1 of variable STAT1 contains 27 values. The number 27 also appears on the graph's top border, indicating that the longest line shown (consisting of 15 asterisks) contains 27 values. The next largest cate-

gory (range 10) contains 21 values that correspond to 12 asterisks (the integer value of 21 divided by 27 times 15).

By normalizing the graph in this manner, you keep the number of values always in scale. To the graph's right is the statistical data for the variable previously presented in the statistics output.

Since the range always starts with the minimum value specified for the variable and ends with the maximum value, judiciously select this range during the statistical variable input.

If the range is too large (minimum equal to zero and maximum equal to 100) and the actual high/low values are much closer together (e.g., low value equal to 47.2 and high value equal to 48.9), the resulting graph is meaningless.

You can't change the range after you've run the Monte Carlo simulation and keep the accumulated data intact. If the range is too large, you must begin the trials over again. I recommend that you first execute a trial run of only one or two trials to gauge the magnitude of the statistical variable value.

To reinforce the concept of the statistical variable distribution, you can use the graphical output shown in Fig. 13. Notice that DIST1 (equal to STAT1) has a distribution of five, DIST2 (equal to STAT2) has a distribution of three, and DIST3 (equal to STAT3) has a distribution of zero.

Notice the relative differences in the graphical output of the corresponding statistical variables. STAT1 ranges from 9.7 to 10.3 in a fairly narrow grouping. STAT2 has a broader distribution (more evenly grouped) from 9.7 to 10.5, while STAT3 is a relatively flat grouping from 9.6 to 10.5.

Sensitivity Analysis

You enter the program's sensitivity portion by choosing item 6 from the main edit menu (see Fig. 10). The sensitivity analysis determines the degree to which a particular distributed variable affects any one statistical variable.

For instance, if your equation relates a statistical variable to one distributed variable and one calculated variable, and the calculated variable relates in turn to two other distributed variables, it's difficult to determine which of the distributed variables has the greatest effect on the equation.

The sensitivity analysis places a quantitative measurement on each distributed variable as it relates to each statistical variable. This lets you easily ascertain its contribution to the overall statistical value.

Mechanically, the program operates much as it did for the Monte Carlo analysis: It must make several passes through each equation, varying a different value each time. However, the program individually assigns each variable its worst case tolerance value instead of random values.

The first pass sets each distributed

variable at its nominal value. The screen shows a trial number of zero as the program calculates each equation.

Then the program begins by setting the first distributed variable to its maximum positive tolerance, leaving all other distributed variables at their nominal values. This appears on the screen as trial 1 to indicate that the program is

“The program’s heart is in the equation definition...”

nominal. In this manner, the program makes a quantitative analysis on each individual distributed variable.

Next, the program returns the first distributed variable to its nominal value and proceeds to the second distributed variable. Trial 2 appears on the screen to inform you of the program's progress. This process continues until the program has tested all distributed variables.

At this point, the program shows only the positive effect of the distributed variables. It now repeats the process, varying each distributed variable to its maximum negative tolerance. A minus sign precedes the trial number corresponding to the number of the distributed variable currently being calculated.

The program's last type of calculation is the worst-case analysis. In this mode, it again varies each distributed variable to its maximum tolerance; however, all variables change at the same time.

The program uses the data accumulated during the first part of the analysis to determine which variation (maximum positive or negative tolerance) yields the worst case value for each statistical variable. This process occurs for the worst case positive and worst case negative situations.

This program calculates two sensitivity numbers, relative and actual. The actual sensitivity is a ratio of the percent change in the function's value to the overall change in the element or variable causing that change. The relative sensitivity is a ratio of the percent change in the function to the percent change in the variable.

In the equation $V * 5 / 10 = STAT$, assume that the variable V has a nominal value of 25 with a tolerance of plus and minus 5 percent. Now, you can calculate the actual sensitivity of the variable V with respect to the variable $STAT$.

The program first calculates the nominal value of STAT, or 12.5 ($25 \times 5 / 10$). Then it varies V to its maximum positive tolerance, 26.25 (1.05×25). Next, the program recalculates the equation using the new value for V to arrive at the answer, 13.125 ($26.25 \times 5 / 10$).

Then the program subtracts the nominal value from the new value, divides the result by the nominal, and multiplies by 100 to obtain the percent of change. The actual sensitivity in this example is

+5 percent. A 5 percent change in V yields a 5 percent change in STAT.

However, if V has a nominal value of 25 with a plus and minus tolerance of 10 percent, the actual sensitivity is 10 percent because it's a measure of the function's overall change.

On the other hand, you use the relative sensitivity for a comparison between two variables. It's a measure of a percent change's effect in the variable, not overall change. The program divides the actual sensitivity value (5 percent) by the variable tolerance (5 percent) to obtain the relative sensitivity (1 percent).

Even if the function's overall change increases by 10 percent, the relative sensitivity remains at 1 percent. This determines which variable is most sensitive to change regardless of its tolerance.

Figure 14 is a sample printout of sensitivity analysis results. The example's data is the same as that in the Monte Carlo analysis printout. The printout's first line lists the variable the program is currently examining, along with its nominal value. This occurs for each statistical variable.

Next are headings to describe the data. One column is for the distributed variable. The next column indicates statistical value (the value the statistical variable assumes when the program takes

the corresponding distributed variable to its extreme), relative sensitivity, and actual sensitivity for both positive and negative cases.

In the first case, STAT1, the statistical variable was sensitive only to variable DIST1 because DIST1 is the only variable involved in the equation with STAT1 (DIST1 = STAT1). When the program varies DIST1 by 5 percent, it also varies STAT1 by 5 percent, as the actual sensitivity value indicates.

Note that the percent change in the statistical variable for a percent change in the distributed variable (relative sensitivity) is 1 percent. This follows for the minus tolerance as well.

You can see the same kind of results for the corresponding distributed variables in the other cases, with the notable exception of STAT4. In STAT4, none of the distributed variables affected the statistical variable in the associated equation 10 = STAT4.

While the sensitivity analysis shows the effect of varying one distributed variable while keeping the others constant, the worst-case analysis varies all the distributed variable to create the worst possible condition. This occurs for both the worst positive and worst negative conditions.

The results of this calculation follow

PRO FOOTBALL

The Gold Edition

POINTSPREAD PREDICTION SYSTEM

AVAILABLE FOR:
APPLE
TRS-80 MODEL I & III
IBM PC

THE GOLD EDITION

THE MOST SOPHISTICATED SYSTEM EVER DESIGNED
 FOR THE PREDICTION OF PRO FOOTBALL POINTSPREADS

If you're looking for a PROFESSIONAL pro football prediction system, then take a look at THE GOLD EDITION. THE GOLD EDITION is the most sophisticated pro football pointspread prediction system ever designed. THE GOLD EDITION is not a game — its recommended only for the serious pro football handicappers. From weeks 6 to 16 during the 1980 and '81 seasons THE GOLD EDITION has been a proven WINNER IN ALL CATEGORIES over the Las Vegas Line:

SEASON	FAVORITES		UPSETS		TOTAL		TOTAL GAMES
	HOME	AWAY	HOME	AWAY	HOME	AWAY	
1981 SEASON:	57%	80%	63%	70%	59%	71%	154
1980 SEASON:	53%	67%	70%	66%	61%	66%	154
TWO YEAR AVG:	55%	73%	66%	68%	60%	68%	308

THE GOLD EDITION ALSO FEATURES.....

- Completely Menu Driven Screens
- Easy to Use Commands
- Accesses One or Two Disk Drives
- Requires Only 10-15 Minutes to Update
- Includes Two Seasons of Data
- Can be Used Year After Year
- Predicts Real or Hypothetical Games
- Predicts Accurate Pointsreads
- Predicts Accurate Over/Under Scores
- Can Generate 20-35 Pages of Analysis Weekly
- Hardcopy Reports Include....
 - Full Season Schedule
 - Team Performance Detail Analysis
 - Team Performance Summary Analysis
 - YTD Divisional Standings
 - Computer Prediction Analysis
 - Pointsread Differential Graphing
 - Over/Under Differential Graphing

STOP GAMBLING.....THE GOLD EDITION provides the highest quality of information necessary to beat the Las Vegas Line. Retail price includes THE GOLD EDITION System Diskette, Data diskette with two years of data, and over 100 pages of comprehensive documentation with padded leather-like binding \$199.50

TURN YOUR COLOR COMPUTER ON TO THE POWER OF FLEX

NOW FROM THE WORLD'S LARGEST SUPPLIER OF SOFTWARE FOR THE FLEX OPERATING SYSTEM COMES FHL COLOR FLEX. JUST LOOK AT THESE FEATURES:

IF YOU ARE TIRED OF NO DISK SOFTWARE, THEN FHL COLOR FLEX IS THE ANSWER!

FLEX is the world's most popular operating system for the 8800 and with over 150 programs we are the largest supplier of serious software for FLEX. These programs range from word processors thru business applications to software development tools. Many Fortune 500 companies use our software. FHL Color FLEX turns your Color Computer into a powerful system more capable than systems costing several times as much.

*FLEX is a trademark of
Triton Systems Consultants, Inc.

FLEX NOW ONLY ~~\$99.00~~

- NEW "Ted" Tiny Editor
- NEW "ISM" Tiny Assembler
- NEW - Machine language monitor
- Hi-Res screen formats - 16 x 32, 24 x 61 upper and lower case, 24 x 64 and 32 x 64 upper case
- Advanced disk I/O and terminal capabilities-supporting 35, 40 and 80T signals or double aided, single or double density drives
- No additional hardware required.

**SPECIAL:
FHL

INTRODUCING THE IMPROVED LNW 80 MODEL II ... AT AN UNBELIEVABLE PRICE!

This computer has it all! TRS-80™ Model I and CP/M® software compatibility with two operating systems; DOSPLUS 3.4 and CP/M 2.2. The LNW 80 MOD II can read and write the 5¼" disk formats of several CP/M computers including: OSBORNE, KAYPRO, XEROX 820, CP/M 86 as well as standard 8" IBM format. Standard features: 96K of RAM, parallel and serial ports, cassette and joystick ports, RGB and Composite Color interfaces, HI-RES graphics and much more! Six month warranty.

\$1995.

SYSTEM SPECIAL!

Amazing price on the **EAGLE III Computer ... \$3499.**

System includes: 10 Megabyte hard disk and one double sided floppy disk drive, 32 preprogrammed function keys for word processing, word processing (Spellbinder), financial analysis (Ultracalc), CP/M 2.2, CBASIC.

Optional Software:

Accounting Plus **\$2000.**

SAVE \$1225! \$775.

PRINTER SPECIALS!

New TOSHIBA P1350 dual mode printer
• 100 CPS letter quality and 160 CPS draft quality **\$1595.**

C. ITOH F10 40 CPS • bi-directional daisy wheel printer **\$1379.**

New SEIKO GX-100 • 50 CPS dot matrix printer with built-in tractor feed **\$244.95**

*This is a Price Breakthrough!

OKIDATA 83A **\$669.**

• 120 CPS dot matrix printer with tractor feed.

PROWRITER parallel
10" **\$469.**
PROWRITER parallel
15" **\$679.**
EPSON MX-100 **\$649.**

SOFTWARE SPECIALS!

SUPER™ \$244.95

Data base management system.

• 13 times faster than dBASE II™, this is the most powerful, easy to use DBMS program that we have seen! For TRS-80 and CP/M.

THE FINANCIAL PLANNER \$479.

• New from Ashton-Tate, this is the strongest financial modeling language available.

INFOTAR \$387.

• New from MicroPro®, now you can write custom applications with plain English and edit your reports with WORDSTAR!

THE BOTTOM LINE

STRATEGIST \$295.

• New from Ashton-Tate, this is the finest econometric tool available today for developing financial and marketing strategies.

ACCESSORY SPECIALS!

LNW ½ doubler **\$159.**

LNW ¾ doubler with

DOSPLUS 3.4 **\$175.**

LNW expansion II **\$329.**

TEC DISK DRIVES:

5¼" double density drives w/case & power supply **\$245.**

MITSUBISHI DISK DRIVES:

2 thin line drives in one case

w/power supply — **\$995.**

3.2 MEG OF STORAGE! **\$995.**

MicroPrice

We're the helpful, friendly computer wholesalers that sell direct to users by mail only. No showrooms. No toll-free numbers. Just the best prices you'll find anywhere.

All prices quoted are cash discounted prices. We also honor Mastercard, Visa, American Express and Company purchase orders.

CP/M is a trademark of Digital Research Corp.; TRS-80 is a trademark of Tandy Corp.; dBASE II is a trademark of Ashton-Tate; SUPER is a trademark of I-S-A, Inc.

Prices are subject to change without notice. Quantities are limited.

80 MICRO's REVIEW GUIDE

The guide that will save you time and money. You'll spend more time at your computer and less money for the right product.

80 Micro's Review Guide is the most comprehensive collection of TRS-80* reviews ever compiled in book form. You get 500 hardware, software and book reviews packed with information about:

- Modems
- Games
- Word processing and business programs
- Joysticks
- Books on programming
- Printers
- Utilities
- Editor/Assemblers
- Educational software
- Monitors
- Databases and more.

Don't waste valuable time chasing down the right product. We've done it for you with 80 Micro's Review Guide, compiled and condensed from the pages of 80 Micro, the magazine you've come to rely on.

A five-star rating system lets you decide what's best. And each review gives you the product manufacturer's information so you can order and receive your product fast.

All for \$7.95

Order now. Use the attached order form, or the coupon, or call toll free 1-800-258-5473.

YES, I want to save time and money.
Send me 80 MICRO's REVIEW GUIDE today.

TRY
US!

ARE YOU A DREAMER? IMAGINE THIS...

You place your order and it arrives when expected. "What do you know, they did ship that day!" You open your package and SURPRISE, it's what you ordered, not last year's version six times removed. "Wait a minute, I must have paid full retail to get this kind of service. H'mm, that's not it. These prices are among the lowest. What's the catch? I've got it! They charged me large shipping and handling charges. No, not that either. It says here 'Free shipping within the Continental 48 States via UPS ground.' Only the differential is charged for UPS Blue or 1st Class. Now I've got it, it's only a dream!!!"

At Micro Images your dreams become reality! How do we do it? Simple, we tell the truth. If the item you order is not in stock — we tell you. If we can't ship that day — we tell you. Which version? We tell you. Why are we telling you this? The answer is easy. This is what we do best and what separates us from the competition, AND WE WANT YOU TO KNOW.

Continued from p. 93

two variables, size of the resistor and size of the capacitor, assuming a constant battery voltage.

First consider the problem's components. The battery produces a constant voltage of 9.0 volts. The resistor is 10,000 ohms and has a manufacturing tolerance of plus or minus 10 percent. The capacitor is .22 microFarads, which you can express as .22 times 10 to the minus six (.22E-6) Farads and has a tolerance of +50 and -20 percent. The switch does not enter into the calculations.

In defining the variables, use the following set-up:

```

CONSTANTS: BATT,9          (Battery)
DISTRIBUTED: RES, 10000, 10, (Resistor)
            10, 3
CAP, .22E-6, 50, (Capacitor)
            20, 2

```

To find how long it takes the capacitor

to charge up to a specific voltage, use the following formula:

$$T_c = - \ln \left(1 - \frac{\text{Output } V}{\text{Applied } V} \right) \times R \times C$$

In this equation, the charge time (T_c) equals the negative of the natural log of the quantity in parentheses, times the resistor value (R) and times the capacitor value (C). Due to the program's limited mathematical evaluation power (it cannot use parentheses), you must break the equation above into several equations to input.

Call the output time (T_c) TIME and define it as a statistical variable, since it's the value with which you're ultimately concerned. The equation would appear as in Table 2.

The first equation evaluates the division within the parentheses. The second equation completes the rest of the calculation within the parentheses, and the

last equation finishes the remainder of the original equation.

Notice that you have to create two intermediate calculated variables to simplify the equation (Ratio and CVolt). You must define these in the variable section before using them in an equation.

Note also the way you create the negative of the log function by subtracting it from zero. The program would flag a negative sign by itself as an error.

Now enter into the computer all the variables and equations as previously defined. You have four constant/calculated variables, two distributed variables, one statistical variable, and three equations. Return to the main menu and enter the edit mode by pressing keys one through four.

To run the Monte Carlo analysis, press the enter key. The program asks for the number of trials; enter 50 to begin. As the program executes, the trial number and the equation the computer is currently calculating appear at the bottom of the screen.

When it completes the analysis, the program asks if you want a printout. If you have an attached printer, you can answer yes. Your printout will be similar to Fig. 16.

The first printout line is the title you

We sell them for less since we make them ourselves. Do you really like the mess and inconvenience of unwinding and dumping this type ribbon into a wastebasket or out on a new paper and/or winding it into your cartridge? We don't know why these are being sold. Computers should simplify your life, not make it more complex just to save a few pennies. You are welcome to order these if you cannot afford our EZ-LOAD ^{Im} INSERTS, RELOADS, or NEW CARTRIDGES. But BEWARE! You now know how to avoid disappointment. One more caution: be sure to check the length of any ribbon BEFORE you buy it. For instance, an MX-100 ribbon should be 30 yards long, not 20 as in the MX-80.

WORRIED ABOUT ORDERING BY MAIL? Relax. We've been in business for many years and can please the smallest and largest account. You receive some of the finest ribbons available made of our own exclusive IMAGE PLUS + im fabric and carbon film. Our ribbons fit your printer exactly. COMPARE, but BEWARE! We order all our competitor's products and are amazed at what we get. Have you ever received a new fabric ribbon you had to unwind and dump out on the table before you could use it? We have. Or, carbon film inserts that had no end-of-ribbon sensor? Or, cartridges with only HALF enough ribbon WITHOUT a Mobius Loop? (No bargain at ANY price!) We use the latest state-of-the-art production equipment and are blessed with a fine, dedicated staff. We guarantee everything we make, period. Our ribbons are made fresh daily and our goal is to ship your order within 24 hours. Write for our brochure, price list, and newsletter, INK SPOTS™.

assign when the program asks for a comment line prior to the Monte Carlo analysis display. Next the program lists the initial values of the distributed variables. The plus and minus tolerances are in decimal form.

The next section shows the actual statistical analysis. The number of trials run appears, followed by a summary of each statistical variable. The mean is the arithmetic average of all the trials run.

The Std. Dev. is the standard deviation of the mean, the measure of how close each value is to the calculated mean. The smaller this number, the more closely the values group around the mean.

The high value and low value in the sample are records of the highest and

lowest values the program calculated for that variable over all the trials. This gives you an idea of the range of values. As the number of trials increases, these numbers approach the worst case values calculated in the sensitivity analysis.

The minimum is the lower limit you set when you enter the statistical variable. The percent under is the percent of values that fell below the limit during calculation of this variable. The maximum and percent over are the upper limits and percent over that limit respectively.

The sample printout also shows a graphical representation of the statistical section. The program automatically calculates the range using the minimum and maximum limits.

The number right of the range shows the number of values less than or equal to that range but greater than the previous range. When you total them, these numbers should equal the number of trials run.

Following the graphical sample is a list of equations used in the calculations. Last is a list of constant or calculated variables.

Note that the numbers after Ratio and CVolt are not the numbers you initially entered because they're calculated variables. They appear on the right side of an equation. The number you see is the one the program calculated for this variable on the last trial run. This number might change, depending on other variables in the equation.

This information indicates that you have a large distribution of values over the entire range in question. Five percent is under your minimum limit, and 15 percent is over the maximum.

The lowest value recorded was $7E-04$ or .0007 and the highest number recorded was $1.3E-03$ or .0013—not that far from the limits of .0003 to .0010. A small change in the tolerance of your parts should get you in range.

A sensitivity analysis would reveal which of the two components affects

CONSTANT/CALCULATED:	BATT,9	(Battery voltage)

One size does not fit all. Our cases are designed for specific hardware configurations. When you put your computer in our case, it fits hand-in-glove. Once your equipment is safely inside the attache-style carrying case, it never has to be taken out again. To operate, simply remove the lid and connect the power. To store your computer, disconnect the power, enclose your disks, working papers, and manuals in the compartments provided, and attach the lid. It's as easy as that.

the answer more (is more sensitive). If possible, you should change that one.

Another Problem

Now, imagine a business decision problem in which you're trying to market a new product. You need to invest \$5,000 to bring this product to market. The three factors of uncertainty are selling price, variable cost, and annual sales volume. Each uniquely affects the profit from the product.

For the purposes of this example, assume the product has a one year life, and each of the factors is independent. You need two pieces of information from the analysis to make a more intelligent decision concerning this investment.

First, you need to know what kind of

average return on your investment you can expect from this product. You also need to know how much risk is involved based on the probabilities of achieving different profit levels.

Set the amount of the investment and the price as constant values. The variable cost and volume are unknown values, so they assume a probability distribution. Enter the variables of concern, the profit and return on investment, as statistical variables. The equations reflect the necessary calculations to obtain the profit and return on investment numbers (see Table 3).

After you enter this data, run a Monte Carlo analysis. Figure 17 is a sample printout of 10 trials; I used the same format as for the electronic circuit prob-

lem, but I'll briefly explain the data.

You see that a mean profit of about \$8,000 is what you expect. A mean return of about 60 percent is also within your limits. However, a 10 percent over limit figure appears on both values. The distribution is a little on the high side.

You'd be more competitive if you could cut your price but still maintain your minimum limits. Also, you should tighten your distribution on the profit, an indicator of the venture's riskiness. You can accomplish this by tightening the tolerances on your distributed variables.

Again, a sensitivity analysis would show the variables most sensitive to change and the absolute limits (worst case) of each variable. You should experiment with this problem to determine the optimum values for profit and return.

Remember that the benefit of Monte Carlo analysis over worst-case analysis is its ability to minimize risk through probability. It simulates the real world in a positive manner, instead of clouding your decision with unlikely pessimistic outcomes. ■

CONSTANT VARIABLES:	INVEST, 5000 PRICE, 4.75
DISTRIBUTED VARIABLES:	VARCOST, 4, 1, 10, 5 VOLUME, 10000, 20, 20, 0
STATISTICAL VARIABLES:	PROFIT, 10000, 5000 RETURN, 100, 25
EQUATIONS:	PRICE - VARCOST * VOLUME = PROFIT INVEST / INVEST - 1 * 100 = RETURN

Table 3. Set-up for Business decision problem.

What's the DIF?

by David Haan

Format and print financial statements in one step with the DIF (data-interchange format) file while avoiding typographical errors.

I recently became the caretaker of my church's financial records. One of my duties is to provide monthly statements, in a simple form, for each church leader.

This statement includes a breakdown of the month's receipts, expenditures, and a balance forward (see Fig. 1). I also have to prepare a quarterly state-

ment summarizing the monthly totals for credit and debits to date.

Generating a quarterly report that could be distributed to the general membership sounded difficult. In the past, this report had been typewritten using the general ledger. This method was time-consuming and error-prone; errors made had to be corrected and the

report often had to be retyped.

VisiCalc, the package I chose to keep the church's records, contains an optional data-save format called DIF (data interchange format). A data file can be generated that is directly accessible from a Basic program of your own design. Using this technique, a report can be formatted and printed in one step, with no chance of typographical errors or an incorrectly read entry. See the sample quarterly statement in Fig. 2.

When you save a VisiCalc file using the DIF file option, a specific format is generated that can be accessed by many different languages, such as Pascal, Fortran, and Basic. This format standard, established by Software Arts Inc., is made up of header blocks that indicate the type of information that is to follow (see Fig. 3).

Header Items

Some of the seven different header items are the Table, Vectors, Tuples, and Data headers. When I saved the quarterly report of Fig. 2 as a DIF file, the first part of the file was organized in the format as shown in Fig. 4. In Fig. 4, the first header item is called Table. This header allows verification that the file is a data table. The two numbers following must be a zero and a one with a title string following. In this case, the title

ANYONE'S CHURCH, ANYWHERE, USA. SECOND QUARTER REPORT 1982

Figure 2. Quaterly statement.

The data in the DIF file has the following format:

Type Indicator, Value
String

The type indicators and meanings are as follows:

Type Indicator	Meaning
-1	This type indicates that this is a special type of data. It is either a BOT (beginning of tuple) or an EOD (end of data). BOT or EOD will be in the string field and the value field will be 0.
0	This type indicates that this is numeric data and the data will appear in the value field. The data can be noninteger, signed, and have exponentiation. The string field will contain a V.
1	This type indicates that this is string data. The string data will appear in the string field, with a 0 in the value field.
2	This indicator is a special case and is used to pass special information between programs.

Figure 3. DIF file type indicators.

numeric or string data. You will notice that the first piece of information is a -1,0 followed by BOT. The field where the -1 is located is called the type indicator. Valid type indicators are -1, 0, 1, and 2. Figure 3 contains an explanation of what each type indicator means. As seen in Fig. 3, the -1,0 followed by BOT indicates that this is the beginning of a tuple. This will occur at the beginning of each tuple. The next item in Fig. 4 is a 1,0 followed by the word donations. If you refer back to Fig. 2, you will see that donations is the first piece of data located at the coordinates of the first vector and the first tuple. The type indicator 1 indicates that the data is string data, not numeric, and the number value field equals zero. The next data item of Fig. 4 is preceded by a 1,0, which is followed by Needed/Wk. In Fig. 2, Needed/Wk is at the coordinates of the first tuple and the second vector.

The third data item in Fig. 4 is a 0,793.35 followed by a V. The zero indicates that the data item is numeric and 793.35 is the value. The V following also indicates that the data is a numeric value.

If you continued printing the data beyond the end of Fig. 4, you would see that the data is saved one tuple at a time in the format of tuple 1, vector 1; tuple 1, vector 2; tuple 1, vector 3; and so on, until the entire tuple is saved. The next tuples are saved in the same manner until all of the tuples are saved. The final entry in the file after all the tuples are saved would be a -1,0 followed by EOD indicating the end of data.

This is a brief explanation of the DIF file format, and is only meant to give you the basics. For a complete explana-

is null and the Table header will not be used for anything in this demonstration.

The next header item, Vectors, indicates that the information following will give the number of vectors in the data file. A vector can be thought of as either a row across the page or as a column down the page. Its definition depends on whether the data file is saved in rows or in columns.

I used the vector in its default state, where a vector is defined as a row of information across the page. The number of vectors is indicated by the second

number following the word vectors. In Fig. 2, there are 22 vectors.

The third header item, Tuples, indicates that the information following will show the number of tuples in the data file. As with a vector, a tuple can be a row across the page or a column down the page. In the default condition, a tuple is a column of information. The number of tuples is indicated by the second number following the word tuples and in Fig. 2 it is 13.

The fourth header item, Data, indicates that the following data is either

COLOR COMPUTER SOFTWARE

COMPLETE YOUR WORD PROCESSOR

SPELL—RITE

THE Cassette Spelling Verifier

You've got the best word processor. Now complete your system with the best spelling verifier. Spell-Rite is a convenient, fast way to insure that all of your documents are letter perfect. Spell-Rite was designed specifically for cassette-based word processors. Like Yours!

Spell-Rite is easy to use, completely menu driven.

Spell-Rite is Fast! You can verify a 1000 word document in under 9 minutes - including cassette I/D.

Spell-Rite is complete. It comes with its own 10,000+ word dictionary which you can expand. Also included is a superb manual.

Spell-Rite works with any word processor that generates ASCII tape files, such as Color Scriptsit, Super Color Writer and Telewriter 64. 32K of RAM and Extended Basic are required.

Cassettes and manual \$59.95

DISK BASIC AID

DISK BASIC
MADE BETTER

Your Color Disk Basic is one of the most powerful Basics on any computer. Add Disk Basic Aid and it also becomes one of the easiest to use! The Basic Aid package will make developing and entering Basic programs a snap. Here are just *SOME* of the great features Basic Aid contains.

- Full Screen Editing
- Automatic Line Numbering
- 2 Key entry of Basic keywords
- Cross Reference
- Automatic Key Repeat
- User definable keys

PLUS. Label support! This unique Basic Aid feature is a vast improvement in the Basic language. Label any line you want and use that label in all calls to that line. Forget about line numbers. just call routines by name like this

"ON A GOTD ENTERCHECKS, PAYABLES, EXIT"

A real time saver. And for transportability Basic Aid will convert all labels to line numbers.

These and other great features make Basic Aid a 'must' for anyone who writes or modifies Basic programs. Basic Aid runs on 32K or 64K Disk systems. It comes with complete documentation and our new heavy duty keyboard overlay.

Disk Basic Aid \$49.95

SPECTRUM — STICK

Put the joy back into color computing with the Spectrum Stick. This heavy duty joystick gives you a true feel of control. And it comes with an extra long cable and power on/off LED.

"...the feeling of this joystick is superb." March 1983, 80-Micro

PRODUCTS FROM BREEZE/OSD, INC

tion, you should obtain a supplemental information bulletin from Radio Shack entitled "Programmer's Guide to the Data Interchange Format."

The Listing

The Basic Program Listing accesses the data file, formats it, and prints it. Of particular note are lines 140-510. Lines 150-210 read the DIF file until the Vectors header type is found. (The Label header will be bypassed.) Once the Vectors header type is found (line 180), the number of vectors will be extracted, put in the variable NV and printed on the screen.

Next it searches for the tuples header type. Once it is found (line 190), the number of tuples will be extracted, put in the variable NT and printed on the CRT.

Finally, the Data header type is searched for and when found (line 200), control is passed to a routine that will read in the data (line 350). Here, two loops (one inside the other) are formed using the variables NT and NV to read all the data and place it into variables that will be used for printing the required report. Lines 360-390 look for the BOT while lines 400-450 pick up the actual data.

If at any time an error in the DIF file is detected, an appropriate message will be printed on the screen and execution of the program will be aborted.

You might have noticed that in assigning the data from the DIF file to variables, I did not test to see whether the type of data being accessed was a numeric or string value by checking the type indicator. This was because I knew the vector and tuple location of each string or numeric value by looking at the layout of Fig. 2, and knew that this layout was not expected to change in the foreseeable future. This allowed the code in the demonstration program to be simplified.

If the layout of the DIF file is unknown, or if it will change now and then, you will have to test the type indicator of each piece of data and assign the data to appropriate variables. The remaining portion of the program formats and prints the data. The resultant report printed from this sample DIF file is shown in Fig. 5. A neat and consistent format is printed without the need for typing or corrections. ■

David Haan lives at 4361 Estes St., Littleton, CO 80123.

A portion of the DIF file used in this example is listed below. A portion of the data is missing because it is repetitious and this figure is meant only to demonstrate the basic format of the DIF file.

TABLE	0,1	This header is bypassed by the program

RUN BASIC PROGRAMS AT SUPER SPEED WITH ZBASIC 2.2.

THE WORLDS FASTEST TRS-80 BASIC COMPILER from SIMUTEK

BELIEVE IT OR NOT WE'VE ADDED MORE NEW FEATURES to the ONLY INTERACTIVE BASIC COMPILER for the TRS-80!

1. Speed increases of 10-100 times are typical after compilation.
2. Compiled code can be RELOCATED to run anywhere in memory. Code is even ROMable!
3. ZBASIC 2.2 NOW SUPPORTS BOTH RANDOM and SEQUENTIAL DISK I/O.
4. ZBASIC 2.2 is now a super tool for business programmers: RANDOM ACCESS FILES, and PRINT USING statements are supported as well as a HIGH PRECISION MATH package (with no rounding problems).
5. Special BUILT-IN MACHINE LANGUAGE COMMANDS to increase program operation by as much as 1000 times! Special commands are implemented for fast memory searching (CPDR, CPIR), block memory moves (LDIR, LDDR), inputting and printing HEX numbers, inserting MACHINE LANGUAGE into COMPILED CODE, disabling and enabling interrupts, inverting memory, 16 bit PEEKs and POKEs, and stack control, debug and much more.
6. ZBASIC 2.2 compiles the ENTIRE PROGRAM into Z-80 machine language. (Not 8080 code or a combination of BASIC and machine language like some other compilers.) Clumsy LINKING LOADERS, and RUNTIME MODULES are not needed; ZBASIC 2.2 creates a ready to run MACHINE LANGUAGE program.
7. NO ROYALTIES imposed on registered ZBASIC owners.
8. Typical COMPILATION TIME is TWO SECONDS for a 4K program.
9. Use TRS-80 Basic to write ZBASIC programs!
10. Compile some existing programs with only minor changes. (BASIC programming experience is required.)
11. Fully compatible with both the Model I and the Model III. Mod I compiled programs work on a MODEL III, and vice-versa. ZBASIC works with NEWDOS-80, NEWDOS+, DOSPLUS, LDOS, MULTIDOS, ULTRADOS, TRSDOS etc. (Not TRSDOS Mod I double density)
12. BUILT-IN and much improved MUSIC and SOUND EFFECTS commands.
13. Improved CHAINING for disk users.
14. TIMES now available on DISK version. (Mod I only)
15. ZBASIC 2.2 now has an INPUT @ command (similar to PRINT @).
16. The TAB function will now tab 255 columns on a printer. (BASIC cannot tab past column 64.)
17. NEWDOS 80 2.0 USERS can use the CMD "dos command" function! (DOSPLUS may use name "dos command")
18. NEW and EASIER to use USR COMMANDS.
19. New math functions to calculate XOR and INTEGER REMAINDERS of a DIVISION
20. Logical STRING COMPARISONS are now supported.
21. The disk commands INSTR, MID\$, ASSIGNMENT are now supported on both DISK AND TAPE ZBASIC.
22. DEFSTR is now supported.
23. Eight disk files may be opened simultaneously; random, sequential or mixed.
24. LINE INPUT#, is now supported.
25. Invoke the compiler by simply hitting these two keys: ":-"
26. NEW 60+ PAGE MANUAL WITH DESCRIPTIONS AND EXAMPLE.
27. ZBASIC 2.2 Comes with CMDFILE/CMD program from MISOSYS, to allow appending or merging compiled programs and machine language programs from tape or disk.

ZBASIC 2.2 DOES NOT SUPPORT THESE BASIC COMMANDS:

1. ATN, EXP, COS, SIN, LOG, TAN, and exponentiation. (However, subroutines are included in the manual for these functions.)
2. ERROR, ON ERROR GOTO, ERL, ERR RESUME.
3. No direct commands like AUTO, EDIT, LIST, LLIST ETC, although these commands may be used when writing programs.
4. Others NOT supported: CDBL, CINT, CSNG, DEFFN, FIX, FRE.
5. Normal CASSETTE I/O. (ZBASIC supports it's own SPECIAL CASSETTE I/O statements.)
6. SOME BASIC COMMANDS MAY DIFFER IN ZBASIC. For instance, END jumps to DOS READY, STOP jumps to BASIC READY etc.
7. MEMORY REQUIREMENTS: to approximate the largest BASIC program that can be compiled in your machine (at one time), enter BASIC and type: PRINT (MEM-6500)/2. Remember, you can merge compiled programs together to fill memory.

ZBASIC 2.2 SPEED COMPARISON DEMO

To help give you an idea how fast compiled programs are, we have included this demo program:

ZBASIC 2.2 DEMO PROGRAM

Time to compile and run complete program : 0 MIN. 2 SEC.
BASIC Execution speed MOD 1, LEVEL II : 7 MIN. 34 SEC.
ZBASIC Execution speed MOD 1, LEVEL II : 0 MIN. 18 SEC.
BASIC Program size (WITHOUT VARIABLES) : 895 BYTES
ZBASIC Program size (WITHOUT VARIABLES) : 2733 BYTES

(Remember that the ZBASIC program includes an 1879 byte sub-routine package.) Program shown exactly as compiled and run in BASIC and ZBASIC.

Saving Strings

by David M. Keil

If you type faster than INKEY\$ routines accept data, this program is for you. It keeps pace with even the fastest typists.

When you answer INKEY\$ routine prompts, characters typed in too fast aren't recorded. No matter how tight you make the routine, it never seems to keep up with the average typist. This is because the Model 1/III takes time to verify each character, display it, and then add it to the input string. While the computer goes through this process, you might type in another character, which the computer doesn't register. That's the problem; here's the solution.

How It Works

The computer keeps track of the cursor's location and line 110 PEEKs it out of memory and puts it into Z1. Then it puts a block cursor at the present cursor position.

Lines 120 and 130 check whether a character has been input. The charac-

ter is then converted to its ASCII value and stored in A. Numeric variables are faster to work with than strings.

The program then determines if you've pressed enter. If not, it checks for a valid character. If you've input no character or an invalid one, the program returns control to line 120. If the character is valid, the program POKES a space into the current cursor position and continues to line 140.

Line 140 subtracts 15360 from Z1 to make it a Print @ location and compares it to LC. LC is the starting position of the input. If LC and Z1 are equal, the back arrow is an invalid input.

Then Z1 is compared to LC + IP. IP is the maximum number of characters allowed. If LC + IP and Z1 are equal, all characters except the back arrow are invalid.

If either condition is met, the character is not printed and control returns to line 110. Otherwise, the character prints and control returns to line 110.

Values are stored only on the screen. To put a character into memory, you just move the value from the screen into a string. You could PEEK the value from the screen one character at a time but a long string (20 characters or more) takes a while.

Line 150 is the line that makes this routine different. POKE a space into the current cursor position and add 15360 to LC to make it a memory address so you can compare it to Z1 (the cursor's memory address). Next, use a little-known instruction called VARPTR, which loads the memory address of where A's address is

The Key Box

Program Listing

LIVE WIRES FROM THE UTILITY COMPANY!

INSTANT ASSEMBLER 2.1

The **Instant Assembler** is a powerful assembly language development system for the TRS-80, and our new version is better than ever. If you are already an assembly language programmer, its unique design will greatly increase your productivity. If you are just getting started, there is no better assembler to help you learn machine language programming. Some of its unique features are immediate assembly, which detects syntax errors as source is entered, and a compact source format that allows you to write programs nearly three times as large as other assemblers in the same amount of memory. It produces relocatable code modules that can be saved on disk or tape and linked together in memory for large or modular assemblies. It will also assemble to disk, tape, or directly to memory for immediate debugging with the built-in debugger. You can quickly switch from assembler to debugger without losing your source. The built-in debugger will step through your programs one instruction at a time, showing each disassembled instruction and its effect on the registers and memory. It can even use the symbols in your source code when stepping or disassembling. Our new version will load or save both conventional source files and its own condensed source format.

The **Instant Assembler** package includes six separate programs. The assembler itself includes the editor and built-in debugger. The **Linking Loader** is included in several versions for different memory sizes. A stand-alone version of the debugger (**MicroMind**) is also included. **MicroMind** can be relocated in memory and has commands to single-step, set breakpoints, display or alter registers or memory, find bytes or words, disassemble to screen or printer, convert between hex and decimal numbers, and write **SYSTEM** tapes. The **Instant Assembler** comes with a comprehensive 65 page instruction manual with many examples. Specify Model I or Model III. **TAPE INTASM 2.1** \$39.95 on tape
Specify Model I or Model III. **DISK INTASM 2.1** \$49.95 on disk

INSIDE LEVEL II

The Programmers Guide to the TRS-80 ROMS

INSIDE LEVEL II is a comprehensive reference guide to the Model I and Model III ROMs which allows the machine language or Basic programmer to easily utilize the sophisticated routines they contain. Concisely explains set-ups, calling sequences, and variable passage for number conversion, arithmetic operations, and mathematical functions, as well as keyboard, tape, and video routines. Part II presents an entirely new composite program structure which loads under the **SYSTEM** command and executes in both Basic and machine code with the speed and efficiency of a compiler. In addition, the 18 chapters include a large body of other information useful to the programmer including tape formats, RAM usage, relocation of Basic programs, USR call expansion, creating **SYSTEM** tapes of your own programs, interfacing of Basic variables directly with machine code, and special precautions for disk systems. **INSIDE LEVEL II** was reviewed in the April 1982 issue of 80 Micro which said "The book has no flaws; it is a perfect gem." Byte Magazine said "I recommend this book to serious machine language programmers."

Includes updates for Model III. **INSIDE LEVEL II** \$15.95

DEMON DEBUGGER

DEMON (for Debugger and Monitor) is a new and sophisticated tool with which you can explore and debug machine language programs. It has two modes of operation. In the **STEP** mode, it "emulates" the operation of the Z-80 and allows you to step through any machine language program one instruction at a time, showing you the address, hexadecimal value, Zilog mnemonic, register contents, and step count for each instruction. This ability is extremely useful not only in debugging your own programs, but also for examining how other people's programs work. It will even follow program flow right into the ROMs. **DEMON** leaves the video screen unaltered so that the program you are stepping through can perform its display functions unobstructed. **STEP** mode commands include step (trace), step to a branch, run in step mode at a variable rate, run for a specified number of steps, change flags or registers, execute a **CALL** or **RST**, set breakpoints in RAM or ROM, and break when a number in a defined range appears in any double register. Commands in the **MONITOR** mode (all of which are available from the **STEP** mode) include hex arithmetic, hex to decimal conversion, block move, fill memory, find bytes, jump to address, disassemble to screen or printer, load memory from disk or tape, write memory to disk or tape, full screen memory edit in hex or ASCII, and relocate other programs or itself. **DEMON** also includes a labelling disassembler with **EDTASM** format output to either disk or tape. This will generate source code from programs in memory which can then be altered and reassembled with your assembler. Screen displays may be routed to your line printer for hard copy. Includes a comprehensive 40 page manual with many examples.

Specify Model I or Model III. **DEMON** \$29.95 on tape or disk

DUPLICATE SYSTEM TAPES WITH CLONE

Make duplicate copies of almost any tape including Basic, **SYSTEM**, data lists, assembler source, or "custom loaders". The file name, load address, entry point, and every byte (in ASCII format) are displayed on the video screen. Model III version allows changing tape speed so you can make 1500 baud copies of 500 baud programs like **SCRIPST**. Specify Model I or Model III. **CLONE** \$16.95 on tape, \$21.95 on disk

DISK INDEX VERSION 3

Our excellent disk indexing program has now been entirely rewritten in machine language. **DISK INDEX** will assemble a master index of your entire program library by automatically reading the program names and free space from each disk. The index may then be alphabetized or searched for any disk, program, or extension. It will alphabetize 2400 programs in less than 50 seconds and will find any program out of 2400 in less than 3 seconds. Disks or programs may be added or deleted manually, and the whole index or any selected part may be printed on paper in several different formats. The index itself may also be stored on disk for future access and update. A 48K machine will hold up to 255 disks and over 2400 programs in each index, and you may build as many indexes as you need. There is no limit to the number of filenames it can read on any one disk. It will run on either a Model I or Model III and catalog disks for either machine regardless of which one is running it, though Model I owners must have double density to catalog Model III disks. It will automatically recognize any DOS and disk density. **DISK INDEX** works with any operating system written for the Model I or Model III except CP/M, and is extremely fast and easy to use.

Specify Model I or Model III. **DISK INDEX VERSION 3** \$29.95 on disk

TELCOM

Mumford Micro offers two telecommunications programs. **TELCOM I** has most of the features needed to communicate with bulletin boards, time share systems, or for file transfers between two disk-based micros over modems or direct wire. It is menu driven and extremely simple to use. Functions include transmit a disk file, receive a disk file, save received data on disk, examine and modify UART parameters, 8 programmable log-on messages, automatic checksum verification of accurate transmission and reception, and many more user conveniences. Supports line printers, lowercase characters, Xon/Xoff protocol, and programmable character keys.

TELCOM II is an expanded version of this program for the most demanding telecommunications applications. It maintains the same ease of operation and all the features of our original program, but includes many enhancements. The terminal mode now has a help menu and a large spooler for simultaneous printer output at high baud rates. You can load disk files into the memory buffer from within the terminal mode, type into the buffer, transmit the buffer with a single command, and send files a line at a time. You can even view the buffer or data that has already scrolled off the screen. **TELCOM II** has 10 different 40 character programmable messages that can each be sent with a single command for auto log-on or auto dialing, and the messages can include control codes and delays. It also has 5 different character translation tables for filtering and compatibility with different systems.

TELCOM II also includes an error correction file transfer mode which is compatible with the **LYNC** program available on CP/M systems and the IBM PC. **TELCOM II** will exchange disk files with any computer running this protocol (including another TRS-80 running **TELCOM II**), and will automatically detect and correct errors in transmission. Files can be sent to or fetched from an unattended computer. The extreme ease of use **TELCOM I** is known for has not been compromised. Reconfiguration of the programmable features is done internally from clear menus for fast, easy operation. Both versions of **TELCOM** come with complete instruction manuals, which are available separately for \$5 to help you decide which program is best suited to your needs.

Specify Model I or Model III. **TELCOM I** \$39.95 on disk

Specify Model I or Model III. **TELCOM II** \$69.95 on disk

8748 ASSEMBLER

Assemble programs for the complete Intel MCS-48 family of microcontrollers including the 8741, 8742, 8748, and 8749 on your Model I, III, or IV Assemblies from a source file written on your text editor directly to an object file on disk. It supports the standard Intel mnemonics and features conditional assembly and listing, complete expression evaluation, ten significant characters for symbols, a complete range of pseudo-ops, and informative error messages. It comes with a comprehensive instruction manual which includes the instruction set for each component and sample listings for arithmetic and I/O subroutines. We also offer plans, schematic, and software to help you build your own inexpensive 8748 programmer. The 8748 is a readily available single chip computer that contains RAM, EPROM, clock oscillator, a counter/timer, and 27 I/O lines in a single 40 pin package. A complete computer controller can be built with this one chip, a crystal, three capacitors, and a five volt power supply.

Specify Model I or Model III. **CASM48** \$74.95 on disk

Plans and software for an 8748 programmer \$19.95 on disk

4 SPEEDS FOR YOUR MODEL I

The SK-2 clock modification allows CPU speeds to be switched between normal, an increase of 50%, or a 50% reduction; selectable at any time without interrupting execution or crashing the program. Instructions are also given for a 100% increase to 3.54 MHz. The SK-2 may be configured by the user to change speed with a toggle switch or on software command. It will automatically return to normal speed any time a disk is active, requires no change to the operating system, and has provisions for adding an LED to indicate when the computer is not at normal speed. It mounts inside the keyboard unit with only 4 necessary connections for the switch option (switch not included), and is easily removed if the computer ever needs service. The SK-2 comes fully assembled with socketed IC's and illustrated instructions.

Model I only. **SK-2** \$24.95

quality & service since 1977

stored into A.

Now for the fun. You are going to POKE new values into A\$'s memory addresses to move the contents of video memory into A\$. First you POKE the difference between Z1 and LC into memory addressed by A. This holds the length of A\$, which is 0-255. Next, A+1 and A+2 hold the least-significant byte and the most-significant byte of where A\$ is stored in memory. You now POKE the address where the string is stored in video memory into A\$'s memory addresses.

That's it. Now A\$ contains the values in video memory. In fact, A\$ is actually stored in video memory. All you have to do is assign A\$ to some other variable (in my program, IP\$) and return.

All this seems to be a long process but to the computer it is fast and easy. You have eliminated string addition and subtraction and given your input routine a block cursor. All this makes for a very fast and powerful INKEY\$ routine.

How to Use It

Using this program is easier than knowing how it works. Load LC

where you wish your input to be. Then load IP with the maximum number of characters to be input. Now move the cursor to the correct location on the screen by printing at LC.

The program listed clears the screen and allows input at screen position 512.

*"This program will
work with any INKEY\$
routine and eliminate
those lost characters."*

When you press the enter key the program ends. When it ends, type the following:

PRINT A\$,IP\$

and press the enter key. Whatever you typed should print twice. To find out if A\$ is stored in video memory, list the program and print A\$ again. A\$ contains whatever is on the screen at posi-

tion 512. Now you see why you have to assign A\$ to another variable before returning.

Here are a few more things you need to know before you use this program. Once A\$ is reassigned it will be stored in high memory. So don't worry about using A\$ anywhere else in your program. You can locate lines 110-160 anywhere in your program.

Don't be afraid to modify this program. Only the way of moving the input from the screen is new, so experiment. With a few changes this program allows you to use the shift right and left arrows to let the cursor move over characters without erasing them.

If you want to stop character loss in programs containing other INKEY\$ routines I have another solution. A machine-language buffer utility will allow you to key ahead of your program. This program will work with any INKEY\$ routine and eliminate those lost characters. ■

David Keil (10 W. Wilburn Ave., Greenville, SC 29611) is employed by the Better Software Assoc., where he is vice president in charge of software development.

The Versatile Microprism

by Bradford N. Dixon
80 Micro Technical Editor

The IDS 480 Microprism provides the best features of a dot-matrix tabletop printer and adds the option of near-letter-quality output.

★ ★ ★ ★

The Microprism Printer
IDS Model 480
Integral Data Systems Inc.
Route 13
Milford, NH 03055
Models I and III
\$649

Most printers fall into two categories: letter-quality printers that give a clean, professional appearance to correspondence and other writing projects, and dot-matrix printers with graphics capabilities and other options found only on these units.

Previously, you had to make a choice

between these two types of printers. But the Microprism IDS 480, a dot-matrix printer with a near-letter-quality mode, gives you the flexibility to satisfy most of your printer needs.

Physical Description

The IDS 480 printer (see Photo 1) is an 18.7-pound tabletop unit nearly 16 inches wide, 11½ inches deep, and 4½ inches high. It accommodates 9½-inch fanfold paper, cut sheet paper, and roll paper (mounted on a roller at the rear of the printer). The stepper motor feeds paper at a maximum rate of 3½ inches per second.

The Microprism's case is white with a black dust cover and a clear plastic window for watching text and graphics as they are printed. The dust cover comes

off to facilitate ribbon replacement and to set the DIP (dual in-line package) switches.

When the IDS 480 is viewed from the front (see Photo 2), the printer control panel is on the right. It features a red power indicator light, a green on-line/fault indicator, an on-line/off-line switch, a form-feed switch, and a line-feed/self-test switch.

As you look at the top of the printer with the dust cover removed, you can see the print head strike control lever within easy reach. The snap-in ribbon cartridge and mode-select DIP switches are also accessible.

The platen release lever is at the right rear of the printer's top surface. The power switch and a 25-pin EIA (Electronic Industries Association) interface connector are on the Microprism's rear panel. You can connect this plug to your computer via a serial EIA interface, RS-232C, or a parallel TTL (transistor-transistor logic), Centronics-compatible interface.

Performance

The IDS 480 Microprism is loaded with useful print controls that you won't find in many comparably priced dot-matrix printers.

As a serial printer, the Microprism offers switch-selectable data rates of 300, 1,200, or 9,600 bits per second. It also provides an automatic multiple-line buffer of approximately 1,400 bytes.

The IDS 480 supports the full 96-character ASCII set with true upper- and lowercase characters. Characters are available in two fonts, near-letter-quality and draft quality, at the flip of a switch.

The printer formats the 96 characters in a 24- by 9-dot matrix in the normal mode, 48- by 9-dot in the enhanced mode (double width). You can print up

"...for several years the de facto standard for microcomputer software, and still a good example of some of the better thought-out software on the market." —Interface Age

Desktop Accountant™

FULL-FEATURE, FULLY-INTEGRATED ACCOUNTING SYSTEM

Everything you need to keep the books... at a price you can afford!

Your Bookkeeper, Accountant, and Banker will love you for installing this fine system!

Check these features:

This remarkably-valued Accounting System will manage your company's business records and automate your entire bookkeeping process—from the posting of individual transactions to producing up-to-the-minute Income Statements, Balance Sheets, and other important management reports. Desktop Accountant™ gives you a "Big Company," professional image with printed invoices, statements, and checks. It is user-friendly, completely menu-driven, offers system-prompted data entry, and is compatible with both floppy and hard disks. Feature-for-feature, and dollar-for-dollar it is the best software value on the market! But don't let the low price fool you. Desktop Accountant™ is not a "cheap" accounting system, only inexpensive. That's because original development costs were recovered years ago allowing us to sell an excellent product in high volume at low prices and still earn a fair profit. This high-quality, reliable software was designed and written in 1975 for small-to-medium sized businesses. Since then, it has successfully proven itself in well over 10,000 companies in all 50 states and in 13 foreign countries. It is also used and recommended by hundreds of bookkeepers, accountants and CPAs, including the regional offices of several famous "Big Eight" accounting firms! No other Accounting System offers you so many features, benefits, and valuable extra services. You can pay more but you can't buy more! Desktop Accountant™ is backed by our 30-day, no-risk, money-back guarantee of 100% customer satisfaction! Call for free literature or order now with complete confidence.

Here's what you get:

1. A professional-quality, full-feature, fully-integrated accounting system.
2. Six-to-fourteen diskettes (depending on your system's disk storage capacity).
3. Four easy-to-follow, self-teaching User's Manuals (over 540 pages!) that are highly rated by satisfied users.
4. An exclusive, new audio cassette tape with step-by-step instructions for quick installation and start-up.
5. "Read Me First!" a unique 40-page system guide and start-up aid.
6. Complete sample data and sample reports for practice and training... a big help to new users.
7. FREE 1-year subscription to Users' Newsletter, "Debts and Credits." It's full of tips, ideas, news, and useful suggestions from us and other users. Recent issues have run over 20 pages long!
8. FREE complete Source Code in popular MBASIC so you can easily customize any program to suit your special needs.
9. Telephone "Hot Line" service for helpful installation support, Start-up support, Technical support, and Training support. The quality of our cheerful customer support has been acclaimed "excellent," "first-rate," and "very courteous and professional" by our users.
10. Access to our growing network of Experienced User Consultants™ in both the U.S. and Canada. These qualified, knowledgeable businesspeople themselves own this fine software and are available to assist you with almost any aspect of installation, training, operation—or even customization, if desired. You'll receive the latest Directory of these helpful Consultants.

Look who's using it:

Here is a sample (taken from our customer files) of the wide variety of businesses successfully using this time-tested, solidly-established, user-proven software:

• Bookkeeping services • CPA/Accounting firms • Construction companies • Wholesale Florists • Retail Florists • Printers • Insurance Agencies • Shopping Centers • Machine Shops • Engineering firms • Software Companies • Computer retailers • Publishers • Financial services companies • Investors • Appliance service firms • Dairies • Boatworks • University Business School • Catholic Diocese • Baptist Ministries • Sail Maker • Convalescent Hospital • Car Wash • Public Library • Cement Plant • Industrial products manufacturing companies • Mortuary • Coal Company • TV/Lin producers and distributors • General Store (in Alaska) • Health services organization • Government Agencies • Record and Tape stores • Trade Association • Graphics firms • Office products companies • Real Estate firms • Oil Products distributor • Instrument Company • Hydraulic Products company • Outdoor Expeditions company • Many types of schools • Chiropractors • Physicians • Landscapers • Law firms • Restaurants • Plumbing Companies • Railroad • Farmers • Banks • Consultants • and many, many more!

A Complete System!

Includes all four standard general accounting programs:

GENERAL LEDGER is completely integrated to automatically post end-of-month transactions from A/R, A/P and Payroll. It prints 13 detailed reports for the entire company, and optional Income Statements for up to 99 departments. It produces up-to-the-minute comparative financial statements with current, year-to-date, budget, and last year (month and YTD), showing both dollar amounts and percentages, and presents everything you, your bookkeeper, and your accountant need to know about the company. • G/L automatically reconciles all accounts, and maintains extensive, detailed audit trails showing the source of each G/L entry for quick, easy, tracing. • Trial Balance includes all transactions. • Flexible Chart of Accounts • True double-entry bookkeeping • Master File capacity: 400 Accounts • Monthly Transactions capacity: 1,000 with 200K diskette; 3,500 with 500K diskette; 7,000 per Megabyte with a Hard Disk.

ACCOUNTS RECEIVABLE provides instant, on-line customer account information (both current and aged), with complete, timely invoicing, including open-item (or balance forward) and statement capabilities. It makes the entire billing process fast, easy, and efficient. It quickly identifies your overdue accounts, helps speed collections, helps control your cash flow, and assists you in making better financial decisions. Both detailed and summary customer activity and aging reports are instantly available. • Preprinted forms available for Invoices and statements. • Detailed audit trail. • Maintains comprehensive customer data files. • Produces 8 reports and documents. • Includes automatic periodic customer/client billing option which is ideal for service businesses. • Itemized monthly transactions. • Master File capacity: 400 Customers. • Monthly Transactions capacity: 800 with 200K diskette; 3,500 with 500K diskette; 7,000 per Megabyte with a Hard Disk.

ACCOUNTS PAYABLE maintains complete vendor/voucher history and includes check-writing capabilities. Current and aged payable reports are available upon command. It prepares an extremely useful cash flow/cash requirements report that greatly improves management control of your most valuable resource—cash! It prints checks (on commercially available forms on which your company name, address and logo can be imprinted) with comprehensive check stubs that your vendors will appreciate. • Produces 11 reports and documents. • Automatic pay selection program allows payment by due date or by discount date. • Manual and automatic checkwriting. • Check register. • Detailed audit trail. • Itemized monthly transactions. • Master File capacity: 400 Vendors. • Monthly Transactions capacity: 800 with 200K diskette; 3,500 with 500K diskette; 7,000 per Megabyte with a Hard Disk.

PAYROLL is a complete, easy-to-use professional-quality payroll system. Be the office hero each week when the checks come out on time! This program calculates payroll for every type of employee (hourly, salaried, and commissioned) and prints payroll checks (with popular, comprehensive check stubs) with an absolute minimum of input. Your company name and logo can appear on these, too. • Stores and reports comprehensive employee and payroll information. • Maintains monthly, quarterly, and yearly totals for reporting purposes in multiple states! • Offers user-maintainable Federal, State, and local tax tables! • W-2 printing • 941 Reporting • Produces 10 reports and documents. • Master File capacity: 400 employees. An outstanding Payroll package!

Produces 42 Reports & Documents:

General Ledger 1. Chart of Accounts 2. Chart of Accounts with summary dollar amounts 3. Chart of Accounts with prior year comparisons 4. Daily Transactions Report 5. Itemized Monthly Transactions 6. Balance Sheet 7. Balance Sheet with prior year comparison 8. Income Statement 9. Income Statement with prior year comparison 10. Departmental Income Statement(s) 11. Departmental Income Statement(s) with prior year comparison 12. Detail report for individual accounts 13. Trial Balance Statement

Accounts Receivable 1. Daily Transactions Report 2. Invoices (with or without preprinted forms) 3. Statements (with or without preprinted forms) 4. Summary Aging Report 5. Detailed Aging Report 6. Itemized Monthly Transactions 7. Detailed Customer Activity Report 8. Summary Customer Account Report

Accounts Payable 1. Daily Voucher Report 2. Daily Credit Report 3. Checks with Detailed stubs 4. Check Register 5. General Ledger Transfer Report 6. Cash Requirements Report 7. Transaction Register 8. Open Voucher Report 9. Aged Payables Report 10. Detailed Vendor Activity Report 11. Summary Vendor Account Report

Payroll 1. Federal Tax Tables 2. State Tax Tables 3. Payroll checks with stubs 4. Payroll Check Register 5. Monthly Payroll Summary 6. Quarterly Payroll Summary 7. General Ledger Transfer Report 8. Detailed Employee File Listing 9. Produces 941 Worksheet 10. Prints annual W-2 Forms

System Requirements: Either CP/M® or MS-DOS (PC-DOS) • Microsoft BASIC • 64K RAM • Two disk drives or hard disk • 132 column wide carriage printer, or an 8 1/2" x 11" printer with compressed print mode (an Epson MX-80 or similar printer).

100% SATISFACTION GUARANTEE

No-Risk, 30-day Money-Back Guarantee

Order Desktop Accountant and evaluate it yourself for 30 days. Test the performance of each program using our comprehensive Sample Data Files to enter and process data, query accounts, print checks and reports, and more. Review the five User's Manuals, hear the Training Tape, read the Users' Newsletter, even call our Technical Support Group with your questions. You must be completely satisfied with Desktop Accountant or you may return it in good condition with the Sealed Master Disk UNOPENED (it installs your live data) for a prompt, courteous, complete refund!

Figure 1. Draft quality ASCII character set.

Photo 3. The Microprism's rear panel.

versatile tool for written documents. I wouldn't use the Microprism for important professional correspondence, resumes, or publication purposes.

But it seems perfectly suited for personal correspondence, interoffice memoranda, manuscripts, reports (with or without graphics), and other written material where letter-quality printing is not a necessity.

The Microprism printer can be completely software controlled; this is far and away its most significant selling feature. Software control is accomplished with special ASCII control characters.

Program-embedded functions might include character density changes, fixed proportional spacing, automatic text justification, line spacing, page length, margin positions, graphics data, double-width characters, and horizontal and vertical tabs.

The Owner's Manual

Care and feeding of the IDS 480 is a relatively simple matter. All normal maintenance is described in the owner's manual. It contains suggestions such as semiannual cleaning with a lint-free cloth or soft brush and lubrication with a high grade machine oil to keep the

to 110 characters per second (cps) in the near-letter-quality font.

Using the printer's DIP switches, you can select character densities of 10, 12, and 16.8 characters per inch (cpi). See Figs. 1 and 2 for examples of print types.

Maximum line length varies from 80 to 134 characters per 8-inch line, depending on the pitch setting. You can fit more characters on a line by opting for pro-

portional spacing. The printer optionally inserts line spaces as small as 1/48 inch; normal line spacing is 1/12 inch.

Page formatting is software and DIP-switch selectable. Under software control, you can set top and bottom margins in 1/48-inch increments and left and right margins in 1/120-inch increments.

The wide variety of page formats and the quality of print make the IDS 480 a

unit like new.

Replacing worn ribbon cartridges is a snap because the dust cover comes off for easy access. However, since ribbon life for the Microprism is estimated at more than 1½ million characters, you won't have to do this often.

The manual is a well-written explanation of how to take full advantage of the printer's features. You should carefully study the manual to become cognizant of the valuable features you can call through software control.

The manual is divided into five sections, and provides specific information on running the printer. In addition, it has a handy quick-reference index and a glossary.

Conclusions

With a price tag of only \$649, the IDS Model 480 is a printer well worth the investment. Near-letter-quality characters provide acceptable correspondence text, while the graphics are comparable to or better than other dot-matrix printers in the same price range.

The manual is clear. Service and repair procedures at the Integral Data Systems Inc.'s home office have the customer in mind.

The only problem I encountered during testing was with the printer cable. IDS doesn't have a finished parallel printer cable that connects the printer to a TRS-80 Model I or III.

The cable provided for this review had an adapter card attached that was supposed to fit into the slot where the 25-pin male connector is located. It didn't fit.

At this time, the only way to use the Microprism on a Model I or III is to file

down the card edges to make a tight connection.

The people at IDS are aware of this cable problem and have assured me that it should be remedied before you read this review. You must order the proper

cable for your computer separately.

Aside from the problems I encountered in trying to interface the printer, the Microprism performed well. It is a valuable acquisition if you need a small, reasonably priced, tabletop printer. ■

SOMEWHERE, OUT THERE, A BEST-SELLING PROGRAM

WHERE IS IT?

Wherever it is, we want it. Maybe, just maybe, we're searching for your program, but we'll never find it unless you call us.

It has to be good, though. Because we're the Software Guild™, an organization devoted to finding the very best microcomputer programs for packaging and distribution under the Softsmith™ label. Hundreds of titles have already been licensed to the Softsmith library. But they're only the beginning. Our goal is to have the best program in major categories on every

popular machine. Of course, we can't do it without you.

If you're a program author or publisher, The Software Guild offers some distinct professional and monetary advantages.

First, you devote your time to what you do best: programming. You can leave the manufacturing, packaging, documentation, distribution and customer service to us.

Second, our revolutionary retail merchandising system will put your program before the public through the normal computer and software stores, plus record outlets, department stores, book shops, and more places where software has never before been available.

IS BEING WRITTEN.

Third, is royalties. Wider distribution means more substantial royalties. And, your Software Guild royalties start to accrue when the dealer makes his purchase in quantity, so you aren't left waiting while money trickles in.

Fourth is flexibility. We do not insist on the exclusive rights to your program. You can deal with other publishers and distributors, or market your program yourself, while it is in Softsmith distribution.

We know you're out there, working and dreaming, and we want to help make your dream come true. Our full staff of professional evaluators are waiting to review your best-seller.

**So call us, wherever you are.
Contact Regina Roberts at (415) 487-5200.**

Project Assessment Technique (PAT) is a Level II Basic program for the TRS-80 Model I/III computer equipped with 16K of memory. It calculates the rate of return on an investment and lets you play "what if" games that help you choose between several business alternatives.

PAT displays a worksheet of 14 lines. You enter data about your project into the first 13 lines. PAT then computes the internal rate of return (IRR) based on your information and puts the answer in line 14. This number is a summary of the facts of your proposal, which you can compare with the IRRs of other projects. The larger the percent, the more desirable your venture.

PAT makes these assumptions:

- The project must prove itself within five years.
- All start-up expenditures occur at the same time.
- Capital is recovered at the rate of 20 percent per year.
- Product inventory is recovered fully in year five.

The Worksheet

PAT displays the worksheet shown in Fig. 1.

The mode indicator is < >. In addition to AUTO, there is MANL for

The Key Box

Model I or III
16K RAM
Cassette or Disk Basic

manual mode, PRNT for printing, and CALC for calculating the IRR percent. See the commands section for an explanation of these indicators.

The asterisk is the marker. It tells you where next to enter data. In the Auto mode the marker automatically advances to the next line when you press the enter key. You may move it up and down with the appropriate arrows (see Commands).

You can enter a title of up to 35 characters long. The title is automatically centered when you hit the enter key.

Line 1, Non-depreciable Capital, is the sum of all non-depreciable capital associated with a project. Examples include buildings and land improvements (items that do not wear out).

Line 2, Depreciable Capital, is the sum of all depreciable capital needed to start a project. This includes tools, furniture or machinery (items that wear out). The total is fully recovered in a straight-line fashion over five years.

Line 3, Expense (A), is the sum of all development costs, supplies, and so on necessary to initiate a project. Line 4, Expense (B), is the same as line 3. PAT adds Expenses A and B and treats them as one. They are shown as separate items for your convenience.

Line 5, Product Inventory, is the sales value of items produced but not yet sold. This is an annual average assumed to remain fixed during the five-year life of the project. It is non-depreciable and is fully recovered in year five.

Line 6, Net Salvage, is the difference between the value received for facilities made obsolete by the new project and the cost to remove them. If cost exceeds value received then enter a negative number.

Lines 7-11, Net Income, are the forecast of the income this project will generate. The amount entered in each line is the difference between income and expenses for wages, taxes, and so on in the corresponding year.

Line 12, Income Tax Rate (percent), is the corporate tax rate on income. Unless you enter another value, PAT uses 43 percent. Consult the IRS for the latest information.

Line 13, Investment Credit (percent), is a one-time tax deduction based upon the amount of depreciable capital invested in line 2. PAT assumes a tax credit of 10 percent. Consult the IRS for the current tax credit on capital having a five-year life.

Line 14, IRR (percent), is your barometer for the project. It summarizes the first 13 lines of the worksheet. The

The following are multi-key commands. Key in amount then press

enter	to save amount keyed in
clear	to erase amount keyed in
+ - */	to modify a value by amount keyed in
I	to inflate income from * to year five by amount keyed in

The following are single key commands. Just press

A	to disable or enable automatic mode
C	to compute IRR (%)
D	to duplicate income from * to year five
E	to end program and clear screen
H	to recall instructions—press space bar to continue
P	to print contents of screen
R	to reset all values to 0 or default amounts
T	to revise title
Up/Down arrow	to move * up and down

Table 1. PAT commands.

larger the value, the more attractive the proposal is. If you were to take each year's income, adjust it for taxes and tax credits (lines 12 and 13), discount it by the IRR (percent), and add them together, their sum would equal your total investment in lines 1-6.

Entering Data

PAT operates in the Auto mode unless you tell it otherwise (see Commands). In this mode all entries are made by keying in a number and then hitting enter. The value is automatically right-justified and the marker (*) moved to the next line. To skip a line just hit enter. Continue entering data until you reach line 13. Now when you hit enter, PAT computes the IRR,

“Unlike the multi-key commands... single-key commands are immediate.”

displays the answer in line 14, and returns the marker to line 1. This is the simplest way to use PAT. Refer to the next section, Commands, for a more versatile approach.

Commands

PAT recognizes 17 commands. They are summarized in Table 1 and can be recalled at any time by typing H for help.

Use multi-key commands when entering data. They are multi-key because you first type DATA, then press the enter key to accept the value keyed in. This also advances the marker in the Auto mode.

Press clear to erase the value keyed in and reinstate the current amount.

Press + - */ to modify a value by an amount just keyed in. For example, if line 9 is currently 2,500 and you wish to reduce it by 25 percent just type .75*. PAT automatically multiplies 2,500 by .75 and displays 1,875. Addition, subtraction, and division work the same way: Key in the operator, then the modifier. You don't have to use the shift key for multiplication or addition.

Press I to inflate income forecasts (lines 7-11) from the marker to the fifth year (line 11). For example, if the forecast in lines 7-11 is to be inflated by 2 percent annually, first put the

Every Z80 assembly-language programmer needs this book.

Programming in assembly language requires good tools. *TRS-80/Z80 Assembly Language Library*, a complete reference book on TRS-80 Model I assembly language, is the best tool you can find. In over 300 pages, 45 figures, and 75 program listings, author Craig A. Lindley explains the details of Model I hardware and software and shows you how to write programs that squeeze every bit of performance out of your computer. This book will teach you:

- how to use ROM and DOS routines in your own programs
- how to perform disk input/output
- how to access the video display and keyboard
- how to write easy-to-use programs
- how to perform arithmetic operations
- how to use the undocumented Z80 instructions

You'll also learn about disk operating systems, device handling, base conversion, parameter passing, and more.

TRS-80/Z80 Assembly Language Library contains a library of ready-to-run utility programs that are worth many times the book's cost. Included with the book are two Model I TRSDOS-compatible disks* containing utilities for printer formatting and spooling, single-key entry of strings, disk editing, base conversion, password encoding and decoding, and more. You get more than 15 valuable utilities, and the source code files are included, so you can examine, modify, and learn from every program.

Many of the programs also run on the Model III,

TRS-80/Z80 Assembly Language Library is a Wayne Green publication. TRS-80, TRSDOS, Model I, Model III are registered trademarks of the Radio Shack Division of Tandy Corporation. Z80 is a registered trademark of Zilog.

and those that do not require only minor modification. One of the book's four sections is dedicated to routines and programs that run on any Z80-based system. No matter what Z80 computer you program, this book has something for you.

It's a book that's designed to be used. The text is set in large type, and the book is bound in an 8½- x 11-inch easel-backed binder that stands up next to your computer. So there's no squinting at tiny type and fighting to keep the book open.

The whole package—book, disks, and binder—is yours by mail for the introductory price of only \$29.97. And if you charge it, you can even call toll-free to order. Reserve your copy now, because after October 31, the price will be \$34.97.

TRS-80/Z80 Assembly Language Library. It's the assembly-language book for the '80s.

*Disks do not contain a disk operating system; two disk drives or a disk copy utility are required to transfer the files.

Call **Toll-Free 1-800-258-5473** for credit card orders or send \$29.97 plus \$4.50 shipping and handling to Wayne Green Books, Retail Sales, Peterborough NH 03458. Dealer inquiries invited.

I need TRS-80/Z80 Assembly Language Library.

Send me _____ copies of *TRS-80/Z80 Assembly Language Library* (BK7395-01) @ \$29.97 each. I have enclosed \$4.50 per system for shipping and handling.

339B8L

marker on line 7. Then type 2 and press I. PAT automatically calculates the inflated amount (compounds annually) and displays the new values in lines 8-11. The line addressed by the marker is assumed to be year zero in the compound interest formula and does not change.

Unlike the multi-key commands that require a two-step operation, the single-key commands are immediate. Just press one of these keys (do not press enter).

Press A to change from the automatic mode to the manual mode and back. Each time you press A the message in the upper right corner of the screen confirms the new mode. For example, AUTO tells you that you are in the automatic mode. Pressing the A key puts PAT into the manual mode and MANL appears in the upper right corner of the display. In the manual mode the only way to move the marker is with the up and down arrows. The manual mode allows you to move the marker to line 14. This lets you enter a desired IRR percent while PAT computes and displays the net incomes necessary to achieve it in lines 7-11. Pressing A again returns you to AUTO.

Sophisticated Moving Averages System

S M A S

Stock Market Adviser System

SMAS is a stock market program with a difference. SMAS uses both fundamental principles and technical analysis. Its refined algorithms using three moving averages are validated by applications both to individual stocks and to portfolios.

- Sophisticated algorithms yield weekly appraisals of market trend and recommendations to buy, sell, and hold individual stocks
- Data base consists of 196 stocks and 4 indexes
- Data base stocks selected for growth history and potential; volatility; and trading activity
- Data bases are current; you get meaningful results the very first week you use SMAS
- Data required by SMAS are readily available
- Program is menu driven, user friendly, with needed utilities and built-in checks for accuracy
- SMAS is especially suited for those seeking long term capital gains
- SMAS reduces emotional involvement in the market
- SMAS works with TRS80S, NEWDOS.80, LDOS & DOSPLUS with TRS-80 (TM Tandy Corp.) Models I and III. State Model and number of tracks in disk drives.

SMAS \$169.95 — Include \$3.00 for packing and shipping or \$6.50 for Priority Mail. Texans add 5% sales tax. Cashier's check or money order brings prompt shipment, personal check requires three weeks to clear

Or send SASE for further information

Press C to compute the IRR percent at any time and from any line. When you press C the marker disappears, CALC replaces the mode in the upper right corner of the screen, and a series of numbers flashes in line 14. When the correct IRR percent is found the display remains fixed, the upper right corner again displays the mode, and the marker reappears. This takes about 10 seconds.

Press D to duplicate, through year five (line 11), an income addressed by the marker. For an example, the income level in year two will remain constant through year five. Rather than entering that value over and over, just move the marker to year two (line 8) and press D. PAT automatically places that amount in years 3-5.

Press E to end the session and clear the screen. When you press E the screen clears and Ready appears. You can now enter other programs or run PAT. Pressing the break key has the same effect but does not clear the screen.

Press H to recall the command list. You may press H at any time. Doing so clears the screen and replaces the worksheet with a list and brief descrip-

UO-LISP

MODEL IV DISK UPGRADE ONLY FROM MICRO MAINFRAME SHIPPING FROM STOCK

- Our FDC-3B Standard Grade controller is for single sided disk operation only and does not provide for 8" disk operation.
- Our FDC-3C Premium Grade controller is for double sided and/or 8" disk drives.

BOTH COMPLETE DISK UPGRADE KITS INCLUDE THE TEC 5" SINGLE SIDED, DOUBLE DENSITY TEC DISK DRIVE. Double sided drives will be available at extra cost. 8" drives are available from a number of vendors. Please order according to the stock numbers listed below.

DRIVE UPGRADE KIT INCLUDES CONTROLLER, SWITCHING POWER SUPPLY, INSTALLATION KIT, TEC DISK DRIVE AND COMPLETE INSTRUCTIONS.

FDC-3BK (Standard Grade Controller)	\$ 349.95
FDC-3CK (Premium Grade Controller)	\$ 369.95

DISK CONTROLLER PC BOARDS ARE AVAILABLE AS FOLLOWS.

FDC-3B (Standard Grade Controller)	\$ 79.95
FDC-3C (Premium Grade Controller)	\$ 99.95

CONTROLLER UPGRADE KIT (less drive) INCLUDES CONTROLLER, SWITCHING POWER SUPPLY, INSTALLATION KIT, AND COMPLETE INSTRUCTIONS.

FDC-3BK (Standard Grade Controller)	\$ 179.95
FDC-3CK (Premium Grade Controller)	\$ 199.95

MODEL-III ** COMPUTER COMPLETE WITH DUAL TEC DISK DRIVES, 48K RAM, AND A MICRO MAINFRAME FACTORY INSTALLED DISK UPGRADE KIT.

M32-1 Model-III ** with FDC-3BK	\$1495.00
M32-2 Model-III ** with FDC-3CK	\$1595.00

THE NEW DS-1A DATA SEPARATOR IS NOW AVAILABLE AND GIVES SUPERIOR DATA SEPARATION AND EXTENDS DISK OPERATION TO ALMOST ANYONE'S DISK CONTROLLER!

If you are having difficulty with your disk controller, the problem may be the data separator. Micro Mainframe can provide data separator in your unit, and on selected printers, we can give you 8" disk capability for FREE!

DS-1A Data Separator

\$ 39.95

WHAT IS DIFFERENT ABOUT THE MICRO MAINFRAME CONTROLLER?

- **MICRO MAINFRAME** controllers have features other manufacturers haven't yet thought of.
- **MICRO MAINFRAME** products have been proven over the longest period of time, if any in the industry and are state of the art. Thanks to our high volume production, we can offer the highest quality products at the most competitive price in the industry.
- **EVERY MICRO MAINFRAME CONTROLLER PRODUCED HAS INCLUDED GOLD PLATED CAR EDGE CONNECTORS FOR INCREASED RELIABILITY AT NO EXTRA COST.**
- **MICRO MAINFRAME IS FIRST TO USE THE STATE OF THE ART DS-1A DATA SEPARATOR (FDC-3C ONLY).** We have proven this data separator for a full year and have used it beginning with the very first FDC-3C disk controller. Unlike other controllers, **NO ADJUSTMENTS ARE EVER REQUIRED TO OUR DATA SEPARATOR.**
- **MICRO MAINFRAME IS FIRST TO PROVIDE FOR 8" DISK OPERATION ON BOTH OUR FDC-3B AND FDC-3C MODELS.**
- **MMF GIVES YOU A SYSTEM THAT CAN GROW WITH YOUR NEEDS,** from floppy disk systems to state of the art hard disk systems, with full ECC and the industry's only SASI Multiplexer with our SASI-NET **.
- **MMF'S NEW 24 PAGE INSTALLATION MANUAL IS SECOND TO NONE.** Installing a disk upgrade kit from MICRO MAINFRAME is no easier than over tea.

WHO IS MICRO MAINFRAME?

MICRO MAINFRAME is the highest and most respected alternative manufacturer of floppy disk controllers for the Model-III **.

MICRO MAINFRAME has more experience in floppy and hard disks than any other manufacturer. In twenty years, including our new 5.25" FDC-3 series of disk controllers for the third year.

MICRO MAINFRAME has sold thousands of controllers to many OEMs who have marketed MMF controllers as their own.

HOW DO I ORDER?

In order to prevent truck waste or shipping problems to the end user, **MICRO MAINFRAME** has not accepted orders for a year, either pre-paying your shipment, or we will ship C.O.D. with orders over \$99.95, and a free 30 day return placement. All non-certified funds will be held a minimum of 3 weeks to allow them to clear. Shipping and handling charges are extra and this is included in the price above. **MODEL-III ** COMPUTERS** are shipped by truck only. Please phone MMF about shipping and handling fees for your location.

ACCEPT NOTHING LESS THAN THE BEST. INSIST UPON GENUINE MICRO MAINFRAME QUALITY PRODUCTS. Micro Mainframe has a policy, like most of products for the IBM-PC ** computer system. Get it right for our descriptive flyer.

DEALER INQUIRIES SOLICITED ON YOUR PRINTED LETTERHEAD ONLY.

Phone orders are accepted only between 9:00 AM and 5:00 PM Pacific Time.

Listing continued

line. You may then key in any string of alphanumeric characters of up to 35 characters. Use the left arrow to backspace. When the string is complete press enter. PAT automatically centers the title and returns the marker to the line it addressed when you pushed T. When you are changing the title PAT recognizes only enter and clear.

Press the up or down arrows to move the marker up and down the worksheet. Pressing the up arrow when the marker is at line 1 moves the marker to line 14 in the manual mode and line 13 in the automatic mode. Similarly, pressing the down arrow when the marker is at line 13 repositions it at line 1 in the automatic mode and from line 14 to line 1 in the manual mode.

Error Messages

There are only two error conditions. Both involve the number of digits in a value and neither is serious. TOO BIG! appears when you attempt to key in more than the limit of six significant digits. The next keystroke clears the message.

The percent sign indicates that the result of a calculation exceeds the six significant-digit limit. The answer is correct but it will be preceded by % and the decimal points will not line up. In this case you may wish to divide all values by 10 or 100. As long as all amounts have the same relative magnitude the IRR percent does not change.

Sample Problems

We plan to buy office furniture for \$1,125, incur miscellaneous expenses of \$75, add soundproofing to the ceiling of our office at a cost of \$750, and install a personal computer valued at \$2,300 and a printer priced at \$1,500. We also plan to develop software for this machine that will speed order processing. The cost of this development effort is \$3,500. We expect to generate \$7,500 in additional net income the first year, \$8,000 the next, and \$9,500 in years 3-5. How does this proposal compare with another having an IRR percent of 27.8?

First, be sure that PAT is in the automatic mode; Auto should appear in the upper right corner of the screen. If MANL is there press A to change to Auto and use the up or down arrows to position the marker at line 1.

Next, identify all non-depreciable expenses. There is only one, the new ceiling. Key in 750 and press enter. Since the office furniture, computer and printer are depreciable capital, PAT

treats them the same. So we add them and enter 4925. Alternatively you could put PAT into manual, use the plus (+) command, then return to automatic.

The third and fourth items on the worksheet are expenses. We have development and miscellaneous costs. PAT treats them the same so we could enter their sum. However, they are so obviously different that we will keep them separate. Therefore, we enter 3,500 and then 75. The marker is now on line 5, but we have nothing to type here or on line 6 so we skip them by pressing enter once to advance from line 5 to line 6 and again to move to line 7. Now we enter the net incomes as 7500, 8000, 9500, 9500, and 9500. There is no change in line 12, so again press enter. This brings us to line 13. Once more there is nothing to alter so hit enter.

When you press enter at line 13, the marker disappears, <CALC> replaces the mode in the upper right corner of the screen, and numbers flash in line 14. After about 10 seconds 58.1 remains in line 14, the marker returns to line 1, and Auto reappears. The completed worksheet appears in Fig. 2. This project's IRR is much larger than the other project's 27.8, so we'll take this one.

What if development costs go up 15 percent or sales drop by half? Is this project still sound? Try these alternatives and see. You don't have to enter all new information. Simply change the lines that apply. The manual mode may be helpful here and you might want to title each successive "what if."

Contact David Plyer at 733 Crescent Parkway, Westfield, NJ 07090.

Aerocomp's Proven Best-By Test! The "DDC"

SPRING SPECIAL

Double Density Controller

★ Technical Superiority

At last! A double density controller for Model I with HIGHER PROBABILITY OF DATA RECOVERY THAN WITH ANY OTHER DOUBLE DENSITY CONTROLLER ON THE MARKET TODAY! The "DDC" from Aerocomp. No need to worry about the problems that keep cropping up on existing products. AEROCOMP'S new analog design phase lock loop data separator has a wider capture window than the digital types currently on the market. This allows high resolution data centering. The finest resolution available with digital circuitry is 125 ns (nano seconds). The "DDC" analog circuit allows infinitely variable tuning. Attack and settling times are optimum for 5-1/4 inch diskettes. The units presently on the market use a write precompensation circuit that is very "sloppy". Board to board tolerance is extremely wide - in the order of ± 100 ns. The "DDC" is accurate to within ± 20 ns. The bottomline is state of the art reliability!

★ Test Proven

Tests were conducted on AERDCOMP'S "DDC", Percom's "Doubler A" and "Doubler II" and LNW's "LNDoubler" using a Radio Shack TRS80 Model I, Level 2, 48 K with TRS80 Expansion Interface and a Percom TFD100 disk drive (Siemens Model 82). Diskette was Memorex 3401. The test diskette chosen was a well used piece of media to determine performance under adverse conditions. The various double density adapters were installed sequentially in the expansion interface.

The test consisted of formatting 40 tracks on the diskette and writing a 6DB6 data pattern on all tracks. The 6DB6 pattern was chosen because it is recommended as a "worst case" test by manufacturers of drives and diskettes. An attempt was then made to read each sector on the disk once - no retrys. Operating system was Newdos/80, Version 1.0, with Double Zap, Version 2.0. Unreadable sectors were totalled and recorded. The test was run ten times with each double density controller and the data averaged. Test results are shown in the table.

★ Features

TRS80 Model I owners who are ready for reliable double density operation will get (1) 80% more storage per diskette, (2) single and double density data separation with far fewer disk I/O errors, (3) single density compatibility and (4) simple plug-in installation. Compatible with all existing double density software.

★ Value \$119.95

for the Best DD Controller on the market.

★ TEST RESULTS ★

MFR & PRODUCT	SECTORS LOCKED OUT (AVG)

Data Separators

The advances that make the "DDC" great are incorporated in the new AERDCOMP Single Density Data Separator ("SDS") and Double Density Data Separator ("DDS").

★ Has your original manufacturer left you holding the bag?

If you already own a Percom "Doubler A", "Doubler II" or LNW "LNDoubler" or Superbrain, the AEROCOMP "DDS" will make it right. Look at the test results:

MFR. & PRODUCT	SECTORS LOCKED OUT	
	WITHOUT "DDS"	WITH "DDS"
PERCOM "DOUBLER II"	18	1
PERCOM "DOUBLER A"	250	0
LNW "LNDOUBLER"	202	0

Note: Same test procedures as "DDC".

* Trademark of Percom Data Co.

** Trademark of LNW

*** Trademark of Tandy Corporation

**Plugs directly into your existing
Double Density Controller.**

★ "DDS" \$49.95
(Use 1791 chip from your DD Controller)

★ "DDS" with disk controller
chip included \$79.95

★ Disk controller
chip \$34.95

(Shipping \$2.00 Cont. US - see opposite
page for details)

Do you need a Single Density Data Separator?

The internal data separator in the WD1771 chip (R/S Expansion Interface) is NOT recommended by WD for reliable data transfer. Do you have any of these problems: Lost data, tracks locked out, CRC errors, disk retry? YOU NEED ONE!

★ "SDS" \$29.95
(For Mod. I; shipping \$2.00)

FREE TRIAL OFFER

Use your AEROCOMP drive for up to 14 days. If you are not satisfied for ANY REASON (except misuse or improper handling), return in the original shipping container for a full purchase price refund. Applies to hardware only. Sorry, we cannot refund on software. We have confidence in our products and we know you will be satisfied.

WARRANTY

We offer a six months warranty on parts and labor against defects in materials and workmanship. In the event service becomes necessary for any reason, our service department is fast, friendly and cooperative. Our goal is 48 hour turnaround on all warranty or repair drives!

100% TESTED

AEROCOMP disk drives are 100% subjected to burn-in and bench test. We even enclose a copy of the test check list, signed by the test technician, with each drive. AEROCOMP means reliability!

ORDER NOW!

Order by mail or call TOLL FREE TO THE NUMBERS BELOW. Please note toll free lines will accept orders only. We accept VISA or MASTERCARD. Be sure to include card number and expiration date. We will not charge your card until the day we ship. Order by mail with credit card or send check or money order. Please allow 2 weeks for personal checks to clear our bank. Order COD. No deposit required but all COD's will arrive cash, certified check or money order only. We'll send a card showing the exact COD amount before your shipment arrives. Shipping is **not** included in the prices shown. Texas residents add 5% sales tax. **NEXT DAY SHIPMENT** on all in stock items.

Listing continued

Your finances probably involve more than a simple checking account. You may have a small business with revenue in checks and cash, you may receive payment for professional services, or you may want to track office or other miscellaneous expenses. A detailed record of these transactions, broken down into your own predefined categories, would be a bookkeeping boon, especially at tax time.

FTR (Financial Transactions Recorder) is an automated transaction system for the Model II/16 TRSDOS 2.0 operating system that lets you post financial transactions to one of 99 different user-defined categories. You can obtain a tally sheet for any single category or a contiguous range of categories. In addition, you can opt to see all transactions posted, or only a limited range of transactions (such as only those made since your last tally sheet was printed). In both cases, the tally sheet provides you with a report total (a total of all the transactions in the report) and a grand total (a total of all the transactions on file for each category).

How FTR Works

In the following example of FTR, assume you are a self-employed professional with a secretary, a small office, and the standard expenses (office supplies, insurance, and professional fees, for example). You might also have additional outside expenses and in-

come, such as those from lecturing or freelance writing.

You can keep track of your financial status and document income tax returns using FTR's tally sheet printouts.

You might divide your transactions into these categories:

- | | |
|------------------------|----------------------------------|
| 1. Professional income | 3. Office expenses |
| 2. Employee wages | 4. Insurance |
| | 5. Related professional expenses |
| | 11. Lecture fees |
| | 12. Lecture expenses |
| | 16. Author fees |
| | 17. Author expenses |

The three major areas of income listed above form three contiguous groups.

Note that the numbers 1, 11, and 16 start each related financial category. Should your activities increase, you can add categories later on.

Program Overview

FTR is menu-driven. The first screen (main menu) asks whether you want to add or modify data, print a tally sheet, define your categories, print category

ARE YOU TIRED OF HEADACHES AND WATERY EYES FROM STARING AT YOUR TRS-80'S HARSH WHITE VIDEO DISPLAY?

Well, a **FATIGUE FIGHTER** optical filter changes that display to a nice, easy on the eyes, green. It is made of hard 1/8 inch thick acrylic for durability, attaches in seconds without tools, and matches TRS-80 styling. So, invest in some relief, get a **FATIGUE FIGHTER** for your Model I, II, or III. It will probably be one of the most used accessories you will ever buy.

P.S. Available direct from us or at computer stores.

TRS 80 IS A TANDY CORP. TRADEMARK

TO ORDER:

Send Name & Address Typed or Clearly Printed with Check or Money Order (U.S. FUNDS) for \$14.95 Each, Including Shipping. Canadian Orders Add \$1.00 Each. All Other Foreign Orders Add \$3.00 Each for Shipping. NO CREDIT CARD ORDERS. COD's (U.S. ORDERS ONLY) are \$3.00 Additional per Order & are Accepted by Mail or by Calling 904 378 2494 or 9-5 M.F. Florida Residents Add 5% Sales Tax.

MBIP STAND-ALONE PARALLEL PRINTER BUFFER

32K Parallel.....	\$299.95
64K Parallel.....	\$349.95
64K Upgrades.....	\$179.95

How It Works

The MBIP in-line parallel buffer works with almost any computer/printer combination utilizing a Centronics type parallel interface. Available with up to 256K of RAM for data buffering, the MBIP can accept very large files for buffering as fast as your computer can send it.

Saves Time

Most computers are able to send data to the printer at very high speeds, usually much faster than the printer can print it. The MBIP, placed between the computer and the printer, accepts this data as fast as the computer can send it, stores it in its own memory and then sends it on to the printer at the printer's own speed. Under normal circumstances without a MBIP the computer could be tied up for hours on a large file being dumped into the printer costing you valuable time and money.

Improves Efficiency

Using the MBIP's touch sensitive front panel controls, multiple copies of your document can be made without tying up the computer any further. Printing may be halted at any point and continued where it left off later. You can even turn your computer off and the MBIP will continue until the print job is complete.

The MBIP requires no user modifications of software and installs in seconds with virtually any computer (including TRS-80, ATARI, IBM-PC, APPLE, OSBORNE, NEC etc.) and any printer (including EPSON, CENTRONICS, NEC, C.I.TOH, IDS, ANADEx, OKIDATA, IBM PERSONAL etc.), dimensions are 5 $\frac{1}{8}$ "W x 7 $\frac{3}{4}$ "D x 1 $\frac{1}{8}$ "H.

INTERNAL PARALLEL BUFFER FOR EPSON

MBP 16K	MBP 32K	MBP 64K
\$159.95	\$199.95	\$249.95

Operation

The MBP is an intelligent Centronic-Compatible parallel interface for the Epson MX-80, MX-80 F/T, and MX-100 printers, with 16K, 32K, 64K bytes of on-board RAM for data buffering. FX80 and FX100 compatible.

Eliminates Printer Bottleneck

The buffering capability of the MBP increases your data processing efficiency by eliminating the wait normally experienced while printing. An Epson printer prints at 80 characters per second; at this speed it takes about five minutes to print a 16,000 character document. During most of this time the computer is waiting for Epson to finish one line so it can send the next. By using the MBP it takes the computer only *four seconds* to send a 16,000 character document. The Practical Peripherals MBP interface typically accepts data as fast as the computer can send it, until full, returning use of the computer to you while it handles the printing. You can continue with other processing while simultaneously printing data from a previous job, gaining all the time you normally would have spent waiting for the printer to finish. Any program that involves printed output will be speeded up using the MBP.

The MBP supports all standard Epson Commands, is compatible with GRAFTRAX-80, and is plug compatible with the standard Epson cable. THE MBP does not require any user software for control.

Installs in Minutes

The MBP is easy to install — it simply plugs into the existing auxiliary interface connector inside the Epson without modification of the printer.

definitions, or end the program (see Fig. 1).

When you select a task, a new screen replaces the menu and identifies the task you selected at the top of the screen (see Fig. 2). A prompt to continue (C) or return to the main menu (R) appears along the bottom of the screen. Pressing C brings up a third screen, the screen on which you perform the task you selected.

I will go through each of the tasks and describe the screens associated with them.

Defining Categories

The first thing to do in developing the data base is define your transaction categories. When you choose this option from the menu (option 4), the task identification screen appears (see Fig. 2). If you press C, the third (working) screen appears with space for 20 categories and a prompt (see Fig. 3). You define your categories on this screen.

When you select a category number, a fourth screen appears (see Fig. 4). If you selected a number where a category was previously defined, the old category appears along with a prompt asking you if you want to retain the old category or

THE LOGICAL TOOL

For Hardware and Software Development

MODEL LA-1680 LOGIC ANALYZER

For TRS-80 Model I or III Computers (48K RAM)

FEATURING ...

- Collection Of 1000 Data Samples On Each Of 16 Channels
- Optionally Expandable To 64 Channels
- User-Selectable Sampling Rates As Fast As 20 MHz
- Easy To Specify Triggering & Collection Conditions

Timing Displays For Hardware Include:

Standard 16 channel timing diagram
Edge mode for transition identification

State Displays For Software Include:

Dump in hex, binary, octal, decimal
Instruction disassembly of microprocessors
Map showing frequency of data samples

Plus ...

Histogram showing software performance
Signature analysis of 14 points at once
Correlate sample to reference memory
Pattern search to aid data location

Incredibly friendly 'help' displays

The LA-1680 Logic Analyzer allows you to hook up to a high-speed digital circuit; define and collect the data you wish to examine; and then, produce a visual representation of the actual digital signals for closer inspection and analysis. This facilitates the design and service of computers, peripherals, and any equipment which contains digital logic circuitry.

The LA-1680 Logic Analyzer contains the high-speed circuitry necessary to perform the time-critical functions of data recognition and collection. The TRS-80 microcomputer provides for convenient keyboard entry of user commands, detailed display of data on screen or printer, and storage of test set-ups or displays on disk.

This combination results in a powerful digital tool, exhibiting features found only on today's most expensive, top-of-the-line logic analyzers. Yet, the affordable LA-1680 is well within the reach of educators, hobbyists, and industry.

LA-1680 Logic Analyzer \$1250.00
High Impedance Probes
(TTL or CMOS; 8 Channels) \$275.00
Model I Cable Adapter \$95.00
64 Channel Expansion Unit \$1250.00
Demonstration Disk \$5.00

New Inmac Catalog jam-packed with computer/ wp supplies.

Yours free!

Accurately called "the bible of the industry," it's loaded with great products and ideas for your personal computer, minicomputer or word-processing system. You'll enjoy

■ **One-stop shopping.** Over 2,000 products to choose from

■ **Easy ordering.** Mail, phone, or TWX. Verbal PO's welcome

■ **Fast delivery.** 24-hour shipment. Over-night emergency shipments available

■ **45-day trial.** Full refund if not completely satisfied

■ **Guaranteed quality.** All products field-tested to highest standards

■ **Lower shipping costs.** 8 fully stocked distribution centers serving the U.S.

For fastest delivery of your free 100-page Inmac catalog, call 1 (800) 547-5444. 1 (800) 547-5447 in California.

CONVERT YOUR TRS-80 MODEL I, III, OR 4 INTO A DEVELOPMENT SYSTEM

Now you can develop Z-80 based, stand-alone devices such as games, robots, instruments and peripheral controllers, by using your TRS-80 as a development system. The DEVELOPMATE plugs into the expansion connector of your TRS-80 and adds **PROM PROGRAMMING** and **IN-CIRCUIT-EMULATION** capabilities to your system (with or without expansion interface).

Complete instructions and sample schematics are included to help you design your own simple stand-alone microcomputer systems. **THESE SYSTEMS CAN BE AS SIMPLE AS FOUR ICs:** one TTL circuit for clock and reset, a Z-80, an EPROM, and one peripheral interface chip.

When the In-Circuit-Emulation cable is plugged into the Z-80 socket of your stand-alone system, the system becomes a part of your TRS-80. You can use the full power of your editor/assembler's debug and trace program to check out both the hardware and the software. Simple test loops can be used to check out the hardware, then the system program can be run to debug the logic of your stand-alone device.

Since the program is kept in TRS-80 RAM, changes can be made quickly and easily. When your stand-alone device works as desired, you use the Developmate's PROM PROGRAMMER to copy the program into a PROM. With this PROM, and a Z-80 in place of the emulation cable, your stand-alone device will work by itself.

The DEVELOPMATE is extremely compact: Both the PROM programmer and the In-Circuit-Emulator are in one small plastic box only 3.2" x 5.4". A line-plug mounted power supply is included. The PROM programmer has a "personality module" which defines the voltages and connections of the PROM so that future devices can be accommodated. However, the system comes with a "universal" personality module which handles 2758, 2508 (8K), 2716, 2516 (16K), 2532 (32K), as well as the new electrically alterable 2816 and 48016 (16K EEPROMs).

The COMPLETE DEVELOPMATE 81, for Model I, with software, power supply, emulation cable, TRS-80 cable, and "universal" personality module \$329

DEVELOPMATE 83, Model III/4 version, same as above \$329
PM2 PERSONALITY MODULE for 2732A EPROM \$15
PM3 PERSONALITY MODULE for 2764 EPROM \$15

Listing continued

replace it with a new one.

If you want to enter a new category, type it in and answer yes to the save prompt. You can enter more categories or return to the main menu.

Once you've finished entering all your categories, screen 5 appears, listing all the categories (see Fig. 5). Enter 100 to initialize FTR's numeric check tracker. This feature lets you define the starting check number and thereafter automatically increments and posts that number.

FTR accepts string input of check numbers to accommodate money orders or items with numbers and letters or you can make short notes, such as denoting a cash payment. The procedure to implement this system appears in Fig. 6.

Entering Transactions

Once you've set up all your categories, you can begin entering data into them. To enter a transaction, select option 1 from the main menu and answer Y (to continue) in response to the task

SOFTWARE

VISACALC SPREADSHEET	\$79.95
Complete spreadsheet with full screen, cursor control. Make Projections, Reports, Graphs, labels, Searches, Sorts, and Formulations.	
SCRIPT WORD PROCESSOR	\$79.95
Full Screen Text Editor. You may add, move, delete, underline, indent, center, justify. Fully machine code for speed & performance.	
VERSAFILE DATA BASE	\$79.95
Free formatted data base with extensive edit and search commands. Full printer support. High speed operation and menu supported.	
ACCOUNTS RECEIVABLE	\$79.95
Monthly statements, aging reports, journals, automatic totals for posting to Ledger. Easy to add, delete, or modify all 500 accounts.	
ACCOUNTS PAYABLE	\$79.95
Prints checks, monitor cash flow, detailed reports, up to 200 vendors. Handles 1000 transactions. User defined parameters.	
Hundreds of other features! Call for details. Each program comes with an extensive manual and is available on Disk or Cass. for any Model I, III, or 4 computer with 16-64K of memory. All 5 programs may be purchased for only \$299.95!	

DEFENDOIDS

A superior arcade style game with fast action graphics and sound! Your mission is to rescue the fuel tanks from the planet's surface. You must do battle with the evil enemy ships. Machine Language, Model I, III, & 4. \$15.95!

screen prompt. This calls up screen 7 (see Fig. 7).

Notice that the cursor appears to the right of the payee category. As you type in the dollar amount, the characters appear in reverse video. Press the enter key to record the figure and the numbers revert to normal video, indicating that the figure is saved.

Use the down-arrow key to position the cursor at the date category. Enter dates in the format 9.1.83 or 9/1/83. Should you make an error, 99/99/99 appears.

Hit the down-arrow key again, position the cursor by the amount category, and fill that in.

Afterward, bring the cursor to the check number category. If you are making a payment by personal check, press the F2 key and the check number is automatically posted.

If you've made any errors in the entries, use the up-arrow key to position the cursor beside the category containing the mistake and make the correction.

When you are satisfied that all your entries are correct, press the F1 key. Screen 8 appears with all the entries you've made displayed and with three options, listed at the bottom of the screen (see Fig. 8).

Pressing E lets you enter new data. If you press C, all new entries are cancelled and the program displays a message indicating that. You start off with a clean slate, so to speak.

Pressing S saves the data you enter. This operation is indicated in screen 9 (Fig. 9) and FTR assigns a number to that file.

A fourth option (not listed on the screen), R, brings you back to the main menu.

TASK #2: MODIFY DATA

Use ARROW keys to position cursor. Type in data. Press **F1** key when all done.

FILE NUMBER: **1** LAST CHECK #: 1235 (Press **F2** for NEXT Check #)

Payee : Mrs. Jones (Week of 3 Jan 1983)

Date : 1/ 7/83

Amount :\$ 234.65

Category: 2 - EMPLOYEE WAGES

Check # : 1235

Status (A=Active,D=Deleted) : A

Figure 11. Modify data using this screen (screen 11).

20.	Mrs. Jones	1/31/83	-\$234.65	1246	2

Figure 12. A sample tally sheet.

Modifying Data

If you record an error from one of the screens and need to go back to correct it, select option 2, modify data, from the main menu and answer C to the continue/return prompt at the bottom of the task ID screen. The program asks you for the file number to be modified. Should you enter a nonexistent file number, screen 10 appears (see Fig. 10). Press C to try again. An appropriate response calls up screen 11 (see Fig. 11).

Screen 11 is almost identical to screen 8. The differences are that the file number is displayed and a status indicator appears (A for active, D for delete) that lets you keep or remove a record from your tally sheet. It doesn't delete the record, but ignores that file during a tally. Make your correction and press S to save the modified data.

Printing Category Definitions

You will need a permanent record of category definitions, obtained through menu option 5. After answering C at the task ID screen, you see the message "Bring Paper to Top of Page." Press the F1 key. FTR uses a machine-language utility to format reports at 66

lines long and 80 characters wide. The continue and return prompt reappears as a last-minute opportunity to make any changes you want.

Pressing C prints the list of category definitions to be generated. If an error occurs, the program displays an error message and returns you to the main menu. When the categories are printed, the message "Printing Completed. Press ANY key to continue." appears.

Printing Tally Sheets

FTR's primary purpose is compiling tally sheets. Select task 3 from the main menu and answer C to the task identification screen. When the next screen appears, press the F1 key to get the tally sheet printed out or F2 to have the tally sheet displayed on the video screen. In either event, the continue and return to main menu options are displayed at the bottom of the screen.

If you press F1, the message "Bring Paper to Top of Page" appears. If you then press C, the screen clears and the prompt Print (F)ull Tally Sheet or a (P)ortion appears. A full tally sheet contains all records on file, a portion lets you select a range of records and a range of categories.

If you select a portion of a tally sheet, the program prompts you for starting and ending records. You are then asked the start and ending points for tally sheet categories. See Fig. 12 for a sample tally sheet.

Getting Started

Enter the program in Listing 1 and save it under the name FTR. FTR uses a short, machine-language utility, FRMS, to automatically set forms. Since you'll be in Basic, type SYSTEM and press the enter key. When TRSDOS READY appears, type DEBUG ON. Type MF000 and press the F1 key. The standard Debug display appears on the first video (F000) line. Now type 56234E06423E 11CFC9. Check all characters for accuracy. Then press the F2 and escape keys and press the O key. Type DUMP FRMS (START = F000, END = F000). When TRSDOS READY again appears, your directory should show a new file, FRMS. You're now ready to keep track of your financial transactions. ■

EARLY GAMES

FOR YOUNG CHILDREN

Nine educational and entertaining games controlled by a single program. Even very young children can select a game, play it, and select a different game...ALL BY THEMSELVES!

- PICTURE MENU GIVES CHILDREN CONTROL
- MATCH NUMBERS AND LETTERS
- COUNT COLORFUL BLOCKS
- ADD AND SUBTRACT STACKS OF BLOCKS
- LEARN THE ALPHABET
- PRACTICE SPELLING NAMES
- COMPARE SHAPES
- DRAW AND SAVE COLORFUL PICTURES

The large numbers and letters fill the screen with color. Children enter single key stroke responses and get immediate visual and musical feedback. Hints are provided when appropriate. Beyond just teaching children basic skills, EARLY GAMES makes them feel comfortable as they control the computer. Designed for children ages 2½ to 6 years old.

EARLY GAMES offers the child a diverse selection of activities which stimulate the process of problem solving as well as foster individual creativity.

Pamela Bach, Director
Youth World Day Care Center

I took EARLY GAMES home for my kids and they really liked it! It held their attention and they learned from it!

Jeanette Fritze
Computer Saleswoman

EARLY GAMES can help children learn new concepts, information, and skills and also introduce them to the joys and benefits of home computers.

Business Bazaar

They are nightmares common to all business managers at one time or another: an employee's paycheck gets lost in an overflow of paperwork in the manager's office; a client's file is overlooked, resulting in delayed payment; the bookkeeper leaves you muttering, "Where did all the money go?"

More and more companies and small businesses use microcomputers to help them maintain and process vast amounts of valuable information. To meet the demand, software manufacturers have written business software that satisfies just about any office requirement.

This Buyer's Guide provides a sampling of the various business packages available to TRS-80 owners. Besides payroll, general ledger, accounts payable/receivable, invoice, and inventory programs, there's quite a selection of software for both unusual applications and specific industries.

Among the programs that passed our desks were software designed to test and evaluate manager response to different situations, a bookkeeping system developed specifically for gas stations, a construction template program to help contractors determine accurate estimates, an aircraft maintenance program, and several software packages designed for use by Amway distributors.

For each software manufacturer that submitted programs to this guide, we've written a brief summary of what the program does, how much it costs, TRS-80 compatibility, and, where necessary, the program's limitations (listed in parentheses at the beginning of the program description).

Some software manufacturers produce several business programs, so we've included only one or two samples of their product line. You should contact these companies for a catalog and further information regarding their software.

For those of you who already have an inkling of the type of business software you need, quick-reference charts are provided. Listed under each are the names of the manufacturers who make relevant software. Refer to the text for further descriptive information concerning those programs, and for the company's address and phone number.

When reading through this Buyer's Guide, please remember that these listings are based on information supplied by the manufacturer. We have not tested or reviewed these products, and cannot guarantee manufacturer claims. Also, the price of some of these software packages may change by the time you read this issue, so contact the manufacturer for updates on newly released software programs and for revised program prices. ■

SMALL HOME BUSINESS PROGRAMS

(Model I Level II and Model III)

These six programs are designed for the entrepreneur who operates small home-based businesses like Amway and Avon distributorships, and mail-order, insurance, and real estate businesses. All programs are provided on one cassette for \$49.95. Documentation is included. Listings and documentation can be purchased for \$20.

SPEED LETTER: A crash-proof program that generates letters and forms. There are only 10 commands, with

seven of them in a screen menu. Features include review text, save text, read text, add or delete lines, left margin control, automatic paging with numbers, print all or part of text, upper- and lowercase letters, and holds up to 150 lines of text in 16K of memory.

LEDGER: A 12-column ledger that prints out income or expenses with page, month, and grand totals on standard 8½-inch-wide paper. Column 1 is the income or expense amount. The user assigns the other 11 column headings.

MAILING LABELS: Handles 220 names and addresses. Data is sorted on entry by zip code, name, city, or user-defined code. Labels are printed three across, four lines each on either self-adhesive stock or plain paper.

AUTO-DIALER/TIMER: Stores up

to 500 names and phone numbers. User types in the name to be dialed through a \$3 Radio Shack interface relay. Elapsed time is displayed on the screen, and the computer redials the last number entered. Schematic to connect phone is included, and no computer modifications are required.

TOLL CHARGE: Real-time display of phone charges by the second.

INVOICE: Products and prices are stored in memory. The program does all the necessary calculations. A standard 80-column printer is required.

Blechman Enterprises also makes business-related software for Amway distributors. Software packages include Order Verification/Generation, Monthly Bonus Calculation, Monthly Gross Profit, Distributor Family Tree, Ledger, and much more.

MANUFACTURING INVENTORY CONTROL (Models I, II, and III)

A menu-driven, user-friendly, four-level inventory control system that reduces the time and expense of inventory control for the small manufacturer. This system helps control parts, subassemblies, assemblies, and finished goods. It assists in inventory control, purchasing control of parts orders, accounting reports, and material requirements planning. Features of this system include inventory-level reports, below-minimum reports, parts lists, accounting reports, work sheets, on-order reports, parts pick lists/pull sheets, bills of material processing, and much more. Model I/III versions cost \$299.95, and the Model II version sells for \$349.95. Neither comes with a warranty, but you can purchase a sample test data disk for \$29.95 to determine whether or not it's compatible with your needs.

PURCHASING AIDES PACK 01 (Models I, II, and III)

A programmed approach to determine the recommended purchase quantity of an item given a certain set of facts. It prompts you for information concerning the buy choices, order processing costs, freight costs, inventory carrying costs, financing costs, the desired return on investment, and so forth. The output summarizes all these facts and then, using several equations, determines the recommended purchase quantity. Cassette versions are available for \$19.95, and disks sell for \$39.95. If you have a Model I, you must specify whether it is a Level I or II.

PRODUCTIVITY AND QUALITY ANALYSIS (Models I and III)

This system determines a productivity index and quality level index for work performed by assembly or production workers in a small manufacturing firm. It sorts data typed in from simple job cards and quality control inspection tickets to tell you which workers and which jobs are above, on, or below standard. When updated daily, this lets supervisors keep an objective daily pulse on the shop. Plotting the daily reports by worker gives you an objective measuring tool to discuss

workers' performance. Cassettes of this system cost \$29.95 and disks cost \$39.95.

COLOR SOFTWARE SERVICES P.O. Box 1708 Greenville, TX 75401 214-454-3674

SERIES I: BEING BOSS (Color Computer)

Comprises six programs. Being Boss is the first in an ongoing series of computer-assisted management development tools. These programs provide information and guidance for those who are new to management or who want to improve managerial skills. The program contains the following management development aids: Reflections, a self evaluation guide; Assertiveness, learning to take control as a leader; Management Styles, how to approach the leadership role; Decision Making, how to handle decision making; Counseling, helping others solve personal problems; and Stress Control, learning to take care of yourself. Each of these programs is in a multiple-choice questionnaire format where the user is queried on his response to certain situations. A printed evaluation of your performance is provided after you complete the entire questionnaire. This program, which comes on cassette, sells for \$89.95.

ACCOUNTS RECEIVABLE (Color Computer) (16K Extended Basic)

Provides the user with detailed audit trails and history files on all transactions by a customer. It also prepares invoices, mailing labels, aging lists, customer history reports, and an alphabetized customer listing. The user can define discount/net terms for commercial accounts, and finance charges and minimum payments for revolving accounts. This program is suited for integration into the Colorsoft Small Business Accounting Package, and costs \$89.95.

SMALL BUSINESS ACCOUNTING (Color Computer) (16K Extended Basic)

An integrated ledgerless accounting package for a small business. The package includes Accounts Payable, Accounts Receivable, Sales, and Purchase Order programs. It produces income statements, balance sheets, check

registers, accounts payable and receivable status lists, and accounts payable and receivable aging reports. The program handles sales of up to \$1 million and approximately 800 accounts payable/receivable during each user-defined accounting period. Accounts are automatically numbered and each transaction is carried separately such that an account number will correspond to a specific purchase rather than a specific vendor/customer. This system is available for \$89.95.

GENERAL LEDGER (Color Computer) (16K Extended Basic)

An integrated, journal-type double entry accounting package for a small business that includes the General Ledger, Accounts Payable, and Accounts Receivable programs. The system provides you with income statements, balance sheets, accounts payable and receivable status lists, accounts payable and receivable aging reports, journal reports, account listings, and closing summaries. During each accounting period (as defined by the user), the system handles 800 accounts payable/receivable up to \$1 million each. All accounts are automatically numbered. This accounting package costs \$129.95 and is designed for integration with future software modules such as a payroll system, inventory, and so on.

COMPUTER SYSTEMS RESEARCH INC. 66 Rockland St. North Easton, MA 02356 617-331-0450

ACCOUNTING MASTER PROGRAM (Models II, III, and 16)

This program works with either the Inventory and Order Entry program or by itself as an accounting package. Combined with the Order Entry program, you can produce invoices with items, credits with items, and payables to accounts. Used alone, it stores up to 800 customer accounts and provides you with Delinquent Reports, Active Accounts, Full Lists, Billing Statements, Transaction Reports, and Mailing Labels. This program keeps track of accounts receivable quickly and efficiently. It sells for \$200.

INVENTORY MASTER PROGRAM (Models II, III, and 16)

This program stores up to 1,300 inventory items. You can add, modify,

delete, and inquire about any desired item. Manual inventory transactions include Sell, Adjust, Receive, and Order. The program also provides you with inventory lists and purchasing reports. Your customer can use this software program as a stand-alone package for inventory control, or use it together with the Order Entry and Accounting programs. This program costs \$200.

ORDER ENTRY MASTER PROGRAM (Models II, III, and 16)

This program operates only with the other two in order to function. It draws from and posts to the Accounting Master File for customer information, and does the same with the Inventory Master File for product sales information. It handles sales, credits, and payments, but its real worth is in detailed invoicing with items. Here, it keeps track of line totals, invoice totals, and state and federal taxes. On a four-drive Model III, you can store up to 1,800 transactions per month. This program costs \$200.

Other offered programs include Multi-Location Inventory Control, Mailing List, Part Number Cross Reference Program, Invoice Control, and more.

COMPUTERWARE P.O. Box 668 Encinitas, CA 92024 619-436-3512

CHECK LEDGER (Color Computer)

A single-entry bookkeeping system that lets the user define a chart of income and expense accounts. Reporting capabilities include detail account, summary account, written checks, outstanding checks, adjustments, and deposits. Year-to-date dollar totals are maintained for each account, as well as a complete checking account history. Manual account corrections is provided. It sells for \$195.

INVENTORY CONTROL (Color Computer)

Designed to help the retailer, distributor, or businessperson keep control of inventory. The program stores cost and quantity information, updates it immediately, and offers key management report summaries at any time. Formatted reports include General Inventory Report, Cost Extension List, Retail Extension List, Profit Margin Report, Price List, Count List, and Year-to-Date Monthly Sales. You are

Now NRI takes you inside the new TRS-80 Model 4 microcomputer with disk drive to train you at home as the new breed of computer specialist!

NRI teams up with Radio Shack advanced technology to teach you how to use, program and service state-of-the-art microcomputers...

It's no longer enough to be just a programmer or a technician. With microcomputers moving into the fabric of our lives (over 1 million of the TRS-80™ alone have been sold), interdisciplinary skills are demanded. And NRI can prepare you with the first course of its kind, covering the complete world of the microcomputer.

Learn At Home In Your Spare Time

With NRI training, the programmer gains practical knowledge of hardware to design simpler, more effective programs. And, with advanced programming skills, the technician can test and debug systems quickly and easily.

Only NRI gives you both kinds of training with the convenience of learning at home. No classroom pressure, no night school, no gasoline wasted. You learn at your convenience, at your own pace. Yet you're always backed by the NRI staff and your

instructor, answering questions and giving you guidance.

TRS-80, Model 4 plus Disk Drive to Learn on and Keep

NRI training is hands-on training with practical experiments and demonstrations. You not only learn to program your computer, you learn all about it...how circuits interact...interface with other systems...gain a real insight into its nature. Under NRI's carefully planned training, you even install a disk drive, verifying at each step its operation.

You also work with a professional 4-function, 3½ digit digital multimeter and the NRI Discovery Lab,® performing over 60 separate experiments. Both microcomputer and equipment come as part of your training for you to use and keep.

Same Training Available With Color Computer

NRI offers you the opportunity to train with the TRS-80 Color Computer as an alternative to the Model 4. The same technique for getting inside is enhanced by using the new NRI-developed Computer Access Card. Only NRI offers you a choice to fit your specific training needs.

The Catalog is Free. The Training is Priceless.

Get all the details on this exciting course in NRI's free, 104 page catalog. It shows all equipment, lesson outlines, and facts on other electronics courses such as Electronic Design, Industrial Electronics, Video/Audio Servicing...12 different career opportunities in all.

Keep up with the latest technology as you learn on the latest model of the world's most popular computer. If coupon has been used, write to NRI Schools, 3939 Wisconsin Avenue, Washington, D.C. 20016.

Now training includes either the TRS-80 Model 4 Microcomputer with Disk Drive or TRS-80 Color Computer with Computer Access Card; professional LCD multimeter; the NRI Discovery Lab; and hundreds of demonstrations and experiments. (TRS-80 is a trademark of the Radio Shack division of Tandy Corp.)

provided with four costs, four locations, selling history, and vendor information for each item. The program costs \$195.

PAYROLL (Color Computer)

Besides collecting key employee information, this program allows entry of pay rates for standard hours, overtime, and salary. Hourly, salary, and commissioned employees may be paid weekly, bi-weekly, semi-monthly, or monthly. You can sort all the reports by employee number, social security number, employee name, or state code. The program automatically reports federal and state taxes, and permits changing tax rates and maximums according to government changes. The program comes with password protection and sells for \$295.

ACCOUNTS PAYABLE (Color Computer)

This program collects vendor invoice information and reports the business' cash commitments and payment history. For each invoice entered, the program stores the invoice number, ven-

dor, invoice date, invoice amount, and payment document number. Reports include Account Cross Reference, Account Master, Account Summary, Accounts Past Due, Payment Forecast, and Activity. These may be sorted by vendor number, vendor name or invoice date with range selection available for selective reporting. The system is available for \$195.

ACCOUNTS RECEIVABLE (Color Computer)

Provides reliable and timely information regarding the status of all customer accounts. The program tells you which accounts are past due, forecasts how much money to expect for cash flow planning, and keeps you on top of your customer's credit positions. Customer name, address, credit limit, invoice, and payment information is recorded. Available reports include Account Summary, Account Overdue, Account Aged, Payment Forecast, Audit Trails, Account Master, and Account Cross Reference. This system sells for \$149.

COMPUTRONICS INC.
50 N. Pascack Road
Spring Valley, NY 10977
800-431-2818

BUSINESS PAC 100 (Models I, II, and III)

Comprises 100 ready-to-run business programs ranging in interest from inventory control to payroll, and from bookkeeping systems and stock calculations to checkbook maintenance and accounts receivable/payable. Contact Computronics for their 64-page software catalog for more detailed information on the above programs, and also inquire about their VersaBusiness series of business software. Model I and III versions are available on disk or cassette for \$99.95, and Model II versions are available on disk for \$149.95.

P.O. Box 1066
Alamogordo, NM 88310
505-434-1096

CHURCH/CUSTOM LEDGER (Models II, III, 12, and 16)

Two comprehensive general-ledger programs. The Church Ledger is designed to interface with Custom

Data's already successful Church Donations program, while the Custom Ledger is a stand-alone program. Both programs allow the user to track five separate checking accounts with five account types and nine categories under each account type. The Church Ledger permits 100 general-ledger accounts and 570 transactions per month, and the Custom Ledger allows 200 general-ledger accounts and 2,175 transactions per month. Both generate a chart of accounts, a trial balance, a statement of income and expenses, a balance sheet, a transaction journal, a check register, checkbook reconciliation, a budget report, and a sessions transaction journal. For those with two-disk-drive systems, the Model III version costs \$180, and the Model II, 12, and 16 versions cost \$225. Four-disk-drive systems cost \$199 for the Model III, and \$249 for Models II, 12, and 16.

CUSTOM SOFTWARE SERVICES
P.O. Box 150
Porterville, CA 93258

ENHANCEMENTS TO R/S PAYROLL (Models II, 12, and 16)

Improvements to Radio Shack's payroll program increase capacity to 999 employees on hard disk (475 employees with a two-disk-drive system), replaces the Basic sort with a machine-language sorting program capable of sorting 999 employees and creating an index file in under a minute, allows escaping from a displayed employee's check during payroll processing without creating the check, sends the screen's contents to the printer during editing and payroll processing sessions, and adds the amount of the check in word form to all payroll checks.

The enhancements are available for \$100, and a copy of your R/S Payroll must accompany your order to verify that you have purchased the program. The disk is reformatted under TRSDOS 2.0 and the improved versions of each program are copied to your disk.

ACCOUNTS RECEIVABLE SYSTEM (Models II, 12, and 16)

Designed for trucking companies, this system handles up to 300 customers, 500 transactions per customer each month, with a maximum of 7,600 transactions each month when used on a three-disk-drive system. Also included are five load-management programs for

TRS-80 MODEL III ASSEMBLY LANGUAGE

A complete course in assembly language, written for the beginner. Basic concepts, the Z-80 instruction set, complete Model III ROM and RAM information, programming examples, the disk controller, the TRSDOS 1.3 operating system, RS-232-C interface.

With the book you can also purchase Monitor #5, a comprehensive machine language monitor (specify Model 1 or 3).

Book only \$16.95
Book and Monitor #5 on disk \$29.95

HOME BUDGET

Analyzes your income and expenses, computes monthly and year-to-date summaries showing income tax deductions.

Model 1/3/4 disk version \$49.95
Model 1/3/4 cassette version \$29.95
Model 2/12 or IBM/PC version \$59.95

SMALL BUSINESS ACCOUNTING

billing on a per-barrel, per-gallon, per-ton, per-hundred weight, and percentage of hundred weight basis.

The system generates a complete set of reports, including sales analysis reports and year-to-date summaries for each customer, as well as standard statements and invoices. This accounting system is priced at \$500.

DATA MANAGEMENT SYSTEMS

211 N. El Camino Real
Suite 101C
Encinitas, CA 92024
619-942-0744

CCDS (Model I6)

CCDS is a relational data-base system. The user views data as simple collections of flat files or tables, and each row of a table is viewed as a data record. Records may be selected based on data values, and specified fields of each record are displayed or printed. In addition, you can combine data from different files and display or print the combination. Standard and formatted reports and displays can contain derived fields, and users can enter simple English

queries for retrieval. CCDS is offered at an introductory price of \$595 and comes with a 30-day trial period.

DEMI-SOFTWARE

DEMI-PLAN: PROJECT MANAGEMENT SYSTEM (Models I and III) (48K)

A project management program for defining and maintaining a file of project tasks and resources. The information is used to print various forms of Gantt Charts, Resource Histograms, and Task/Resource reports. The system determines the critical path of a project, and lets the project manager introduce "what-if" data to test the effect of date and resource changes on the project's completion date. It sells for \$49.95 post-paid, and documentation only costs \$5.

Demi-Software manufactures numerous business-related programs other than their Project Manager System. A sampling includes Personal Finance Package, Mailing List, Label Printer,

MANUFACTURING CONTROL SYSTEMS (Models II, III, and 16)

A labor reporting/performance system that monitors and measures the efforts of your work force. It provides you with the daily, weekly, and monthly information you need to control your costs. You can trace each employee's work efforts, each department's performance, and all production-job labor costs. In addition, you can monitor indirect labor charges on your expense accounts with weekly and monthly reports. The system handles 400 employees, 500 production jobs, and 200 departments or work centers. The Model III version sells for \$345, and the Model II/16 version for \$445.

Eltech makes nine other business programs, including Shop Order Control, Purchase Order Control, Manufacturing Job Cost Control, Inventory Control, Bill of Materials Processor, Production Planning Control, Material Planning Control, and others. Contact Eltech for further information concerning product descriptions, pricing, and Radio Shack compatibility.

DECISION ANALYST

(CP/M Operating System Required)

A program package that helps businessmen analyze complex business problems where many alternatives and/or criteria exist. It takes the user through eight menu-selected sections that include problem definition, statement of decision purpose, establishing and valuing must and want criteria, calculation of criteria values, defining alternatives, weighing and scoring alternatives against criteria, assessing possible adverse consequences, and final conclusions. This program is offered at \$139, and it is recommended that the user have access to an 80-column printer.

G&G CUNNINGHAM, CPAs
610 Park Blvd.
Austin, TX 78751
512-458-5760

G&G GL (Model II)

A general ledger program written by a certified public accountant for accounting practices with numerous client records. The program supports as many as nine departments. Printouts are available for each department, all departmental information, or summary information only for all departments. The chart of accounts for a particular installation and the number of transactions between closings are both unlimited, subject to the user's disk space. The program prints standard transmittal letters to accompany prepared financial statements. This package costs \$495 and comes with a 30-day refund if you are not satisfied.

G&G 1040 (Model II) (64K)

A tax preparation package that accepts IRS-supplied forms as input sheets. It supports 27 IRS forms and the results of all calculations are carried to other forms as appropriate. Where computations are necessary to choose the least-tax alternative, the program selects and computes the result with the lowest tax rate. A variety of print options are available, and you can easily recompute and reprint your entire return in fewer than 15 seconds. The Professional Series costs \$750, and the Starter Series (11 schedules, and no depreciation or batch options) sells for \$195.

GOOD SOFTWARE CORP.

12900 Preston Road
Dallas, TX 75230
214-239-6085

INVESTOR III

(Models II, III, 12, and 16) (64K)

Allows you to quickly evaluate real estate investments. Calculate up to 20 years of projections based on depreciation tax shelter, future property values, mortgage balances, capital gains and recapture taxes, net proceeds from resale, return on equity, and internal rate of return. A sensitivity analysis feature permits rapid change of assumptions and revised projections with output to printer or screen.

The program costs \$249 plus \$5 shipping and handling, and comes with a 30-day warranty. Good Software also

replaces defective disks at a substantial discount. Demo packages cost \$50 plus \$5 shipping.

GOOTH SOFTWARE

931 South Bemiston
St. Louis, MO 63105

INCOME TAX PROGRAMS

These 70 Tax Programs, including the 1040, 1040A, 1040EZ, all schedules, and most of the forms, sell from December 1 through April 1 of each year. On January 15, the 1120, 1120S, 1041, and 1065 are ready for distribution. Each of these tax programs comes in the Revproc printing format as approved by the IRS. The computer prints the entire form, so there is no need to obtain IRS forms or schedules. Exceptions to this are those forms that the IRS requires in original format. The programs cost \$24.95 per disk. Contact Gooth Software for further information on specific tax programs.

HOLMAN DATA PROCESSING

2059 West Lincoln
Oroville, CA 95965

Executive Software's answer to business problem solving: Decision Analyst.

Balance Sheet, Statement of Changes in Financial Position, and Income Statement. Transactions can be entered, edited, and listed. You can even exit without posting. A test set (\$50) lets you check the suitability to your business. The complete system is priced at \$149.95.

ACCOUNTS RECEIVABLE (Models I, III, and 4)

Handles up to 5,000 customers and 15,000 transactions. The program has a balance-forward system, and is capable of entering and posting 120 invoices per hour. You can add a customer in 30 seconds without having to sort the customer file. Reports include aging, copy of statements, labels, late charges, posting audit trail, and so on. A test set limited to 15 accounts sells for \$50. The complete system is priced at \$149.95. The General Ledger program is only \$50 if you order it with Accounts Receivable.

HOWARD W. SAMS & CO. INC.
4300 West 62nd St.
Indianapolis, IN 46268
317-298-5419

MIND TOOLS (Model II) (VisiCalc)

This program temporarily interlocks with the VisiCalc spreadsheet so you can immediately perform 17 common financial planning calculations. Mind Tools allows you to calculate present, net present, and future values; yields; internal and financial management rates of return; and basic statistics. It also allows break-even analyses, depreciation schedules, and amortization tables. This system costs \$69.95, and comes with complete documentation, including 128-page user's manual and a 40-page quick-reference guide.

MAGNUM (Model III) (48K)

A powerful data management system that lets you create, store, search out, sort, edit, display, and print records in data files up to 1,200 records long. You can search 10 ways for up to eight items in one or all fields, and display or print the results in record-order or sort on up to three fields. Magnum prints any of four predefined columnar reports on any of three mailing-label formats and prints on up to six different forms, such as checks and invoices. This software package sells for \$79.95. An 80-column printer is recommended.

HOWE SOFTWARE
14 Lexington Road
New City, NY 10956
914-634-1821

SMALL BUSINESS ACCOUNTING (Models I, II, and III)

Keeps track of income, expenditures, and payroll for a small business. Enter income and expenditures on a daily, weekly, or monthly basis. The program computes monthly, through last month, and year-to-date summaries. The payroll section, not included in the cassette version, records individual employees and their paychecks with up to six categories of payroll deductions. The disk version sells for \$59.95, the cassette version for \$29.95, and the Model II version for \$69.95.

MAILING LIST (Models I, II, and III) (48K)

Maintains mailing lists of up to 1,328 names. Commands allow adding, changing, deleting, and finding names. The program sorts by machine language, according to the data in any field (name, address, and zip code). Labels are printed in up to four columns in master list or on video display. Tabs adjust to fit any size labels. The program is available only on disk. The Model I/III version costs \$69.95; the Model II version is \$79.95.

IN-MEMORY DATA-BASE MANAGEMENT (Models I, II, and III)

Defines files of various descriptions and maintains them on either cassette or disk. An in-memory system, the program allows files of up to 50 fields, with the number of records available determined by RAM space. Commands include add, change, or delete records; find a specific item; sort according to the data in any field; print file on display or printer; save file on cassette or disk; and total items in a single field with or without comparison. Reports are formatted in several ways. The cassette version costs \$29.95, the disk version \$34.95, and the Model II version \$49.95.

SMALL BUSINESS MANAGEMENT SYSTEM (Models I, II, and III)

Contains everything you need to manage a small business. The software includes Order Desk, to enter orders and print invoices and mailing labels;

Bookkeeping, a complete general ledger; Inventory, summarizes all products sold by product type and price charged; and Customization, a complete installation package for each business to tailor the program to its own requirements. Before you buy this system, check its capabilities and limitations. The Model I/III version sells for \$350, the Model II version for \$400.

JOSEPH NICHOLS PUBLISHER
P.O. Box 2394
Tulsa, OK 74101
918-583-3390

WRITER'S PROFESSIONAL SUBMISSION REGISTER (Model III) (48K)

A menu-driven program that lets the writer record each submission by manuscript title, publisher or magazine, address of publisher or magazine, date of submission, and identification of the literary form. An update feature provides the date of acceptance or rejection, and a comment line for recording money received or editorial remarks.

The program displays or prints the current submission of a manuscript, all the places the script was submitted, all manuscripts sent to a particular publisher or magazine, a list of all the submissions in a particular literary form, and a listing of the complete register. The disks hold approximately 150 manuscript title records, 2,500 submission records, and 300 addresses. The Register sells for \$59.95 on two disks written in Cobol.

**K.J.K. MANAGEMENT
GROUP INC.**
Systems Division
546 Columbian St.
Weymouth, MA 02190
800-323-5511

GAS-PRO (Model III)

A comprehensive bookkeeping system developed specifically for service stations. It permits shift-by-shift check-out of the day's gas and repair sales, accumulating to a one-page sales summary with a detailed statistical analysis of gas sales. Gas-Pro maintains accounts receivable, prints customer statements, tracks accounts payable, details invoices for payment, provides a daily breakdown of parts and labor into 20 user-defined categories, and it tracks mechanic's sales and commissions

weekly or monthly.

It is available from K.J.K. for \$6,800, including hardware, software, disks, in-house instruction on system use, and free system updates for one year.

LIZCON TRADING

2949 South 3rd West St.
Salt Lake City, UT 84116
801-484-8179

A/R-STATEMENT OF ACCOUNT (Models I, II, and III)

Print the following: statement of account, statement of commission, accounts receivable ledger, accounts receivable aging, price list by product class, alphabetical listing of customers, mailing labels, and alphabetical listing of vendors. The random-access method creates all data files and speeds data update and retrieval. The Model I/III version costs \$199, and the Model II version \$289.

INVOICING-INVENTORY PROGRAM (Models I, II, and III)

Lets you update quantity-on-hand in the inventory file while printing the invoice. With the data base, you can print the following: product inventory ledger, price list by product class, alphabetical listing of products, items below reorder level, alphabetical listing of customers, mailing labels, and alphabetical listing of vendors. Model I/III version sells for \$199, and the Model II version for \$289.

MAILING LIST PROGRAM (Models I, II, and III)

Lets you print mailing labels not only by city, state, and zip code, but also by priority coding. This permits you to selectively print mailing labels according to preference. The Model I and III versions each sell for \$99, and the Model II version sells for \$189.

INVOICING-A/R-INVENTORY PROGRAM (Models I, II, and III)

Updates quantity-on-hand in the inventory file while printing the invoice in addition to posting invoice data to the accounts receivable file. You are able to print the following: statement of account, statement of commission, accounts receivable ledger, accounts receivable aging, product inventory ledger, price list by product class, alphabetical listing of products, items

below reorder level, alphabetical listing of customers, mailing labels, and alphabetical listing of vendors. Model I/III version costs \$399, and the Model II version costs \$499.

VIDEO TAPE RENTAL SOFTWARE (Model III)

Allows you to print sales receipts and interact with customer and inventory files. You can quickly track down a rented item by entering its inventory number; the screen shows the name of the renting customer and the date rented or returned. The program is priced at \$399.

MANAGEMENT SERVICES

2901 Clendenen Lane
Longview, TX 75601
214-757-4558

MARKET MASTER (Models I, II, and III) (48K)

Market Master, a stock and commodity market analysis tool that creates and maintains large price data files, tests a trading system in various markets, graphs prices and results of a trading system, provides daily buy/sell recommendations, and provides printouts in any report mode. Nine versions of this system are available, each containing one of the following unique trading systems: Dual Moving Average, Percentage Band, Channel, Oscillator, Delay Oscillator, Delayed Channel, Linear Regression System, Composite Index, and Exponential Internal Index. Each version of Market Master sells for \$124.95. If you want to purchase the complete set, the company recommends that you buy the Magnum series for \$595 on the Model I/III and \$695 on the Model II. The Magnum series is a more powerful version of the Market Master system.

Market Master is just one of several stock programs put out by Management Systems. A sampling of programs includes Datamax, Comdata Package, MJK Package, Analyst II, Data Files, and the Magnum System.

Stretch the Twelve Days of

Give a gift subscription to **80 Micro** today and relax . . . you can't find a better gift for active computerists. Every issue gathers together the latest programs and projects for Radio Shack's personal computers, business computers, and portables. Your favorite computerist will be busy year round with:

Powerful Utilities—save time and effort and do more computing than ever before. Recent issues have included ways to improve Electric Pencil*, a program-to-program data transfer, and a cassette operating system.

Programming Techniques—learn how to program and spend less on software. Pick up a second language for special applications. Get faster results with machine-language subroutines. . . the monthly column "The Next Step" shows how.

Hi-res Graphics—make better business presentations with fancy printouts. Illustrate games with eye-catching details. Create unique 3-D art. It's all possible with articles on advanced graphics techniques.

Business Applications—increase office efficiency. Learn the business models' different capabilities. And keep abreast of developments for the Model 100* with reviews, applications, and utilities in "C•Notes."

Exciting Games—enjoy arcade games, adventure games, and simulations. Use the program listings to add features to other games. Or record high scores in "The Gamer's Cafe."

Two-way Communication—get definitive answers to technical questions in "Feedback Loop." Respond to articles, editorials, and news with "Input." Or submit an article for publication. **80 Micro** is a forum for ideas, not a one-way street.

"News" & "Remarks"—discover the latest industry trends and how they'll affect consumers. Learn about new services or novel applications. And get the inside story with publisher Wayne Green's outspoken editorials.

Home and Hobby—break the ice at a party with a singing computer. Or make electronics projects easier with a circuit-board scanner. Whatever the subject, there's always something of use in **80 Micro**.

Buyer's Guides—comparison-shop from home and save hundreds of dollars. Get all the facts on graphics software, printers, utilities, disk drives & disks, and more.

Candid Reviews—use "Reviews" and "Review Digest" to find out a product's strengths and weaknesses *before* it leaves the store.

80micro

the magazine for TRS-80* users

®

Christmas into Twelve Months

Know all about the latest releases with "New Products." Now every purchase can be a sound investment.

Hardware Projects—get quality equipment and hours of fun in the shop. Build a Model II* capacitance meter. Diagnose acoustic couplers. Or repair digital circuits. Customize any system to meet specific needs.

In-depth Series—become a local expert in any field. Learn computer cryptology, or how to use data files. Give the Model I/III* color capability. Discover APL, Assembly, Lisp... and more.

Give a gift subscription to **80 Micro** today and relax. Why hassle with holiday crowds and pushy salesmen when you can avoid the last-minute rush? Christmas shopping has never been easier.

Just fill out the coupon or the attached card and return it now to **80 Micro** Subscription Department, P.O. Box 981, Farmingdale NY 11737. A full-year subscription is only \$35.97. That's a savings of 27% off the newsstand price...and convenient home delivery is FREE.

Give **80 Micro**. Your favorite computerist will thank you again and again and again.

Micro Architect's Mail-X program prints labels, and accesses over 32,000 records in one file.

Continued from p. 161

this software package controls inventory, verifies incoming SA-I orders, and compiles PV and BV for personal orders. The program provides inventory initialization, restocking, and non-order withdrawal. Any product can be checked on the display at any time, and the data updated or edited as necessary. A random-access disk file provides full information on 450 products, including stock number, name, PV, BV, and wholesale and resale costs. The program also accommodates detailed information on 200 distributors. Reports provide Inventory Status, Sales, Product Records, Reorder Needs, and Distributor Records. The program is supplied with a 50-page manual and comes with demonstration figures in several of the files. It sells for \$149.95.

THE AMWAY COMPANION (Models I and III)

A supplementary program that interacts with the indexes and files of the Amway Business Manager package to provide the following features: automatic printing of a single-page or multi-page SA-2R RDC order, with all information placed in the appropriate spaces of the order lines; order information inserted from the reorder file of the Business Manager program into the Companion program with a month-to-date total of PV and BV feature; product rearrangement and product updates; on-screen scrolling of all product records; and page-formatted printouts of Product Records, Inventory Status, and Sales with page heading and num-

bering. The program costs \$49.95 and requires a friction-feed printer if you want SA-2Rs single-sheet printed.

AMWAY BONUS MANAGER (Models I and III)

Another supplementary program for the Business Manager software package. This program provides the following capabilities: printed reports on downline groups and families, on-screen and printed reports on upline relationships of any distributor in the Business Manager's files, calculation of bonuses due to each distributor, editing feature to update any distributor's record filed with the Business Manager, and added transfers and other bonus information for a complete record of bonuses receivable and payable at any level. This supplementary package sells for \$99.95.

MICRO ARCHITECT INC.
96 Dothan St.
Arlington, MA 02174
617-643-4713

INV-V (Models I and III) (32K)

An advanced inventory management and control system that consists of an initialization, data-base manager, and report manager modules. The inventory item is randomly accessed by a nine-digit alphanumeric key. Reports give you order information, performance, and formatted dump of your data base. This system key-random accesses over

1,000 items (2,400 on a Model III), and has the following features: screen input, order entry, shell sort, and a powerful report writer. This program sells for \$89; for an additional \$10 you receive an optional data disk.

Micro Architect manufactures over 30 other business programs for the Models I/III and Model II computers. A small sampling includes a cassette data base, stock security information system, sorting utility, sale analysis, mailing list system, accounts receivable, general ledger, payroll, accounts payable, and so on.

MICRO 80 INC.

Oak Harbor, WA 98277
800-528-6050 (Orders only)
206-675-6143 (Inquiries)

MANAGEMENT SYSTEM II (Models I and III)

A cassette-based file management program executing all commands by single-letter entry. File presentation is a maximum of two horizontal lines (100-plus characters) with one to nine vertical columns. Column titles are easily created, and files may be added, updated, listed, deleted, or saved to either tape or printer. Special features include a machine-language sort of any column you choose and a total function for adding integers in any column. There is also a Labels command that lets you produce mailing labels, file labels, and so forth. The cassette is priced at \$26.95.

MICRO-ORGANIZER I (Models I and III)

A three-program set that itemizes expenditures by the day, week, month, or year. You can analyze necessities, scrutinize non-essentials, and review wasteful spending habits. It comes with a claims adjuster program so you can conduct an accurate inventory of your possessions and account for your untold assets. The system also features Schedulizer, an up-to-date appointment calendar. This program is available on both tape and disk at \$19.95.

MICRO-ORGANIZER II (Models I and III)

A three-program set capable of creating and manipulating name and address files. Comes with Comparison Shopper, a comprehensive cross-reference system that identifies and com-

Which TRS-80* Accounting Software Do I Buy...

That's a tough question. I know, I asked it myself not very long ago. I'm Mike Motta. As president of Shawmut Systems, specialists in TRS-80* custom software, my customers were asking me for Model II and 16 Accounting Software — GL, AR, AP and Payroll. But I said "Why write the software. There must be a good package already available." So I searched for the best I could find. And I found it!

Now, when I tell you that these are the best Accounting programs I've seen on a microcomputer, you probably think that you are just listening to another sales pitch. But you're not. You're listening to a businessman with over twenty years combined experience in sales, management, and programming. So when I say that these programs will work for you, it really means something.

Each program, designed for the Model II or 16, will work with one or more floppy or hard disks. With each program, I'll include a 200 page manual written with the first time user in mind, and a set of sample data files so you can start using the program right away.

But I won't stop there. If you have a question, or a problem, call me. You won't get an operator, or order taker. You'll get me. And if I can't talk to you on the spot, I'll call you back. And I'll fix your problem. FAST.

Now I could say a lot more about these programs, but you really won't know how good they are until you try them. So, order the programs you need, and try them for 14 days. If you're not convinced that these are the programs for you, send them back, and I'll refund your money.

My price for these programs is only \$289.00 each, postpaid. I could charge hundreds more, but I want you to have the best programs at the best possible price. So mail or call your order in today. I'll make sure you'll be satisfied.

RS232 Serial Interface Breakout Box - Tester

Test your RS232 interface and peripherals quickly and inexpensively with the RS232 tester from Computex. Twelve Tri-Color LED's monitor the status of 11 of the most common RS232 signals while the twelfth LED allows you to check any of the lines using a test probe. The Tri-Color LED's glow red indicating positive signals, green for negative, and yellow indicating data flow. Three 8 position switches allow you to isolate any signal path between your interface and peripheral device, or replace the switches with headers and you can crosswire to configure for DCE or DTE equipment. Unlike many of the other RS232 testers, ours uses high impedance op amps which eliminate the possibility of loading the lines or damaging your interface. Easily one of the most versatile testers on the market. Order yours today! - You'll only regret not having one the first time you need it!

Dual Printer Switch

\$29.95

Assembled & Tested

The Dual Printer Switch from Computex can be used in one of two ways: (1) Connect two printers to one computer -or- (2) Connect two computers to one printer. Works with MOD I, III, & IV. Six inch cable from computer to printer switch is \$9.95. IBM P.C. model also available. Call for info...

relation entry, and provides three estimates of communalities: units, absolute maximum row, and squared multiple correlations. Priced at \$95.

DISCRIMINANT FUNCTION: For up to 58 variables. Discriminant function coefficients, F-ratio, cutoff point, and z-score cutoff points. Dichotomous groups. Available for \$70.

STEPWISE MULTIPLE REGRESSION: For up to 61 variables. Each step output includes regression coefficients, regression and residuals tables, multiple correlation coefficient, standard error, F-ratio, means, standard deviations, intercorrelations, and so on. Printed listings of residuals for each observation. Priced at \$120.

MATRIX MANIPULATION: Outputs the addition, subtraction, multiplication, inversion, and transposition of matrices of up to 40 rows or columns. Menu-driven, and provides for the solution of a system of equations of up to an order of 40. Sells for \$45.

ROCKWARE DATA CORPORATION

**P.O. Box 365
Plano, TX 75240
214-596-0588**

SUPERTAX I (Models I, II, III, and 16)

Generates summaries of pages 1, 2, and Schedule A of Form 1040. It also prints an overall summary of the return showing Adjusted Gross Income, Itemized Deductions, Taxable Income, Regular Tax, Income Averaging Tax, both Minimum taxes, and Payment Due or Refund. This program also calculates the moving expense deduction, investment credit, taxable gains, political and child care credits, medical limitations, and more. The program is tax deductible and costs \$24. Subsequent year updates are subject to a 20 percent discount.

SUPERTAX II (Models I, II, III, and 16)

This package includes the above Supertax I program as well as the more detailed Supertax II program that performs all of the Supertax I calculations and prints the income tax return. It prints page 1, page 2, and Schedules A, B, and G of the 1040 tax form and the 3468 form using the tractor-feed income tax forms supplied with the program. It sells for \$31.50.

SUPERTAX III (Models I, II, III, and 16)

Includes both the Supertax I and Supertax II packages plus a program to calculate and print Schedule C of the 1040 form. Also included is a stand-alone depreciation program that calculates and prints your depreciation schedule using both the old rules and the newer ACRS rules. Output from the depreciation program serves as a supplement to IRS Form 4562. This program package sells for \$36.50. Eight-inch disks are \$2 above the listed price for each of the Supertax programs.

SHAWMUT SYSTEMS **P.O. Box 324 Somerset, MA 02726 617-672-9794**

ACCOUNTS RECEIVABLE (Models I, II, III, 4, 12, and 16)

A complete invoicing and monthly statement-generating system that keeps track of current and aged accounts receivable. This package maintains a Customer Master File of customer name, address, phone number, type of account, current balance, tax rate, and other useful account status information; and a Transaction file that contains information on each invoice and payment posted to the customer account.

Other features include Summary Aging/Detailed Aging reports, recovery routine for hardware failure, sample data for demonstration, open credit reconciliation procedures, automatic customer billing option, open item or balance forward, and much more. This program interfaces with the General Ledger System to provide automatic monthly journal entries. Pricing for this package is: Models I/III \$139; Model 4 \$189; Models II/12/16 \$289; and Model 16 with Xenix \$489.

PAYROLL (Models I, II, III, 4, 12, and 16)

Allows a company to prepare periodic payroll for hourly, salaried, and commissioned employees while accumulating relevant tax information. It generates monthly, quarterly, and annual returns that are filed with local, state, and federal governments. It also prepares employee W-2 forms and maintains an up-to-date information reference for each employee. The Payroll System includes tables for federal withholding and FICA, as well as with-

holdings for any state and up to 20 localities for precomputed or user-generated tables. The system automatically produces payroll checks. It interfaces with the General Ledger to provide automatic monthly journal entries. The Payroll System costs the same as the Accounts Receivable System.

GENERAL LEDGER (Models I, II, III, 4, 12, and 16)

The TCS General Ledger System records financial transactions and related balances; provides accurate and timely statements (balance sheet and income statement) that describe your current financial position; and provides you with comparative data on your financial position one year prior. The program operates a master file with a Chart of Accounts listing the current balance of each account as well as the year-to-date, budgetary, and previous year amounts; and a Transaction File listing transactions for each accounting period.

A Trial Balance program matches accounts in the master file with appropriate transaction entries from the Transaction File at the end of each accounting period. It provides level totals, lists each account and its transactions, and then updates the master file to produce a current-month master file. Statements produced include a balance sheet, an income statement, and a department-income statement. The General Ledger System costs the same as the Shawmut Accounts Receivable program.

ACCOUNTS PAYABLE (Models I, II, III, 4, 12, and 16)

Keeps track of current and aged accounts payable. You get programs to maintain a complete record for each vendor; help determine which vouchers to pay by due date, discount date, or within certain cash requirements; and a program to automatically print checks and a check register. Invoices enter into the system through the Enter Vouchers Program and contain information on invoice date and amount, discount date and terms, and due date and terms.

Reports generated by this program include Open Voucher Report, Cash Requirements Report, and Aged Payables Report. The system prints checks for each vendor, and lists all vouchers paid by this check. In addition, there is an End-of-Period Processing Program that accumulates the debit and credit transactions passed to the user's general ledger, and prints out a transaction register with this data. The pricing

SMALL BUSINESS SYSTEMS GROUP

6 Carlisle Road
Westford, MA 01886-5762
617-692-3800

GENERAL LEDGER (Models I, II (64K), and III)

Consolidates all financial data from other accounting sources, providing a complete overview of operations and performance. It permits great flexibility in formatting account charts, with user-selected account numbers and descriptions, system size and numbers, and management reports. The program stores 2,500 accounts and 2,250 direct and external postings per month, with all items validated before acceptance. Reports are generated for months, quarters, years, and previous quarters by department or company, and include trial balance, balance sheet, income statement, update, and user-defined reports. This software package costs \$250 on a floppy disk and \$450 on hard disk.

Other SBSG business programs in-

clude Accounts Payable, Accounts Receivable, Payroll, Invoicing, and Inventory. They have a Remote Computer Typesetting, Electronic Mail, Sort, Client Billing, and Communication Systems packages available.

SOFTWARE MODELS

23913 Bowl Road
Box 1029
Crestline, CA 92325
714-338-5075

CONSTRUCTION TEMPLATES (Models I, II, III, 12, and 16)

A package of construction estimates that cites figures from the "National Construction Estimator" used by all contractors. The programs determine construction costs based on type of land, legal fees, plans, permits, site clearing, and all labor and materials necessary. The program provides you with an accurate estimate so that your bid is neither too high nor too low. Each estimate is independent so you can choose the ones to use. The last template calculates your profit. The program sells for \$59.95 and comes on disk with documentation and a warranty card.

FINANCIAL TEMPLATES (Models I, II, III, 12, and 16)

These models forecast your sales and finances, and provide you with a complete projection to show bankers and investors. The program includes a break-even analysis, cash budget, means projected, profit/loss, balance sheet statements, ratio analysis, and five depreciation tables and formulas to calculate net present values. Examples come from SBA forms. This program is available for \$59.95.

REAL ESTATE TEMPLATES (Models I, II, III, 12, and 16)

NIREB Forms B, C, D, G, and I-A provided on disk accomplish the following: Form B analyzes a single-income property, Form C compares various investments, Form D compares tax results from various types of taxable income, and Form G determines the gain on sales subject to income tax. The fifth form is the Net Proceeds of Sale, and the last is Form I-A, which calculates the true rate of return in percentage form. This program package sells for \$59.95.

T80-FS1 Flight Simulator

See your dealer!

Available for Model I or Model III: \$25.00 on cassette or \$33.50 on disk (with enhancements) All versions require 16K.

If you order direct, please specify whether you have Model I or Model III (the media are different) and whether you want disk or cassette. Include \$1.50 and indicate UPS or first class mail. Illinois residents add 5% sales tax. Visa and Mastercard accepted.

If you don't yet own a disk, don't fret. You can upgrade anytime. Cassette users may send back their cassette (but not the manual) along with \$10 (first class shipping included) and receive the disk version.

HOME TEMPLATES (Models I, II, III, 12, and 16)

These models manage your yearly budget, your weekly shopping list, an amortization schedule for your loan payments, determine how long your IRA money lasts after you retire, and calculate your IRS Schedule A deductions. It costs \$39.95 and comes on disk.

SOUTHWEST SYSTEMS Microcomputer Sales & Services 44 3rd Ave., Suite F Chula Vista, CA 92010 619-425-5500

FULL SERVICE PAYROLL (Models I and III)

Provides for up to 100 employees grouped into a maximum of six different departments. This flexible method provides for payment of employees on salary, hourly rates, commission, or draw accounts. There are 20 different deduction categories used to automatically compute non-standard deductions for employees. The system uses either pre-printed checks or a regular company checkbook. A versatile error-check feature provides for checkpoints during payroll processing.

At the end of each quarter, the 941 continuation sheet is prepared, as well as a summary for preparation of state and federal tax forms, and a summary of non-standard deductions by category. This program sells for \$150, and the accompanying documentation costs \$15. This program contains California state tax computations, so you must inquire about the availability of other states' before ordering.

Southwest Systems manufactures several other business-oriented programs that include Minibiz Bookkeeping System, Aircraft Maintenance System, Project Cost Control System, Manufacturer's Cost Estimating System, Order Entry & Invoicing System, and much more.

STAR VALUE SOFTWARE 12218 Scribe Drive Austin, TX 78759 512-837-5498

OPTIONVUE-A (Models I and III) (48K)

A stock market spreadsheet program for brokers and individual investors that compares investment alternatives

using basic option strategies. The program quickly answers "what-if" questions and is capable of handling the following types of investments: ordinary stock purchase or short sale, ordinary call or put option purchase, covered writing, naked writing, and ratio writing. It is available on disk or cassette for \$189 which includes documentation and shipping.

OPTIONVUE-B (Models I and III) (48K)

Also a spreadsheet program, but designed to work with situations involving the simultaneous use of two options on the same underlying stock (spreads, straddles, and combinations). The program takes into account an estimate for trade commissions based on the user's choice of full service or discount broker, and opening cost is based strictly on the Securities and Exchange Commission rules for margin requirements. Available on both disk and cassette, it sells for \$189.

OPVALU/ADVANCED OPVALU (Models I and III) (32K)

OPVALU is a program for determin-

ing the fair market value for listed put and call options. It is ideal for spotting an overpriced or underpriced option in the market. It sells for \$39.95.

Advanced OPVALU determines the fair market price for arrays of listed put and call options on a single issue. It is available for \$129. Both come on either disk or cassette and with complete documentation.

TARANTO & ASSOCIATES INC. P.O. Box 6216 121 B Paul Drive San Rafael, CA 94903

PAYROLL (Models I and III)

Consists of 28 programs that maintain files, perform pay entry and verification, compute pay and deduction amounts, and print reports and forms. Employees may be hourly or salaried, and miscellaneous deductions are selected on a one-time or recurring basis. You can write paychecks outside the system and incorporate data into files for inclusion in historical records, payroll journals, and tax forms. This package computes all taxes, and is capable of printing 941A and W-2

forms. It sells for \$75, and the user's manual costs \$20.

This is just one of several business software programs that Taranto & Associates makes for the Model I/III. Other programs include Accounts Payable, General Ledger, Cash Journal, Accounts Receivable, Invoicing, and Inventory Control.

MEMBERSHIP ACCOUNTS RECEIVABLE (Models II, 12, and 16)

This package is for organizations that supply products or services to organization members, rather than customers. The program monitors up to 8,000 members and 20,000 transactions. Special features include a balance-forward system that discards transactions at the end of a month, cash accounting that reports income as collected, and monitors up to 38 income accounts for direct posting, a periodic billing facility for dues that has 20 different dues rate categories to select from, recurring transaction facility for individual members, aged statements with descriptive reference, and selective mailing facility in member code or zip code sequence. This software package is available for \$500, and runs under

TRSDOS or CP/M.

Taranto & Associates Inc. makes several other business programs for Radio Shack Models II, 12, and 16. Other programs of interest include Accounts Payable, Purchase Order, Payroll, Job Costing, Inventory Control, Accounts Receivable, Invoicing, Sales Analysis, and so on.

SERVICE BILLING SYSTEM (CP/M)

This CP/M program is a complete billing package featuring a letter writer that automatically adds the customer's name and address, a calendar system, and a label and envelope generator. Customers are charged three ways: unit billing, automatic billing, and flat rate charges. Five different management reports collect and incorporate statement information. In addition, this program handles taxes, commissions, and credit cards. The disk program sells for \$618.

INSURE: LIFE INSURANCE AGENT MANAGEMENT SYSTEM (Model II)

Designed for a single life insurance agent or agency. The system stores 480 bytes of client information in the Client Master file alone. In addition, separate files maintain information on policies, source of payments and descriptions, paid business, and pending business. Major features of Insure include records accessed in under two seconds, over 900 client history records of almost 40 items per disk, full screen editing, summary reports of income by agent or company, mailing list and labels, and a file for keeping MDRT credits for each agent with credits automatically figured. A demo disk with documentation costs \$25 and can be credited toward the system price of \$250.

ACCOUNTS RECEIVABLE (Model II)

This system handles the receivables of a small- or medium-sized business. It helps management keep a hand on billing, and monitoring incoming funds. Special features of this program include full screen editor; up to 1,000 receivables monitored; file access in under two seconds; sales and payments posted using transaction codes for easy-to-follow audit trails; sales information transferred to inventory; and statements aging reports, transaction journals, and alphabetical account listings printed. A demo disk with documentation costs \$25 and is credited toward the system cost of \$200. You can purchase both the Accounts Receivable and Inventory Management System for \$300.

INVENTORY MANAGEMENT SYSTEM (Model II)

This program provides you with current information concerning sales inventory volume, present purchases, and inventory performance. It stores up to 3,000 inventory items and 900 vendors on disk. Any stock item is accessed in under two seconds. Sales information enters from the screen or from the Accounts Receivable without rekeying. In addition, all vendors and/or stock can be automatically transferred from Radio Shack's IMS without rekeying.

The Next Generation:

SUPERLOG

ADVANCED ELECTRONIC NOTEBOOK
BY KSoft

Over the past two years, LOG Electronic Notebook has quietly been creating a revolution in personal information management. Designed to emulate a familiar pencil and notebook, LOG Electronic Notebook can do for random information what a spreadsheet program does for numbers.

Now, even the best has been improved! KSoft is pleased to announce SUPERLOG, the next generation of the LOG family. SUPERLOG is not a patch! It is a totally rewritten version of the original LOG concept, fully compatible with the LDOS 5.1.3 operating system currently endorsed by Tandy.

SUPERLOG retains all of the versatile features of LOG while adding many new options requested by professional users: Floppy or Hard disk. Any number of LOG files per diskette. 1 to 32767 pages per file. Password protection and error checking. New text editing commands include automatic text Wrap-Around, Expand and Delete for entire lines, a Page Copy command, and an Undo key to reverse editing changes. Cursor motion is more flexible with new key commands plus a Forms simulator. The SEARCH function is greatly enhanced with a Wild-Card character, case-independent search, and multiple word search at 10 pages/second.

Also Note: SUPERLOG is now fully interrupt activated; it may be accessed from practically any foreground task including LDOS Utilities, LBasic, LSCRIPT, EDAS, etc. with non-destructive return to the foreground program. No other information management program is this versatile!

Write or call Today! We'll be glad to tell you about SUPERLOG and what it can do for you!

SUPERLOG Specify Model I or III. \$119.95
LDOS 5.1.3, 48K, and 2 Drives required.

(Model IV version to be offered soon.)

LOG TRSDOS versions, Models I, III still available.

WALL STREET TAP SYSTEM (Models I and III)

Consists of three computer programs: Stockline, an advanced stock appraisal package; The Stock Stalker, a beginner's stock analysis program; and the TAP Communications Package, a terminal package for downloading information from CompuServe.

Stockline provides comparison charts, moving average, on-balance volume, point and figure, and price/volume charts. All for \$149.95. The Stock Stalker, the simpler stock appraiser, is available for \$59.95 and offers comparison charts to spot confirmation signals and relative strength, and price/volume charts to analyze price and volume trends.

The Wall Street TAP sells for \$59.95 alone, and if you order both the Stockline and the TAP together you save 10 dollars and get them for \$199.95.

UNIVAIR INTERNATIONAL
9024 St. Charles Rock Road
St. Louis, MO 63114
314-426-1099

LEGAL TIME AND BILLING SYSTEM (Model II with CP/M)

Designed for attorneys, architects, accountants, administrators, and other professionals who provide services on a time and expense basis. The system contains a full accounts receivable package on clients, and a project management program.

In addition to setting up files for all of the clients and staff members, the system allows definition of a data base containing up to 900 categories of projects, as well as 1,000 service codes for specific types of work performed. These

codes may be defined as either fees or expenses.

Projects or cases are easily entered and can be cross-referenced in several ways. Twenty-six types of reports and statements are generated with this program, including Inter-Office Master Reports, Client Master Activity Reports, Daily Office Production Reports, and Monthly Statements and Forms. The entire package sells for \$950; a demo package costs \$250.

This Legal Time and Billing System is one of 10 business programs manufactured by Univair International. They have Management System programs for Medical, Dental, Insurance, and Real Estate practices. In addition, they make Accounts Receivable/Payable, General Ledger, and Inventory programs.

My wonderful upgrade offer:

**If you bought my accounting software a while back,
it's good news.**

If you didn't, it's a good reason to buy it now.

You're probably growing. My software keeps growing too.

I've tinkered with it right along, improving it constantly. My accounting systems now work for CP/M, TRSDOS and MS/DOS (the IBM PC). It's a natural outgrowth of my support. Talk to a few thousand users on the phone, and you get a few new ideas.

Early on, I resolved that none of my customers would suffer if they bought a system before I improved it. So I've made this offer ever since I started over four years ago:

No matter when you bought, I'll upgrade any of my accounting systems to its latest capability on the same machine for \$25. If you've upgraded your machine, I'll give you a replacement system for either \$25 or the difference between what you paid for your software originally and the price of the new

software. If you've gone from a TRS-80 Model I to a Model II/16 or an IBM PC, say, you get a full credit for whatever you paid me for your Model I systems. Just send me your old disks and I'll send you the new ones.

It's this simple. If you ever buy any of my software, you'll never lose your investment.

I wish the whole world were that simple.

Taranto 70

keyfiles for sorts, modifies data within a file using conditional operations, and prints any size or number of mailing labels. Parts I and II of this system each cost \$99, as does the Model III version.

The Data-Base Manager program is one of 12 business programs that Universal Data Research Inc. makes for the Color Computer. Additional programs include Accounts Receivable/Order Entry, Accounts Payable/Purchase Order, General Ledger System, Report Writer II, Balanced Billing System, Inventory II, Payroll Package, Manufacturer's Inventory, and so on.

VOLKSMICRO COMPUTER SYSTEMS INC.

202 Packets Court, Suite C
Williamsburg, VA 23185
804-220-0005

COMMWHIZ (Models I and III)

A smart-terminal, machine-language program that provides all the features normally needed for interchange with hosts such as Source, CompuServe, Bulletin Board Systems, and other computers. Features of this system include two user-defined messages (up to 40

characters) for Logon and Password or ID; a continuously displayed status line that shows the status of the mode, buffer, printer, autobuf, and communications settings; easy mode changes; default initializations for the most frequently used case; one-key commands; and special characters that include underscore, wave, reverse slash, and brackets.

Also included is TMODEM, a file transfer program for automatic transfers of any file (even if in machine-language programs) between you and others having TMODEM. This package is available on disk for \$79.95. If you don't have a modem, you can purchase their Hayes Smart Modem and Commwhiz for \$299, a savings of \$59.95.

**XYZT COMPUTER
DIMENSIONS INC.**
2 Penn Plaza, Suite 1500
New York, NY 10121
212-244-3100

NEW INTERACTIVE COMPUTING ENVIRONMENT (NICE)

NICE integrates existing packages for microcomputers into one user-friendly system. The whole environ-

ment is multifunctional—it can be used for the development of new application software packages, or for enhancing and customizing existing ones. NICE is comprised of six subsystems, three of which have direct business application. All sell for \$75 each and are compatible with Models I and III. The entire NICE package is available for \$450.

Report Writer supports all kinds of reports, invoices, mailing labels, and customized letters off a data base. Forms can be easily specified and printed out with the necessary computations, totals, subtotals, headers, and trailers.

Database Facility is designed to access records within one second. It has an unlimited number of both files (each file of up to 255 fields of 64 characters each), and keys (every field can be a key). Three levels of key readiness allow fast data entry mode and fast retrieval. It has easy file definition and maintenance, and can be called directly from Basic.

Library Support Option creates libraries for logical organization of your files and programs, saves space, increases speed of operation, and eases file manipulation. Up to 240 files per library, with practically an unlimited number of libraries. ■

Surface Plot

The Grafyx Solution® with Depth

Outstanding Grafyx. SURFACE PLOT lets you broaden your imagination by creating amazing three-dimensional views with Grafyx Solution. Micro-Labs' Grafyx Solution is a plug-in, clip-on board which gives you 98,304 points in a 512 x 192 matrix. That's sixteen times as many points as a standard Model III! Another unique feature is the ability to display the hi-res screen along with the normal text and low-res screen.

Flexible Grafyx. SURFACE PLOT allows you to enter an equation of the form $Z=F(X,Y)$ where Z is the height above the surface for a given X, Y coordinate. For example, entering the equation $Z=10-X^2$ draws a hill. The final picture can be viewed from any position in space so you can see an image from underneath, above, or even inside a hill or valley on the plot surface. You can also specify the size of the resulting image.

Complete Grafyx. The program automatically removes hidden lines for

best results. The documentation contains complete instructions and sample equations so that you will have your computer hard at work without delay. The finished plot can be saved on disk or printed on any of 20 popular printers.

The Grafyx Solution package is shipped from stock and includes the board, 44 programs including an 80-Column display driver and Extended Graphics Basic, and a 54 page manual all for \$299.95. The SURFACE PLOT program, twelve hi-res pictures, and manual is \$39.95. Shipping is FREE on pre-paid or COD orders. (Tx. residents add 5% sales tax.)

INFOSCAN
By The Small Systems Center

NEW ITEM

Infoscan is an information utility that is used to organize, store and retrieve any type of textual information in any format. It combines the features of a word processor, data base manager, and information retrieval and display utility. This complete information system on the screen is the word processing feature and any time you have a word record displayed by 1-17 character key phrase that you specify. Once created, the information lists keyphrases can be viewed as full or on the screen using an interactive keyphrase bracket. You scroll the keyphrases thru the brackets with the arrow keys on your keyboard. When the desired keyphrase is found you press a single key and the corresponding textual record is displayed from disk and displayed on the screen. The record display is in exactly the same format as you would create it. You can even "teach" your own hands to "tell" it.

A clustering view presentation is utilized the display window technique. Menus, keyphrase lists, displayed text and status information are displayed in a series of display windows on your screen. Interactive graphic display points are used to enhance the visual presentation of the product and your information.

POWERDOT
By Powersoft

20% OFF

HI-RES GRAPHICS

A brand new concept, POWERDOT allows you to create hi-resolution screen prints on EPSON (Graftrax & Graftrax+) CITHO PROWRITER printers without any hardware additions or modifications to your TRS-80. You can draw directly on your screen which is a "picture window" of a much larger drawing area and move the window to other areas of the drawing. Your only limitations are imagination and disk space. The completed drawing is dumped to the above printers by reducing and transforming the complete graphics pixels to single hi-res dots. Use the same disk for booting on MOD I or MOD III. Designers, architects, engineers and artists will love this unique drawing program.

POWERMAIL
By Powersoft

SAVE 25%

Powermail is a highly sophisticated mass mailing system designed to run under all of the popular DOS's currently available for the Mod I or Mod III. The program is written entirely in machine language for maximum operation speed and occupies only 4K of the available RAM in your computer. There are no slow periods when Powermail is running. New features have been added to the program that have always been lacking. You now have the ability to keep track of mailings using the 24 "flags" that are incorporated into the Powermail program. The Powermail system will handle a file up to 8 megabytes or 65535 names, whichever is smaller. The program will also sort the entire maximum file size and open up to 168 files simultaneously during the process. Author: Kim Wall
MOD I or MOD III

TALLYMASTER
By Prosoft

ONLY 74.95

TALLYMASTER can help you find out it's the "big picture" financial management tool designed for people responsible for budgets and sales. Revenues and expenses can be placed in up to 100 categories and grouped and totaled into higher categories. Results are displayed immediately and can be printed and stored on disk. TALLYMASTER is easy to learn and easy to use. It's menu driven and the built in HELP command displays information on any of 21 specific topics. Facilities include sorting in four ways, selection of ranges of categories to be changed or repeated, merging of several files and multi column printed reports. Arithmetic functions even allow simple sales projections. TALLYMASTER was designed to fill the gap between a bookkeeper's retained journals and the "CALC" program. It was designed to help the person running a business (or a household) gain better control over the finances of that business.

M-ZAL RELEASE
By Computer 2
Applications Unlimited

SAVE \$20.00

M-ZAL™ the "Modular Z 80" Assembly Language for the TRS 80™. A complete development system for assembly language programmers. M-ZAL is a 96K based package which gives you the ability to easily develop sophisticated machine language programs. On-line TRS 80 and for your TRS 80. The package consists of three programs: TVEOUT™ a full screen general purpose text editor; ASMBLR™ a menu driven Z 80 assembler; and TNNTR™ the object module linker. With them you can create your grandest projects without fear. The module concept makes it easy. It lets you break your programming ideas down into small manageable pieces called modules. You code and assemble each module independently. Then use TNNTR to relocate and link in all the pieces. The result is a complete Z 80 program that's up and running faster because it debugs faster. M-ZAL creates programs in both tape and diskette format and is disk resident. CMD files.

Satellite Word Processing

by Henry Aldrich

If your Model I/III is in heavy demand as a word processor, use Color Computers as satellite terminals and let the I/III do the printing.

Word processing with a Model I/III disk system is popular in my university department. However, the heavy demand for the system makes getting access to it difficult.

The most time-consuming aspect of word processing is typing in the copy. If satellite terminals were available for text preparation, you could prepare copy on a terminal and use a computer to do the printing. I'll describe such a system using a Color Computer as the satellite terminal and a Model I/III as the host computer.

I initially hoped that I could transfer text between the Color Computer and a Model I/III since both write to and read from tape at 1,500 baud. Unfortunately, the Model I/III does not read Color Computer tapes. The two

computers format lead-in and termination information differently, so that reading tapes from one computer by the other doesn't work without changing these parameters.

Machine-language programs could probably be developed to accomplish this; however, my configuration works without special software and requires no hardware modifications. You do, however, have to make simple cable connections.

The System

The satellite word-processing system described here is relatively low-cost. Tandy's 16K Color Computer sells for \$199.95 and a Color Scribes ROM pack costs \$40. Almost any black and white television set serves as a Color

Computer monitor for word processing. See Table 1 for a list of software and hardware requirements.

This system provides the most important features of text formatting except superscripts, subscripts, and underlining. However, these capabilities are available with word-processing software from independent suppliers.

The Color Computer's 16K memory provides storage for about six single-spaced or 12 double-spaced pages. As you near this storage limit, you should store text files in blocks on tape. The amount of memory available is easy to judge since Color Scribes displays it at the bottom of the screen.

It is possible to prepare text on the 16K Color Computer with Color Scribes, then transfer the text across the built-in RS-232C interface to a Model I or III with its own RS-232C interface, disk drives, and a smart terminal program.

Once the Model I/III receives the text, it is stored on disk. Then, with the Model I/III running Scribes or one of its enhancements, the main system loads, chains, and prints the disk files. Underlining and other sophisticated commands are quickly and easily inserted with the global change functions of Model I/III Scribes.

Required Software

Color Scribes, on plug-in ROM pack.
Lindbergh Software's Omniterm or similar smart terminal program for Model I or III.
Scribes for the Model I or III.
Super Color Terminal program from Nelson Software (optional).

Required Hardware

TRS-80 Color Computer and monitor.
TRS-80 Model I or III with RS-232 interface.
Cable to connect RS-232 printer output of Color Computer to RS-232 interface of Model I/III.

Table 1. Required software and hardware.

Cable Construction

Building the cable is straightforward. You'll need a four-wire cable about 6 feet long (phone wire works well), a four-pin DIN plug (for the Color Computer output), and a 40-contact card-edge plug (for the Model I RS-232) or a 25-pin male DB 25 plug (for the Model III RS-232). Radio Shack stores stock all of these components.

The proper cable connections appear in Table 2. Most are obvious, except for the cable connection between the Color Computer's "receive data" line and the Model I/III "data terminal ready" line. This connection satisfies a system requirement of the Color Computer. Its input line must receive a constant signal from the Model I/III indicating that it is ready to receive data. This connection assures an uninterrupted data flow.

Set-up Procedure

Load Omniterm into your Model I/III. Set Omniterm parameters to match the printer default protocols of Color Scriptor. One of Omniterm's nice features is the ease with which you can change these parameters. Simply hit the @ key twice to enter the command mode and change the UART (universal asynchronous receiver-transmitter) settings to:

Baud	600
Data bits	8
Stop bits	2
Parity	None

Then open the input buffer by pressing the I key.

All of the other parameters can remain at default—printer off, screen reformat 54, carriage return suppression off, line feed suppression on, duplex full, echo off, CR/LF grouping off, and output from buffer off. Use the

break key to return to the display mode.

Interconnect the two computers with the appropriate cable as indicated in Table I. If you're using a Model I, the Color Computer must be far enough away from it so the Model I's radio frequency interference doesn't disrupt the Color Computer's display.

Boot up the Color Computer with a Scriptor ROM pack in place. Load your text from tape, or type NEW TEXT. Reformat the line width on the Color Computer to your preference. I use a

"You can use the Color Computer as a portable word processing terminal..."

32-character line width, so lines print as they appear on the screen.

Since Color Scriptor behaves as if it is controlling a printer, the computer transmits a carriage return at the end of each line of text. Failure to reformat the text before sending it to the Model I/III results in 32-character lines with a carriage return at the end of each line. You can remove them in Model I/III Scriptor, but it is tedious. Reformatting prior to transfer avoids the problem. Select the Print option from Color Scriptor's main menu. Then answer the "Printer or tape?" query with "Printer." Begin text transmission to the Model I/III. The color display scrolls as each line is printed.

Alternatively, you could use Nelson Software's Super Color Terminal program. It transfers text in the Color Computer's buffer directly to the Model I/III without carriage return commands at the end of each line, circumventing the problem found with Scriptor.

Save Color Scriptor's text files on tape

in the conventional manner. Then load Super Color Terminal from tape or ROM pack. Use its tape-to-buffer feature to load the Scriptor text file from tape into the buffer. Then, from the main menu, select "LPRINT BUFFER."

When transmission is complete, put your Model I/III into command mode and toggle the input buffer off by typing I. Save the data in the buffer on disk using the standard Omniterm choices from command mode. Return to the Model I/III disk operating system by using Omniterm's X command or by pressing the reset button.

Enter Scriptor in the usual way. Load the text file from disk. Operate normally in Scriptor to edit, print, and so on. If you use the Nelson program, remove the series of carriage returns corresponding to the pagination points on the Color Computer.

Color Scriptor in ROM pack does not display lowercase letters, but uses reverse video capital letters instead. This is surprisingly easy to get used to, however. Some of the cassette word processors, such as Telewriter, do display lowercase, but they require a 32K machine to provide sufficient text storage.

You might want to drive a printer directly with the Color Computer, particularly since many users already have a parallel printer. There are three economical options: first, serial printers, such as the Radio Shack DMP-100, for around \$300 by mail; second, Epson plug-in serial interface card for its parallel printers for less than \$100; finally, independent suppliers' universal serial-to-parallel converter for about \$70.

You can use the Color Computer as a portable word processing terminal, providing you take along a cassette recorder and the universal TV interface cord. Radio Shack sells a sturdy, inexpensive Color Computer vinyl case for transporting the unit. If you connect the Color Computer to a modem and use a smart terminal program such as Nelson Software's Super Color Terminal, it is even possible to transmit manuscripts or data to your home office from field locations or motel rooms. First check with the manager to be sure the alarm won't go off if you disconnect the room's TV cable from the set!

Sophisticated word processing capabilities are within nearly everyone's personal budget using this system, if a Model I or III is available for the final printing operations. ■

INTRODUCING!!!

a FAST, & SOPHISTICATED
and USER FRIENDLY ✓75
graphics and text program

KWIKDRAW

NEW!
from
Lichen
Software

WITH KWIKDRAW YOU CAN QUICKLY AND EASILY CREATE/EDIT DISPLAYS COMBINING GRAPHICS, TEXT, AND SPECIAL CHARACTERS. YOU CAN: • Save/Load displays to/from disk in 3 formats: BASIC/ASCII/object • Save/Load/Overlay displays to/from 10 RAM buffers • Print in a variety of formats, with multiple copy and BACKGROUND printing • 2 cursor sizes, each can move at one of 255 speeds from slow to VERY FAST! • Set delay before keys repeat • Have cursors stop at screen edge or wraparound to opposite edge • Fast line & circle • Move/Duplicate/Erase individual figures and/or text • Fill figures • Reverse black/white • Scroll entire screen with/without wraparound • 2 mirror image routines • View directories • 8 menu/help screens • AND MUCH MORE!!

Logical key assignments are easy to learn. 50+ page manual with instructions for using displays in your programs. What makes it KWIK? Written in 100% machine code — no SLOW BASIC or compiled BASIC! Backups allowed. REQUIRES: 48K Model III* & 1 disk drive. Printing routines require an Epson MX** series printer. TERMS: \$74.95 — cash, certified check, money order, or personal check. Allow 2-3 weeks for personal checks to clear, all other orders will be shipped within 48 hours. LICHEN SOFTWARE, 6603 N. LEE ST. SPOKANE, WA 99207, (509) 448-4026 *Trademark of Tandy Corp. **Trademark of Epson America, Inc.

CRITICAL PATH SCHEDULING

SOFTWARE FOR THE TRS-80
MODEL II

Spacemap

by Hubert Bormann

Contrary to what you're probably thinking, Spacemap isn't the latest Model I arcade clone—it's a track-by-track disk directory.

```

          S P A C E M A P

INSERT TARGET DISKETTE IN DRIVE 0 AND TYPE IN YOUR OPTION :

SHOW FILENAMES FOR
      (U) = VISIBLE USER FILES ONLY
      (S) = SYSTEMS AND INVISIBLE FILES ONLY
      (A) = ALL FILES

      OR      (E) = ENDS THE PROGRAM
  
```

E=EDTASM/CMD

Figure 2. An example of a space map.

Have you ever needed to know where on a disk you have some free space? Or needed to locate a particular file to correct disk errors? I had the same problems and wrote a Model I program that identifies the location of a disk's files in terms of tracks and granules (see Program Listing).

I wrote the program in Assembly language for a 32K or 48K system with at least one disk drive. It occupies three granules on a disk, resides in memory from 7000-8F80 hexadecimal (hex), and works under TRSDOS, NEW-DOS80, and DOSPLUS.

Spacemap in Action

When you boot up the program, a vanity screen first appears on the display while the program does some housekeeping chores.

Then the main menu appears (see Fig. 1). When you select an option, the program displays a space map like the one in Fig. 2. The display includes the name and creation date of the disk, the number of free granules, the number of allocated granules, and the number of granules not available.

It may seem odd that there are some granules unavailable. Spacemap is developed for 40-track disks; if the disk being mapped is formatted for only 35 tracks, the nonexistent tracks (35-39) are denoted under Not Available (see Fig. 3).

Visible User Files Only Options

The Spacemap directory identifies four tracks per line with a total of 10 lines on the display. Each track is subdivided into its two granules, labelled G-1 and G-2.

Figure 2 shows the space map of one of my disks, called Workdisk, after I selected the Visible User Files Only op-

tion. The free granules are indicated by dots. Tracks 38 and 39 are free. Solid lines denote the allocated granules. Only user files are shown with an identifying letter.

System and Invisible Files Only Option

Conversely, system files appear as a solid white line without a letter. For example, the program EDTASM/CMD, coded with the letter E, resides in track 3, granule 2 and all of tracks 4, 5, and 6.

Now look at Fig. 4 where system files on the same disk are identified. Note track 17, where you find both granules identified with the letter D. Below that you see that D stands for Dir/SYS, the disk directory. Granule 1 of track zero is coded with an A, occupied by Boot/SYS. The unidentified solid lines contain the user files identified in Fig. 2.

All Files Option

This option requests identification of all files. No unidentified granules are shown (see Fig. 5).

Additional Details

With the map on the screen, there isn't enough room to display all the file names simultaneously. Underneath the map, on video line 16, is another menu (see Figs. 2-5). Option F, Filespec, displays the file names—they stay on the screen as long as you keep the F key depressed. When you release the key, the space map returns. Another option, H, Hardcopy, produces a printout of both the map and its file names. If you want to map another disk, type N, return to the main menu and read the new directory. If you don't want to read a new directory, type R, bypass the directory-read, and reuse the directory currently in memory. To end the program, type E. See the Program Listing for Spacemap's program flow.

Disk Directory

The disk directory occupies all 10 sectors of track 17. Sector zero contains two tables. The first one is the granule allocation table (GAT), the second one the lockout table. There is a byte in these tables for each possible track, and this byte describes the status of that track. Consider the lockout table first. If, for example, the tenth byte, describing track 9, doesn't equal FC hex, this track is locked out and unusable.

In the granule allocation table, a byte may indicate that both of its granules are free if it is FC hex, or that both granules are allocated if it is FF hex. If the first granule is allocated and

Listing continued

the second one is free, the code is FD hex; if the first granule is free and the second allocated, the code is FE hex. Sector zero also contains the disk name and the date the disk was created. My program does not use some information.

Sector 1, which contains hash codes, is not used either. The last eight sectors, sectors 2-9, each contain eight file directory entries. These are 32 bytes long and describe a file.

There are two types of file directory entries, the primary entry and the extension entry. The primary entry (FPDE) contains in its first byte a code that indicates whether or not the file exists, whether it is a visible or an invisible file, whether it is a systems or non-systems file, and the file protect code. It also indicates that this is a primary directory entry. The entry contains the 8-byte file name, the 3-byte extension (if any), and some end-of-file information. There are also five 2-byte pairs specifying extents.

The first byte is the track number where the file starts, and the second byte indicates whether this file starts with granule 1 or 2 of this track. It also indicates the number of contiguous granules covered. If there aren't enough contiguous granules to store the file, the next 2-byte pair indicates where the file continues. If the entire file is allocated, the first byte of the next 2-byte pair contains FF hex.

If, however, four of these 2-byte pairs are used and more file space is required, then the first byte of the fifth 2-byte pair contains the code FE hex. In this case its second byte points to the location of a File Extension Directory Entry (FXDE). This entry looks very much like a primary entry but is identified as FXDE in byte 1. It also has five 2-byte pairs, specifying more extents. The program prepares the space map using this information.

Now some comments on the program. A look at the flowchart shows that, after the title display, a screen pattern builds in memory. This is the framework for the

THE MICRO COMPUTER BUSINESS WILL GROW FROM \$10 TO \$100 BILLION IN THE NEXT EIGHT YEARS! ARE YOU READY TO CASH IN?

The micro computer business is predicted to grow from its present \$10 billion to \$100 billion before 1990! Imagine the possibilities this opens for you! No matter where you live, if you're starting up or presently in business, no other industry offers you more opportunities!

Now, finally, all the inside information you need to secure a prosperous future in this dynamic industry is available in one place - **THE COMPUTER ENTREPRENEUR MANUAL**! - An immense information source, compiled by our inquisitive research team, aided by a panel of experts and business people from all areas of the computer industry!

We present the inside story of more than 100 lucrative computer businesses you can enter, where you'll find the real opportunities for the eighties: from one man operations like Programming Author, Word Processing Center or Consulting, to Systems House, Service Bureau, Computer Store etc! Many at little or no investment! All the invaluable facts and figures: How to start, Capital needs, Profit estimates and Margins, How to Sell and Market, How missing technical or business experience need not stand in your way, Source of Suppliers, etc! Details that could take years to find out on your own!

We'll show you inside tricks, like how to never again pay retail for computer products and consumer electronics, even for one item - right now, while you're starting your business! How to get free merchandise and trade show invitations, etc. This alone will more than pay for the manual! You'll read actual case histories of other computer entrepreneurs, so you can learn from their mistakes, and profit from their success stories! Where you'll be one year from now depends on your actions today! Let us show you how to take the first crucial steps!

Order now and take advantage of our limited introduction special, **THE COMPUTER ENTREPRENEUR MANUAL**, and a six month subscription to **THE COMPUTER ENTREPRENEUR REPORT/NEWSLETTER** (so you're always up-to-date with the industry), both for only \$29.95! You must be convinced on how easy you can strike it rich in the micro computer business - or you may return the manual for a full refund within thirty days! **USE OUR TOLL FREE NUMBER TO ORDER!**

EVERYTHING YOU NEED TO KNOW TO SUCCEED IN THE COMPUTER BUSINESS IS ALL IN THIS MANUAL!

THE COMPUTER ENTREPRENEUR MANUAL has the answers to all your questions about selecting, starting and successfully running a computer business! There has never been such a comprehensive collection of know-how and information about this business in one place! All the facts you need to plan and achieve your goals in easy-to-follow, step-by-step instructions!

These are some of the 100-plus businesses covered in **PART ONE** of the manual, with the facts on how to start and run, Start-up Cost (Even how to operate on a shoestring), What profits to expect, Wholesale prices, Mark-ups, Suppliers, future outlook, case histories for each, etc:

Systems House, Software Author (who to sell to and who to avoid), Service Bureau, Software Publisher (How to find programs that sell, Word Processing Service, Consulting and Consultant Broker (use your skills or those of others, make \$150 - \$1000 a day!), The Incredible Games Business, Computer Store (Franchises, Pro and Contra, or a low inventory store in your home!), OEM, Hardware Mfg, Data base and Teletext Service (big prospects!), Used Computers, Repairs, Rent-A-Computer, Promote Fests and Trade Shows, Turnkey Systems,

Starting, Mail Order, Compile and rent mailing lists, Specialized Data Hunting and Temp Help Service, Tech Writer Shop, Custom Engineering, The highly profitable Seminars and Training Business, and many more!

Many new ideas and ground floor opportunities! Interviews and success stories on companies of all sizes! Privy info on the profits made: How some computer store operators net \$100 - \$250,000! Little known outfits that made their owners millionaires, one of these low-key companies, making simple boards, went from nil to \$20,000,000 and 100 employees in four years! Programmers that make \$300,000. Thousands of micro millionaires in the making, etc!

Whatever your goal is - Silicon Valley Tycoon, or just a business at home - we guarantee you'll find a business to suit you - or your money back!

PART TWO of the manual is loaded with the know-how and "streetfighting" savvy you need, both as a novice or business veteran, to get started, to stay and to prosper in the micro computer business! A goldmine of information in clear and easy-to-use instructions. How to prepare your Business Plan, Outside financing, The mistakes you must avoid, How to hire and manage employees, Incorporation (when, and how to do it cheaply), Surviving bad times, Record Keeping, how to estimate your market before you start, Use multiple locations to maximize profits, how to promote and stay steps ahead of the competition! How to get free advertising, free merchandise, free advice, Power negotiating with suppliers to double your profit margins, etc! Even how to keep a present job while starting a business part time!

Don't miss this opportunity to be part of this great industry - the next success story could be your own! Order the manual today! Part one and two, bound in a deluxe ring binder, where you can also collect our newsletter (free for six months with the manual - a \$32.50 value!) - all for only \$29.95!

THE COMPUTER ENTREPRENEUR NEWSLETTER - ALL THE LATEST INSIDE BUSINESS NEWS! NOW! SIX MONTHS FREE WITH YOUR MANUAL!

You're always attuned to the industry, and your manual kept up-to-date, with our newsletter! Each issue has the latest business news, ideas, new suppliers, our indispensable "watchdog" column on profits, discounts (don't miss mfg's promos, like recently, when top video monitor sold at \$80 - that's half wholesale, one third of the retail price!), the competition, the big deals, etc! Feature stories with start-up info and case histories on new micro businesses!

You'll get invitations to trade shows and conventions, the usage of our advisory service and our discount buying service for your purchases!

You'll find many items in our newsletter that will save you the cost of your manual many times over!

map and, once built, is used for all maps. After the directory is read or ignored, depending on the read switch setting, a granule table is built in memory. This table is 80 bytes long, each byte representing one granule for a 40-track disk. The table is filled with 50 hex, 51 hex, or 52 hex, depending on the information found in the GAT and lockout table.

After this table is complete, the program checks sectors 2-9 for files, keyed to the map by name. The files checked depend on the option taken earlier when you answered the query for file names. A file code counter is started and incremented for each file you use. This code is then inserted into the granule table in the granules where the file resides. Later, this code converts to the more convenient A-Z, 1-9, 10 and up configuration for display purposes. The file name area is built showing these codes and their associated file names.

After a check of sectors 2-9 is complete, the now-updated granule table is decoded and a screen display pattern is built. The display pattern then moves to the screen memory. Pressing the F key replaces it with the keyed file names. When you release F, the display pattern moves back to video. This happens very quickly. You get a printout by sending data bytes to the printer ROM routine from the map area, followed by the file name area. In order to center the output, eight blanks precede each line. Find more detailed comments in the program listing.

A careful look at the map shows whether a file is badly fragmented or not. Fragmentation depends upon the number of contiguous granules available to the system when a file is saved. Single-drive owners see how many systems files have to be carried on each disk.

Spacemap is handy, especially when mapping disks with different operating systems, or data disks without the systems programs. The program produces a map as long as the directory criteria are the same.

Modifications

I own the Microline-80 printer, and the CR/LF code for is 0A hex. If your printer requires a different code, change line 8110 in the Program Listing. If your printer doesn't print block graphics, make the changes listed in Fig. 6; they should produce acceptable graphics. ■

ACCEL

3/4

Compiler for TRS-80
Basic, Model I/III

\$99.95

+ \$2 Shipping CA add 6%

**Extra-
Compatible**

ACCEL3/4 will
handle the whole
Basic language,
and more.

Even non-standard
Basic extensions
don't debar
compilation.
E.g., the 20 new
Basic keywords
established by
ENB (Southern
Software's
new relational
dbms).

Includes ACCEL3
(5.5K, all DOS)
AND ACCEL4
(TRSDOS/LDOS
overlay version).

FC/CMD

Use FC instead of DIR for a full-screen display of drive-directories, ordered as you choose. Point the floating cursor and execute shorthand commands against any file on any drive.

- Shows up to eight drive-directories
- Many column orderings available.
- Easy-to-learn shorthand scheme saves 90% of the typing.
- Many built-in DOS commands, supports user-added commands.
- Relocatable, works with DOSPLUS, LDOS, NEWDOS80, TRSDOS.
- A must for multi-drive systems, gives far better visibility, saves time and typing, brings order to your files.

EDIT

**Full-Screen Editor for
TRS-80 Basic, Mod I/III**

You need better-than-wordprocessor control when you write and edit BASIC programs. That's why EDIT has lots of better-than-wordprocessor features.

- Full-floating cursor with autorepeat (including function keys).
- Navigation by cursor-controlled scrolling, by line number or by program content.
- Overtyping, Delete or Insert characters of text (including line numbers).
- Join or Split lines. Copy, Delete, Insert, Move, Position or Replicate lines.
- Copy, Delete, Move, Position or Replicate blocks of lines.
- Find and/or Replace occurrences of strings.
- Over 30 commands and functions, supports lower-case.
- 3.3K, relocatable (all DOS), also includes TRSDOS, LDOS overlay version.

\$40

**You owe it to
your programming.**

Enter Another Dimension

The world of 3D.

You'll find it in **80 MICRO's** Anniversary Issue: true stereoscopic three-dimensional Color Computer* graphics, with your own complimentary pair of 3D glasses bound right into the magazine. This is the biggest **80 MICRO** we've ever published, 600 pages loaded with the kind of programs and information you need:

- stereoscopic 3D Color Computer graphics programs
- how to shop for a printer
- 3-year **80 MICRO** index, annotated and cross-referenced
- CoBOL tutorial for beginners
- a list of over 200 user's groups
- Model II utilities and applications programs
- Bill Barden's introduction to Assembly Language
- NODOS 80—disk utilities for cassette users

And it's yours for only \$5.95. Order your Anniversary Issue today. Use the attached order form, the coupon below, or call toll free

1-800-258-5473

and use your MasterCard, Visa or American Express.

Experience the 3rd Dimension.

Order your **80 MICRO** Anniversary Issue today.

*TRS-80 Color Computer & TRS-80 are trademarks of Radio Shack, a division of Tandy Corp.

You can also get the Special Edition Load 80 Companion to the Anniversary Issue: dozens of programs on easy-to-load cassette or disk. Save hours of keyboarding. The Anniversary Issue Load 80 cassette is just \$9.95; the disk, \$19.95. Programs included run only on the TRS-80* Model I and Model III computers.

WOBOS™ I

WINTERTIME OPERATIONS

Basic Operating System

WOBOS I is a menu driven, prestructured program in BASIC that provides access to over 30 utility functions during development or actual use of a program. Its unique layout allows you to develop your programs within a well organized environment that provides a very strong foundation to build upon. You always had to start from scratch before out now, after loading WOBOS I, you'll start with over 11K of subroutines and system utilities. Imagine what this can do for your productivity! WOBOS I is not an accessory to your program. It actually becomes its foundation!

Illustrated above is the Primary Menu of WOBOS I for Model III. In addition to the features shown, the DEVICE I/O generates a separate 9-choice menu that will allow you to compile, update, sort and output your data files. It also includes a utility that will save both the DATA and WOBOS I on tape and/or disk.

With controllable SOUND!

"Once you've used it, you'll never write another program without it!"

The LDOS Toolbox

by Jim Heid

The utilities to perfect LDOS are available in Powersoft's Toolbox. You'll also get patches and filters to make your system manageable.

★★★★

The Toolbox for LDOS
Powersoft
11500 Stemmons Fwy.
Suite 125
Dallas, TX 75229
Models I and III
One disk drive, LDOS
\$69.95

Finally, a set of tools I can use without busting my knuckles! The Toolbox for LDOS is a set of utility programs, patches, and filters that makes the best TRS-80 disk operating system even better.

What's a Utility?

A utility is a program that makes using the computer easier. Some utilities add features your computer lacks, such as a different keyboard arrangement. Some work with your word processing program to improve your text.

Others make life easier for disk drive owners by simplifying certain disk operating system (DOS) commands and functions. And some come to the rescue to repair a disk when that vital file won't load.

The Toolbox does all the above and more (see Table 1). Kim Watt, the author of Super Utility Plus, wrote it. The programs in The Toolbox do many things that Super Utility Plus (SU+) does, but they work with LDOS-for-

matted disks only.

They also work with double-sided disk drives and with hard disks, something even SU+ can't do. In fact, this package lets you work with all LDOS-supported disk drives, including single- or double-density, single- or double-sided, 5¼- or 8-inch floppy disk drives, and fixed or removable hard disk drives.

The Package

The Toolbox package contains 19 machine-language programs, two LDOS filter programs, one LDOS patch, and two sample files, all stored on two 5¼-inch disks and accompanied by a 6- by 9-inch, 51-page manual.

You cannot duplicate the disks, but they contain an easy-to-use copy program that transfers The Toolbox programs onto your own single-density disks. Once you transfer them, you can copy them as often as you want.

The Toolbox utilities are written for use with LDOS 5.1.3. Model I users can use them without modification on any LDOS 5.1.x release. Model III users must patch 15 of the programs; the patches are easy to apply and are listed in the front of the manual. You cannot use the programs with the LDOS 5.0.x series.

The Programs

PMOD lets you examine and modify the contents of memory or of a disk. You can browse through the contents of

a disk using the arrow keys, or supply a file name to modify or examine the contents of a particular file without searching the entire disk.

You can type your modifications in hexadecimal (hex), ASCII, decimal, binary, or octal. A sample PMOD screen appears in Fig. 1.

PCHECK is a directory-checking utility. The directory is a disk's table of contents. It contains the information that tells LDOS where your files are located on the disk, how much free space is available, when you last updated a file, and so on.

PCHECK reads a disk's directory and performs a complex, three-stage test to ensure that the directory's information is accurate. It's capable of finding 16 possible error conditions (see Fig. 2).

The error messages are definitely not phrased for the novice, but this makes sense, since the directory is a complex place that novices don't usually access anyway. How could you phrase "Directory links to record not linking back to it" for the novice?

PFIX is the companion program to PCHECK. It fixes most directory errors that PCHECK finds, and also repairs a disk that no longer boots.

The instructions for PFIX state, "In conjunction with PCHECK, most directory problems can be easily located and corrected without extensive knowledge of how directories are formatted."

To test this claim, I set up a test disk and, using PMOD, introduced five errors in the disk's directory. I then checked the disk using PCHECK. It found all the errors, and reported them as shown in Fig. 3.

Next, I ran PFIX to repair the GAT table. (You don't need to know what these letters stand for to use the pro-

Give us a call and it's on its way.

Our inventory is so huge, we've probably got just what you want in stock. We'll ship it out right now. At the right price.

grams; you simply tell PFIx what PCHECK told you when it tested the disk, and it does the rest.) The disk drive came on for a few seconds, and a message told me that the fix was completed. I ran PCHECK to make sure. PFIx had located and repaired all the errors.

If you have a disk formatted a few years ago that is victim to frequent "SECTOR NOT FOUND" or CRC errors, the magnetic charges in the disk's surface might be weakened. PREFORM, a utility that formats a disk without erasing the data on it, can help.

PREFORM reads a track, reformats the track, then rewrites the data that it read. I used it to refresh several older disks, and it works well. PREFORM does not work with hard disk drives.

PVU is a disk-verification utility. It reads a disk and informs you of any faulty sectors. You can specify the drive to be tested, the track number to start testing, and a pause at each bad sector.

PCLEAR erases all unassigned granules, any part of the disk that a file isn't using. It also erases the contents of a particular file and cleans up a disk's directory by clearing unused directory records.

Using PCLEAR, you can wipe out every trace of that confidential memo. Better yet, you can replace the confidential data with the string of your choice.

Assume you have a file called Secret/SCR. At the LDOS READY prompt, type PCLEAR, SECRET/SCR, "HA! FOOLED YOU!". The phrase HA! FOOLED YOU!, repeating over and over again, replaces the data in the file. It's a fine way to foil file foes.

PSS is a sector status utility. It lets you identify which file is assigned to any sector on a disk. You simply supply PSS with the drive, track, and sector numbers, and it determines whether that sector is assigned to any file. If the sector is in use, PSS tells you the file name that it is assigned to, and the relative sector number within that file.

PMAP lets you locate the sectors that make up a particular file and determine the status of all granules on a disk. You can print the report that the program displays.

The PASSGO utility is handy when you forget a password. It lets you remove a password from a single file or an entire disk. You can also specify that passwords be removed on invisible and system files.

PUN is a disk un-repair program. It reverses the effect of the LDOS Repair

Type of System—utility package for LDOS users
Machine-language command files, one LDOS patch
Utility programs are parameter driven
Help screens provide on-line description of parameters
Package supplied on two single-density disks, each containing a copy program for transferring the files

Summary of Programs

PMOD—disk editing utility that allows examination and modification of disks.
PCHECK—directory check utility that reads directory and reports any errors.
PFIx—directory repair utility that repairs errors found by PCHECK.
PREFORM—disk reformat utility that formats a disk without erasing its data.
PVU—disk verification utility that finds and reports faulty disk sectors.
PCLEAR—disk clean-up utility that clears directory entries for killed files and clears unassigned granules.
PSS—sector status utility that identifies which file is assigned to any sector.
PMAP—disk/file mapping utility that locates sectors comprising a file and determines the status of all granules on a disk.
PASSGO—password removal utility that removes passwords from a single file or all files on a disk.
PUN—disk unrepair program that reverses effect of LDOS repair (alien) command.
PKILL—file killing utility that permits killing of multiple files with a minimum of typing.
PCOMPARE—disk/file comparison utility that compares two disks or files and identifies differences between them.
PFIND—search and replace utility that finds a given string or byte value and optionally replaces it.
PMOVE—file copying utility that transfers multiple files.
PERASE—disk bulk-erase utility that removes all traces of data from a disk.
PDIRT—directory read utility that permits reading of a Model III TRSDOS disk directory without leaving LDOS.
PEX—disk drive exercising utility that steps head in and out.
PHELP—LDOS help utility that contains descriptions for all LDOS library commands and some utilities.
PMX/FLT—filter for printing TRS-80 graphics on Epson MX-80 printer.
DVORAK/FLT—filter that converts the keyboard layout to Dvorak arrangement.
PFILT/FLT—user definable filter that filters input or output devices.
PBOOT/FLT—patch for customizing LDOS boot display.

(alien) command, which makes Model I TRSDOS disks readable by Model III LDOS.

PUN changes the data address marks on a repaired disk, so Model I TRSDOS can read the repaired disk. One trip through Punland, and LDOS and TRSDOS can read your disk. PUN works on the Model I only.

PKILL is a utility that lets you kill a number of files quickly with a minimum of typing. PKILL lets you classify the files to be killed according to various categories. For example, the command PKILL :1,/CMD kills all files on the disk in drive I with the /CMD extension. The command PKILL :1,A kills all files on the drive I disk.

Put 64K CP/M® 2.2 in your TRS-80 Model III and tap into 2,000 business programs.

Now you can run programs such as WordStar, dBASE II, SuperCalc, MailMerge and virtually thousands of other CP/M-based programs on your TRS-80 Model III.

CP/M 2.2 is the industry standard operating system that gives you access right now to over 2,000 off-the-shelf business programs.

Our plug-in Shuffleboard III comes with 16K of RAM, giving your Model III the power of full 64K CP/M 2.2 without interference of the ROM or video memory. In fact, the Shuffleboard will appear transparent in the TRS-80 mode and will not interfere with any DOS operation.

READ and WRITE Osborne, Xerox and IBM personal computer software plus many more popular formats.

Unfortunately, there is no standardized CP/M format for 5¼" diskettes. But we have developed a way to READ/WRITE and RUN standard programs under the following single-sided formats: Osborne 1 S/D, Xerox 820 S/D, IBM PC* D/D for CP/M 86 only, Superbrain D/D, Kapro II D/D, HP 125 D/D and TeleVideo D/D.

*Will Read and Write Only.

Easy plug-in installation.

It's so simple. The Shuffleboard III plugs into two existing sockets inside your Model III. There are no permanent modifications, no cut traces and no soldering. You'll be up and running in minutes.

New Products.

80 x 24 VIDEO BOARD: Features dual intensity screen, programmable cursor control for block, underline & blink rate, on-board bell with audible keyclick, battery-operated real time calendar/clock, full ASCII character set plus 256 special character graphics, dual RS-232 outputs and composite video output.

FLOPPY DISK CONTROLLER: Now you can access 5¼" and 8" floppy disk drives in any combination up to 4 drives of S/D density, S/D sided. Tap into a wealth of CP/M software which comes on 8" IBM 3740 format or Pickles & Trout CP/M for the Model II.

SOFTWARE: Additional CP/M software programs are available. Call or write for details.

OEM and DEALER inquiries invited.

Introductory price of

\$299.

The Shuffleboard III comes fully burned-in and tested complete with 64K CP/M 2.2 and MBASIC 80 interpreter, plus software manuals and a first class user's manual — with a 1-year limited warranty and 15-day no-risk free trial — for only \$299.

See the Shuffleboard III at your dealer's now.

Once you see what the Shuffleboard can do for your Model III you'll want one at once. If your dealer does not yet stock the Shuffleboard have him give us a call. Or send check, money order, VISA or MASTERCARD number (sorry, no COD's) plus \$5 shipping per board (\$17 outside the USA & Canada)* directly to the address below. Cal. residents please add sales tax. Credit card purchases can be phoned in directly and we'll ship from stock.

SERIAL PORT EXPANDER AND MORE

BTA's MODEL 524 MULTI-PORT CONTROLLER is a cable activated one to four serial port expander — but that's not all since it has separate and independent UARTS, buffers and handshaking each port can operate with a different configuration, i.e. different baud rates, stop bits, etc. These features also permit two or more devices to communicate with the 524 simultaneously.

Full duplex with EIA RS-232 protocol

Baud rates up to 19,200

Expansion to 16 ports by cascading

Peripheral ports may be configured by user software

One year warranty

- **MODEL 524** \$249.00
- **MODEL 524A** \$279.00
same as model 524 except has 256 byte rx/tx buffers per port
- **MODEL 524 D** \$269.00
same as model 524, plus continuous polling of each peripheral device for data transfer requests. The device is automatically connected when its turn comes up. ON, BUSY and OFF messages are sent to the peripheral device.
- Other models available — Contact us or your dealer for additional information.

NEW FEATURES

- ### Field Manager - Change, Delete, Add, or Modify Fields ANY time.
- ### DATAMORD Text Writer - Merge Data Files with Form Letters, etc.
- ### Label Maker - Any Size. Merge from Data base or stand alone.
- ### Supports LEGAL Size Documents - Any Paper Width to 15 Inches.

OTHER FEATURES

- Auto Report Generator
- Auto Totals & Subtotals
- Multiple Drives Supported
- Menu Driven, User Friendly
- Multiple Files on One Disk
- State Model I or III, 48K Required
- Auto Screen Forest
- Auto Column Averaging
- Sorts in Minutes, Not Hours
- No Programming
- Unlimited Backups

Adding an exclamation mark to a PKILL command causes the utility to zero the directory entry for each file killed, making it impossible to recover those files. PKILL also lets you use partspecs (part of a file name) when specifying file names. For example, the command PKILL :1,\$TEST kills all files from the drive 1 disk with names that begin with TEST.

PKILL's best feature is its speed. The program operates by reading a disk's directory into memory, killing whatever files you specify, then writing the newly modified directory back to the disk. This technique lets PKILL perform a complex file-killing procedure in little more than the time it takes to read and write a directory.

PKILL's flexible parameters and its speed make it a must-have for hard disk users. One or two passes through PKILL can take the place of a 10-minute disk clean-up session.

PCOMPARE is the disk or file comparison utility. Supply two file names or two drive numbers containing disks to be compared, and PCOMPARE "holds them up to the light, side-by-side" and tells you if the data on them is the same or different. If it's different, PCOMPARE tells you the position of the mismatch within the file or disk.

The program displays a summary at the end of the comparison that gives the number of sectors compared, the number of sectors not matching, and the number of bytes not matching.

The PFIND utility is a string search-and-replace program. It lets you locate and, if desired, replace strings in memory, within a single file, or on a disk-wide basis. You can supply the search string in one of four formats: case dependent (each specified letter must match exactly), case independent (specified letters can be in upper- or lowercase, or a mixture of both), in byte-list format, or in word-list format.

The last two formats let you search for a string of bytes or of 2-byte words. The program accepts byte or word values in binary, decimal, hex, or octal.

PMOVE is the ultimate file copier. It lets you transfer a number of files from one disk to another in one easy operation. PMOVE also lets you supply default file extensions.

Transferring files with PMOVE is much faster than with the LDOS Copy command. In my tests, performed on an unmodified Model III, transferring 10 small files (of fewer than three grans each) took three minutes using the LDOS Copy command, but only one minute and 30 seconds using PMOVE.

1. Cylinder xxx has an invalid GAT table byte
2. Hit byte at xxH invalid or extraneous
3. Filename contains non-ASCII characters
4. End of File Sector beyond allocated sectors
5. No terminator for extent field
6. Directory links to record not linking back to it
7. Track assigned that is beyond diskette boundary
8. Extension assigned before end of extents
9. Forward link to inactive entry
10. Forward link to non-extension entry
11. Extension record not assigned to any files
12. Multiple files assigned to single granule
13. Directory record has invalid HIT byte
14. Directory record has a zero HIT byte
15. Extended directory record has invalid HIT byte
16. Extended directory record has a zero HIT byte

This is another utility no hard disk owner should be without.

The PERASE utility turns your computer into a \$15 bulk eraser. It erases all data on a disk. A bulk eraser does the same thing as PERASE but faster, but bulk erasers sometimes extend their magnetic fields to include important disks located several feet away. PERASE only erases the disk you specify.

PDIRT lets you read Model III TRSDOS-formatted disks without leaving LDOS. You can specify that the directory listing include invisible files, system files, and system overlays. This utility does not work on a Model I that you haven't modified for double-density operation.

The PEX utility is a disk drive exerciser. It doesn't take your drives out for a walk on cold winter days, but it does give their stepper motors a workout. In its manual mode, PEX lets you position the head to a specified track. You can use this feature when aligning a drive.

In its automatic mode, PEX steps the head back and forth from track zero to the drive's highest-numbered track.

You can use PEX along with a head-cleaning disk, although The Toolbox documentation advises against using the automatic mode for more than 15-30 seconds.

PHHELP, the largest program in The Toolbox, provides a summary of each LDOS library command and of the LBasic, Format, Backup, Conv, Patch, and Repair programs.

To use PHHELP, type PHHELP followed by a space, then the name of the library command. A short description of the command's purpose, use, and parameters appears and the program returns to the LDOS Ready prompt.

The descriptions in PHHELP are clearly written, and most summarize the command as well as possible in one screen.

Some LDOS commands, such as System, DIR, and ATTRIB have many parameters and are too complex to describe completely on one screen. The summaries for these commands are more useful as memory joggers than as replacements for the LDOS manual.

Filters and a Fix

One of the features that sets LDOS

apart from other disk operating systems is its ability to filter a device. A device is anything attached to the computer that sends or receives data to or from the computer. Printers, disk drives, video monitors, and keyboards are typical devices.

The keyboard is an input device, since it supplies information to the computer. The video monitor and the printer are output devices, since they display and print information sent from the computer. The disk drive is an input or an output device, since it either supplies stored information to the computer or saves information sent by it.

LDOS lets you intercept and change the data going to or coming from a device. You might, for example, filter the printer to change the number of characters printed on each line.

You could also filter the keyboard so that entire sentences appear when you press a certain key. Filtering is a powerful feature you can use to overcome software or hardware limitations, or to make your computer easier to operate.

Three filters are included in The Toolbox package. The first, PMX/FLT, is for Epson MX-80 printer users. This filter adjusts the MX-80 graphics characters so that they print as normal

TRS-80 graphic characters. This lets you retain the special capabilities of the MX-80 that are otherwise lost when you put it in the TRS-80 mode.

Dvorak/FLT is a keyboard filter that lets you try the famous Dvorak simplified keyboard arrangement. This keyboard layout places frequently used keys in more logical positions than the standard QWERTY layout. Once

"Filtering is a powerful feature you can use to overcome software or hardware limitations."

installed, you can alternate between Dvorak and QWERTY by holding down the clear key and pressing the zero key.

This filter does work, although I didn't spend much time experimenting with the Dvorak layout. I had a hard enough time learning where the space bar is; I'm not about to learn to type all

over again.

PFILT is a powerful filter you customize for your own applications. Unlike filters designed for a specific device, you can use PFILT with either input or output devices.

To use it, you must first create a translation file using the LDOS Build command, or any word processor that saves files in ASCII format. This file contains the information that tells PFILT what to do with the data it intercepts.

I put together a short filter file that I use to filter the output to my dot-matrix printer. This file lets me change type styles in the middle of text by simply pressing two keys.

Two sample filter files in The Toolbox illustrate the power of the PFILT filter. These files, called Code and Decode, are used to scramble and unscramble whatever you type when they are active. They're not of much practical value, but they help you figure out how to use PFILT for your own applications.

PBOOT is a patch that lets you customize, to a small degree, the appearance of the LDOS boot screen. PBOOT lets you add three 22-character message lines displayed next to that big

The Automatic Ribbon Re-Inker

Re-ink any type of ribbon (except carbon) for less than 5 cents.

Extremely simple operation. 1) Load cartridge or spool. 2) Add ink to reservoir. 3) Start motor.

We have a MAC INKER for any printer—many MAC INKER units support multiple printers. Ink contains lubricant for safe dot matrix printhead operation. Multicolored inks available. Ask for brochure.

LDOS that appears when you boot the system.

I found this patch a convenient way to mark my system disks. I have several LDOS system disks that I use, depending on what I'm doing—one for programming, one for word processing, one for telecommunications, and so on.

PBOOT lets me put a small message in each disk's boot screen. The message appears every time I reset the system, reminding me which system disk I'm using.

Using the Programs

All the programs in The Toolbox are parameter-driven, meaning that you have to type words and values to tell each program what to do, as opposed to selecting options from a menu. Parameter-driven programs are generally more difficult to learn because you have to either memorize each parameter or refer to the manual often.

Powersoft has, however, worked around this drawback. When a program runs, the screen clears, and the program's name, a copyright message, and a prompt for the parameters appears. If you press enter, you get a list of allowable parameters.

You can see this list any time during a

program's execution by pressing the enter key in response to the prompt. Although I still prefer menu-driven programs like Super Utility Plus, this method of providing on-line help works well.

All the programs in The Toolbox operate the same way—beautifully. The programs are carefully error-trapped. The screen displays are consistent and readable, and the error messages, while sometimes very technical, are complete. As an added touch, you can instruct the programs that display reports—disk maps, directory checks, and so on—to send data to the printer as well as to the screen.

Documentation

The manual that accompanies The Toolbox is adequate if you are very familiar with LDOS and with disk terminology in general. It was not written with the novice in mind. It assumes that you know what HIT and GAT mean, and what sectors and data address marks mean.

It doesn't warn the inexperienced computer user that one or two mistakes with a disk modification utility like PMOD can destroy the disk's contents. Finally, the manual is one of those run-it-off-right-justified-on-the-

daisy-wheel-printer-and-reduce-everything-50-percent jobs, and is, therefore, unattractive and difficult to read.

Who's It For?

This toolbox is definitely the craftsman's tool set. The programs in The Toolbox are error-free and work well with LDOS. They are powerful and easy to use, but you must have some knowledge of LDOS and of disk technical terminology, because the manual is geared for the expert user.

If you don't have any experience with disk and memory modification utilities, read one of the many books on the subject and experiment on some unimportant disks before working with valuable ones.

The file-moving and killing utilities are real time-savers. If you have a hard disk drive or several floppy disk drives, these gems are worth the cost of the package in themselves. In fact, at the new price of \$69.95 (these same programs used to sell for \$149.95), The Toolbox should be part of every LDOS user's system. ■

The Artful Plotter

by Jerry O'Dell

Plot intricate, eye-catching figures on Radio Shack's plotter/printer. Programs like these convert even amateurs into artists.

Figure 1. Classic rose curves.

When Radio Shack reduced the price of their plotter/printer (catalog number 26-1190A), I had to buy one. This digital plotter produces 8½- by 11-inch plots with a resolution superior to even the large, \$35,000 plotters of my college days. I've written some programs for the plotter that show off its high-resolution graphics in figures that are attractive and unique.

The plotter uses a ballpoint pen and thus isn't capable of doing work in India ink; that is not an insuperable drawback.

While I purchased the plotter for scientific purposes, I couldn't resist trying to make some intricate drawings. Since the manual provides only a few pro-

grams, I had to write my own. Some of the drawings were fascinating—almost beautiful. With proper modifications, these programs support almost any plotter; none of the features used are unique to my plotter.

The Programs

I consulted analytic geometry texts to learn how to create these figures. These books contain formulas for certain classic curves, such as those in the rose in Fig. 1. Many of these famous curves are defined in terms of polar coordinates. As such, they are difficult to draw on a printer, but are easily drawn on a plotter.

Plotters have a limited set of commands. Indeed, the programs in this article use only four true plotter commands found on virtually all plotters. In Program Listing 1, lines 20-50 establish certain constants for the rose. If you like, vary A to change the size and N to change the number of petals on the rose. The plotter connects to the computer's printer output and is addressed through LPRINT statements.

Line 60 puts the plotter in plotting mode, with LPRINT CHR\$(2). Line 70 is important. It reads:

```
70 LPRINT "G50X950Y0"
'MOVE TO NEW ORIGIN
```

This line moves the plotter pen to the

Amdek your guide to innovative computing!

4-10

coordinates $X=950$, $Y=0$ with the pen up. Thus, a G50 command moves the pen without drawing a line. Line 80 reads:

```
80 LPRINT "G03X0Y0"
'SET NEW ORIGIN
```

It resets the pen's origin to the current position (here, $X=950$, $Y=0$). From this point on, all pen movements are compared (referred) to $X=950$, $Y=0$. The phrase G03X0Y0 instructs the plotter to use the current position as a new origin.

The remainder of the program, particularly lines 130-140, contains a complicated formula to draw the rose. Plotting takes place in line 150, which reads:

```
150 LPRINT "G01X";INT(X); "Y";INT(Y)
'PLOT SEGMENT
```

Statements like G01X50Y60 move the pen holder with the pen down, drawing a line from the present pen position to coordinates $X=50$, $Y=60$. Line 150 says the same sort of thing, but variables X and Y go into the print statement as they are calculated by the formulas. Thus, the first time you encounter line 150 the plotter draws a short line from the origin (where you last left the pen) to the first point on the curve. The second time you encounter line 150, the plotter extends the line segment of the curve. Notice that Fig. 1, then, is made up entirely of many short, straight lines.

You should have little trouble converting these programs so they work on your machine. In fact, the little \$250 plotter that Radio Shack has just begun to sell seems ideal for the amateur.

Listing 1 also shows the method used to draw the figures. The rose is actually drawn in lines 110-160, but since a sin-

gle rose isn't very interesting to the eye, I added the loop in lines 90 and 170 to

Figure 2. An epicycloid.

make the plotter draw several roses of ever increasing size. You can produce completely different figures by changing the numbers in lines 20, 30, and 100.

If the plot is a bit coarse for you, make the step smaller in line 110. Or, make the steps larger for fascinating, odd, angular figures, completely unlike the original.

I decided to plot an epicycloid, a curve traced by a point on a circle that rolls on the outside of a fixed circle (see Fig. 2). The epicycloid program is similar to the first program (see Program Listing 2).

Since it's used more than once, the function for the epicycloid is moved to a subroutine at line 200. This program introduces a new complication: While the rose began at the origin, the epicycloid begins at a distance from the origin. Consequently, in lines 110 and 120 you

**LOGICAL
SYSTEMS
INC.**

13 TIMES FASTER THAN dBASE II™

If you bought your computer to save time, then you need SUPER, the most powerful database system you can use. Power is a combination of speed, ease of use and versatility. SUPER has them all.

FAST – To demonstrate SUPER's speed, ISA retained a professional dBASE programmer to benchmark SUPER vs. the acknowledged leader. A simple mailing list application was chosen to minimize dBASE programming cost. The results:

Task	SUPER Time	dBASE II Time
Set up/Program	5:20 min.	12:18:00 hrs.
Input 100 records	50:29 min.	1:27:50 hrs.
Sort & Print Labels	6:41 min.	4:18 min.
Totals	1:02:30 hrs.	13:50:08 hrs.

Notice that SUPER was faster at every task where *your time* is involved—and saving your time is probably the whole reason you bought a computer.

EASY TO USE – SUPER won because of its ease of use. Since it is menu-driven, office personnel can easily learn to use SUPER to set up their own applications, speeding and simplifying dozens of tasks without the need of programmer support.

VERSATILE – SUPER, unlike other business programs, doesn't dictate how to run your business. With SUPER the computer does what *you* want, when *you* want, the way *you* want it. *SUPER may be the only business program you'll ever need.* It can handle customer files, payables, receivables, depreciation, appointments, cost accounting, time charges, commissions, inventory, manufacturing control, and even matrix accounting systems!

SUPER PERFORMANCE AT A SUPER PRICE -

That SUPER beats the \$700 dBASE program may surprise you, but in terms of price vs. performance SUPER has no competitors. Among its features are: production input, data compression, multiple databases on line, transaction posting, file reformatting, stored arithmetic files, flexible report formats, hierarchical sort and multi-disk files for up to 131,068 records. It can select by ranges, sub-strings, and field comparisons. It interfaces to word processors such as WordStar™, SuperSCRIPTSIT™, Model II/16 SCRIPTSIT™, and NEWSRIPT™. In fact SUPER has so many features that

it takes a six-page product description to cover them all. Write or call and we'll send you one.

SUPER is available for TRS-80™ Models I & III under NEWDOS™, LDOS™, and DOSPLUS; for TRS-80 Models II, III and 16 under TRSDOS™; and CP/M™ systems.

Figure 3. A hypocycloid.

must move the pen to the start of the figure or you'll have an ugly, unwanted line from the origin to the beginning of the curve. The remainder of the program is just like Listing 1; change the shape of the figure by changing the numbers in lines 20, 30, 90, and 130.

Sometimes small modifications in the formulas lead to significant changes in appearance (see Program Listing 3). By changing the values in line 20 to 100, and in line 90 to 15, and changing the step size in line 130 to 0.5, the plus sign in line 210 to a minus sign, and the minus

"Sometimes small modifications in the formulas lead to significant changes in appearance. . . . These figures remind one of a spider's web."

sign in line 220 to a plus, you obtain the hypocycloid shown in Fig. 3.

A hypocycloid is drawn by a point on a circle rolling around the inside of a larger circle. These figures remind one of a spider's web.

Sometimes, even erroneous formulas of geometric figures produce nice results. In Fig. 4, I wanted to plot a set of ellipses, one inside another. But I used the wrong polar formula for the ellipse so the ellipses shifted a bit each time one was plotted (see Program Listing 4).

Basically, it's the same program as the others. Only the formula for the ellipse in the subroutine starting in line 200 is different, along with some other variables to set the size.

Figure 4. Shifted ellipses.

Program Listing 4

Some patterns just don't turn out the way you hope (see Program Listing 5). For example, Fig. 5 was supposed to provide some lovely moiré effects. Two circles are drawn, one on top of the other, with rays from the center. I don't like the way it turned out, though, and no amount of fiddling with the constants improves it. Listing 5 shows how this angry-looking plot was developed.

Finally, some patterns you think would be ideal for the plotter just don't work out. In the March 1982 issue of *80 Micro* (p. 112), Bob Boothe had some lovely figures, including a number of superimposed sine waves. A plotter does a great job plotting sine waves, so you would think that I could have surpassed Boothe's figure using Program Listing 6.

The result, Fig. 6, is disappointing—my plotter doesn't do as good a job as Bob Boothe's printer. The ball point pen doesn't seem to provide sufficient blackness. The constant pressure from the ball point pen wrinkles the paper, too. It takes about two hours to draw Boothe's Eye Killer, and the paper gets an awful workout during that time.

In all, however, I find the results of my little experiments pleasing. The programs to make these designs are short. Many more complex programs are available so that you can plot almost anything you want. ■

Jerry O'Dell is a professor of psychology at Eastern Michigan University, Ypsilanti, MI 48197.

Aid for AIDS-III

by Amee Eisenberg

In March and April 1983, *80 Micro* published tandem articles on AIDS-III, a data management system (pp. 136 and 168, respectively). The software was sound, but after reading the articles I still didn't understand how to make the darned thing run. Many moons passed before I figured out the system. I'll give you the benefit of my insight.

The Automated Information Directory System (AIDS) comprises three parts: the field, the record, and the file. AIDS handles these parts in specific ways, but allows you an almost unlimited definition of them.

Fields are the smallest possible blocks of data. In the checkbook example cited in the AIDS articles, the fields are check number, dollar amount, payee, etc. Although this sample uses five fields, you can specify up to 12 fields.

Records are blocks of data made up of a set of fields. In AIDS-III, a single record contains the five fields used to describe the information on each check.

Files are blocks of data comprising a set of records. The number of records allowed in a file is determined by the amount of available memory.

AIDS-III got you stymied? Here are some tips on how to use this data management program.

Running AIDS

To run AIDS, you must initialize Basic and reserve file space. Use the syntax "BASIC - F:n", where *n* is the number of files you want to open. I usually use three. You must initialize the files despite the default value of three files for Basic. Without initialization, a BAD FILE NAME error results in all attempts to write or read a file.

AIDS is not necessarily the system you think you see. It is flexible enough to let you modify it to suit your data management needs. You have to change a few lines of Basic code to configure AIDS. This is where imagination comes in. For example, say I need a system that keeps track of friends' birthdays so I can send greeting cards.

The procedure is simple. Lines 4990-5120 in the March AIDS-III program contain the data statements that create an AIDS system. List these lines and study the remarks associated with them. Change the lines according to your needs. In my case, for instance, I need names, addresses, and birth dates. While I was at it, I decided to file phone numbers as well. My address system appears in Fig. 1.

Save the AIDS program with your custom system configuration under its own name. This way, you can refer back to the original system any time you need to create a new AIDS system.

Once you've created your system, the next step is getting your data in and out of it on demand. Run your AIDS system. After the initial AIDS message is displayed, the program displays your system and the menu options on the screen (see Fig. 2).

If you are developing a new system, the only menu option applicable is Add Records. Add your data, then return to the main menu (press the shift and up-arrow keys simultaneously). See Table 1 for the AIDS control keys. One note: AIDS does not accept lowercase input.

To save the information just added, choose the Select & Save Records op-

```

FOR WINNERS ONLY

PROFESSIONAL FOOTBALL ANALYSIS SYSTEM

THE MOST COMPREHENSIVE SYSTEM — NOW AVAILABLE FOR 1983

At the controls of the most sophisticated football analysis software, your personal computer can make the upcoming football season the most exciting ever!

GRIDSTAR™, the professional football analysis system, is comprised of four main components:

- ★ **PROFESSIONAL FOOTBALL DATA BASE** — File comprised of 2184 regular season games, 1973 to 1983 inclusive.
- ★ **DATA BASE MANAGER** — Comprehensive utility to display, edit, and search your Data Base.
- ★ **WEEKLY HANDICAPPER** — This program handicaps a full week of games using the GRIDSTAR™ STRATEGY.
- ★ **GRIDSTAR™ DEVELOPMENT PROGRAMS** — All programs used to develop and test the GRIDSTAR™ STRATEGY.

Professional Football Data Base
At your disposal, a complete history of America's No. 1 Sport — 11 years of game data. Each 16-byte game record includes home and away teams, home and away scores, the closing line, day, week and date.

Data Base Manager

To keep your Data Base current for years to come, full EDIT FUNCTION allows you to change or add any game record. The sophisticated DISPLAY MODE lets you scroll up and down through your Data Base. The extensive SEARCH FUNCTION is a serious analytical tool. Set any combination of 20 search parameters and invoke a search for qualified games. Automatic won/loss analysis can be instantly displayed.

Weekly Handicapper Using the GRIDSTAR™ STRATEGY

This is your Sunday morning predictor program. The program applies the GRIDSTAR™ STRATEGY to each upcoming game and tells you which teams to bet. It will indicate 5 to 10 bets each week determined by the five analysis angles of the GRIDSTAR™ STRATEGY. Your only responsibility is to keep the Data Base current, by keying in the lines and scores each week.

The GRIDSTAR™ STRATEGY

Employing advanced statistical techniques, our development team has researched numerous methods of predicting winners against the spread. Of these, five approaches proved effective enough to be incorporated into the GRIDSTAR™ STRATEGY.

- POWER RATING ANALYSIS
- STREAK ANALYSIS
- POINTSPREAD ANALYSIS
- HEAD-TO-HEAD ANALYSIS
- MONDAY NIGHT ANALYSIS

Each of the above approaches, taken separately, has proven to be a consistent winner. But when combined into a comprehensive handicapping system, the GRIDSTAR™ STRATEGY, the results have been consistently spectacular, year after year. The following table presents the GRIDSTAR™ STRATEGY's record versus the spread over the last decade.

THE GRIDSTAR™ STRATEGY 10-YEAR PERFORMANCE VS. THE SPREAD

	Games	W	L	T	Pct
1973	516	78	43	0	.651
1974	107	69	37	1	.650
1975	103	63	38	4	.631
1976	126	71	51	4	.580
1977	130	77	43	10	.631
1978	128	75	46	7	.613
1979	143	94	59	4	.644
1980	131	90	37	4	.702
1981	148	81	52	5	.638
1982	87	34	23	0	.596
TOTAL	1195	742	416	37	.636

Performance Absolutely Verifiable

All the programs used to develop the GRIDSTAR™ STRATEGY are included in the package. You can run these programs, verify the results, and trace the entire developmental process. The seven strategy development programs not only provide proof of performance, but can form the basis for further research.

Complete Documentation

The accompanying OPERATIONS MANUAL is extensive. Over 100 pages of text take you through the Data Base layout, operation of each program, and the fine points of computer sports analysis. Over 30 charts and illustrations highlight the presentation.

System Requirements

TRS-80™ MOD I or MOD III, 48k, 1 Drive
IBM PC™, 64k, 1 Drive

Every program in the GRIDSTAR™ package is in BASIC, structured, modular, and fully commented. Easy to use, each program is user-friendly, menu-driven, with air tight error-trapping.

tion. This asks you to select which records you want to save. Then it asks for the name of the saved file. You may create a new file, or save the selected records to a file previously created by your AIDS system. Your system writes to the files it creates, not to files created by a different AIDS system. For in-

stance, my address system won't write information to a file created by the AIDS-III checkbook management system.

With all "SELECT &" menu options, you control two parameters. First, you choose the field, and second, you choose a logical operator by which selections are sorted. For example, if I wanted a printout of all the names in my address system, I would choose field A (Name). The logical operators from which I choose appears in Fig. 3.

I'd then ask the computer to print out those names not equal to (#) Z. Then (providing I'm not best buddies with someone who goes by the moniker "Z") I'd get all the names in my address system.

Alternatively, if I needed to know whether any of my friends had a birthday today, I'd use the Select & Print option and field E (birthday) all those birthdays equal to (=) today's date. Then, if anyone's name was displayed, I'd send them a card.

Running Maps, CALCS, and Merge

Option 8 on the main AIDS menu is Create Descriptor File. Descriptor files become important when (and only when) you wish to use the files you've created in your AIDS system with some AIDS subsystem such as Maps, CALCS, and/or Merge. These programs appear in the April 1983 *80 Micro* (p. 168) and are designed to manipulate previously created data files in ways beyond the simple sorts of which AIDS is capable.

Create Descriptor File writes a file that contains the system configuration of your AIDS system. This tells the subsystem programs what to expect when

they read a file from your AIDS system. The Address/DSC descriptor file that I created from my address system indicates that my system is called Amee's Address System, that each record has five fields, and the names and lengths of those fields.

When first run, the AIDS subsystems ask for the descriptor file name. Once the descriptor file has configured the subsystem program, it can then read any other AIDS system file created according to the descriptor file format.

Maps, for example, reads selected files or records and offers three ways to print your data: Print Down Page, Print Across Page, or Print User-Defined Format. The user-defined formats let you sort the fields so you can print data records in any format you choose. In my address system, a user-defined format of A/B/C (field A, skip down one line, field B, skip down one line, field C) creates a mailing label. See Table 2 for the Maps format specifiers.

CALCS is a subsystem that allows you to do some numerical calculations with the data in its files. You may create two formulas and process any field or record through either of those formulas.

Merge manipulates files and records to create lists defined by specified parameters. One nice feature for people working on mailing lists is that Merge searches out and deletes duplicate records. That could save a lot of money by preventing the same person from getting two or three of the same brochure.

In Closing

This article attempts to help you figure out AIDS. It is by no means comprehensive. AIDS is a large and versatile system. But, if you read the March and April articles and play with the system a little, I think you can get a good handle on using AIDS. ■

Financial modeling & spreadsheet

A superb spreadsheet that goes well beyond others at a superb price. This is the spreadsheet chosen by IBM for their own sales force to sell. For the:

Models II, III, 4, 12 . Was \$190 . . NOW . . \$98

Model 16 \$190

— APPLICATIONS PROGRAMS —

DATEBOOK - Appointment Scheduling

Personal DateBook —

Format available for 9 persons \$150

Datebook II - Format available for 27 persons . . . \$295

MILESTONE - Project, Time Scheduling. \$295

Up to 300 activity subroutines with over 30,000 time units. Best features from PERT (program evaluation and Review Technique) and CPM (Critical Path Method)

EPICS - Executive Planning \$250

Includes Schedule Overview, Personal Scheduler, Document Tracking System, Tickler File, Index Scheme, Name & Address File, Questionnaires/Data Tabulator, Personal Analysis Management System, and Project Planning Tool

IMP - Instant Mathematical Programming \$250

Program generator used to solve simultaneous linear & nonlinear equations, linear programming problems and others. Designed for engineers, scientists & mathematicians.

PDBase - Database Management \$245

Uses English-like commands to review and display the data base. Procedure files can be store; data security allows levels of access.

CPR - Text Formater \$195

Designed for use with UCSD p-System text editor or Advanced System Editor for maximum control over raw text formatting & printing

Nutri-Calc (tm) (PRICE CUT 60%) \$129

Allows you to manage diets of any number of people, calculates caloric intake, stores recipes & menus, and computes schedules for weight loss or gain.

MAILER \$125

More than just another mailing list. Allows mail-merge with form letters you prepare yourself.

CAN ELIMINATE THE NEED FOR AN ADDITIONAL
PROCESSOR IN MANY CASES!

80 micro's SECOND ANNUAL READER'S CHOICE AWARDS

All year long, you have to listen to manufacturers tell you which software is best. Here's your chance to tell *them*, with the 1983 Reader's Choice Awards.

This year, we've made it easier for you. We've printed the ballot on the bind-in card opposite p. 226; you don't have to tear out a page from your magazine to vote. To avoid ballot stuffing, we can accept only original cards—no photocopies please.

The entries in this year's poll were compiled from manufacturers' responses to a questionnaire. To this list,

we added last year's first place winners, as well as any product that received 10 percent of the vote in its category.

Look through the entrants, and select your favorite software in each category that applies to you. Write the numbers of your choices on the

ballot. If your favorite program isn't on the list, write in its name and manufacturer. All past and present commercial software packages are eligible.

The deadline for returning ballots is Oct. 7, 1983. We'll publish the results in January. ■

Model I/III Software

I/III—Accounting

1. Accounting Program (McClintock Corp.)
2. Accounting Software (Compumax Associates)
3. Accounts Payable (MAS80)
4. Accounts Payable (Radio Shack)
5. Accounts Payable (Taranto & Associates)
6. Accounts Payable (Universal Data Research)
7. Accounts Receivable (Holman Data Processing)
8. Accounts Receivable (MAS80)
9. Accounts Receivable (Radio Shack)
10. Accounts Receivable (Taranto & Associates)
11. Accounts Receivable (Universal Data Research)
12. ACCT (Micro Architect)
13. Amortization (Rockware Data Corporation)
14. Annrose A/R (Sturdivant and Dunn)
15. Balanced Billing (Universal Data Research)
16. Cashbook (Coolidge & Associates)
17. CBook (Contract Services Associates)
18. Check Register (MAS80)
19. Church Contributions (Universal Data Research)
20. Cycle Billing System (Computer Shack)
21. Data Train's "The Accountant" (Thoughtware Publishing Company)
22. Datagraph (Micro Software Systems)
23. Expense Ledger (Manhattan Software)
24. Fixed Assets (Dep/Acre) (Nepenthe Programs)
25. Flying Club Management System (Communications Systems Laboratories)
26. General Ledger (Universal Data Research)
27. General Ledger (MAS80)
28. General Ledger (Taranto & Associates)
29. General Ledger (Holman Data Processing)
30. GL80 General Ledger (AT-80)
31. Intermediate Bookkeeper (Sturdivant and Dunn)
32. Inventory (McClintock Corp.)
33. Inventory Control (Taranto & Associates)
34. Inventory II (Universal Data Research)
35. Invoicing (MAS80)
36. Job Cost Control (McClintock Corp.)
37. Lynn's Accounts Receivable System (Joe Lynn Computer Services)
38. Lynn's Payroll System (Joe Lynn Computer Services)
39. Maxi CRAS (Adventure International)
40. Non-Disk Check System (Futureview)
41. Non-Disk Electric Bookkeeper (Futureview)
42. Payroll (McClintock Corp.)
43. Payroll (Radio Shack)
44. Payroll (Taranto & Associates)
45. Payroll (Universal Data Research)
46. Payroll (Write-up only) (Nepenthe Programs)
47. Quick Check (Chuck Atkinson Programs)
48. Repeat Billing (MAS80)
49. SBSG Accounts Payable (Small Business Systems Group)
50. SBSG Accounts Receivable (Small Business Systems Group)

51. SBSG General Ledger (Small Business Systems Group)
52. SBSG Inventory (Small Business Systems Group)
53. SBSG Invoicing/Order Entry (Small Business Systems Group)
54. SBSG Payroll (Small Business Systems Group)
55. Schedule K-1 Manager (Empire Software)
56. Single Entry General Ledger (Universal Data Research)
57. Small Business Accounting (Howe Software)
58. Supertax (Rockware Data Corporation)
59. Taxhead (Sturdivant and Dunn)
60. TaxPal (Videotronics of Sarasota)
61. Taxplan (Contract Services Associates)
62. Taxpro (Contract Services Associates)
63. Viz-A-Con (Abacus Associates)

I/III—Business

1. Accounts Payable (Nepenthe Programs)
2. Accounts Receivable (Nepenthe Programs)
3. ACNAP (BV Engineering)
4. Advanced Opvalui (Star Value Software)
5. AgriStar (Radio Shack)
6. Amway Business Manager, The (Manhattan Software)
7. APL + Plus (STSC)
8. BizGraph (Micro-Labs)
9. Bill of Materials Processor (ELTECH Associates)

10. Budget Management (Radio Shack)
11. Business Analysis (Instant Software)
12. Business Mailing List (Radio Shack)
13. Casette Mailing List (Radio Shack)
14. Check Register Plus (SoftCo)
15. Checkwriter (Radio Shack)
16. Church Attendance (Custom Data)
17. Church Donations (Custom Data)
18. Client Files (Coolidge & Associates)
19. Commercial Cooling & Heating Load (McClintock Corp.)
20. Construction Spreadsheet Templates (Software Models)
21. Cycle Analysis (Mar-Tec Stock Market Software)
22. Datagraph (Micro Software Systems)
23. Desktop/Plan 80 (Radio Shack)
24. Directory for Churches (Custom Data)
25. Easy Calc (Instant Software)
26. Enigma—An Unbreakable File (Casier Computing)
27. Executive Calculator—150 Business Progs (MCS Software)
28. Executive Scratch Pad (Software of the Future)
29. Finance Spreadsheet Templates (Software Models)
30. Food Service Cost Estimating (Nepenthe Programs)
31. Heating Fuel Cost (McClintock Corp.)
32. Inventory Control I (Radio Shack)
33. Inventory Master (Logical Systems)
34. Investor III (Good Software Corp.)
35. Invoicem (Computer/Business Services)
36. Invoicer (Computer/Business Services)
37. Job Costing (ELTECH Associates)
38. Labor Collection/Performance (ELTECH Associates)
39. Life Cycle Cost (McClintock Corp.)
40. Loan Amortization (Precision Prototypes)
41. Loan Calculator (Software of the Future)
42. Loancomp (Contract Services Associates)
43. Lynn's Accounts Receivable System (Joe Lynn Computer Services)
44. Lynn's Check Register System (Joe Lynn Computer Services)
45. Lynn's Payroll System (Joe Lynn Computer Services)
46. Mail (Micro Architect)
47. Mail List Manager (Manhattan Software)
48. Mail/File Series II (Logical Systems)
49. Mailing List (Howe Software)
50. Mailing List System (Precision Prototypes)
51. Manufacturer's Cost Estimating (Nepenthe Programs)
52. Manufacturing Inventory Control (Radio Shack)
53. Mar-Tec Charts (Mar-Tec Stock Market Software)
54. Mar-Tec Moving Averages (Mar-Tec Stock Market Software)
55. Maxi Mail (Adventure International)
56. Manufacturing Inventory Control (ELTECH Associates)
57. Minibiz Bookkeeping System (Nepenthe Programs)
58. Momentum Analysis (Mar-Tec Stock Market Software)
59. Money Decisions, Volume I (Eagle Software Publishing)
60. New Interactive Computing Environment (XYZT Computer Dimensions)
61. Ninvoice (Computer/Business Services)
62. Non-Disk Check System (Futureview)
63. Non-Disk Electric Bookkeeping (Futureview)
64. Non-Disk Sales/Inventory (Futureview)
65. NutriCalc (PCD Systems)
66. Options-80 (Options-80)
67. Optionvue (Star Value Software)
68. Opvalu (Star Value Software)
69. Order Entry & Invoicing (Nepenthe Programs)
70. Payroll (Full Service) (Nepenthe Programs)
71. Pers-A-Mail (SoftCo)
72. Personnel Manager (Radio Shack)
73. Personnel Program (Software of the Future)
74. Postman Mass Mailing System (Soft Sector Marketing)
75. Powermail (Powersoft Products)
76. Project Cost Control (Nepenthe Programs)
77. Project Manager (Radio Shack)
78. Purchasing Control (ELTECH Associates)
79. Quick Register (Chuck Atkinson Programs)
80. Real Estate I (Radio Shack)
81. Real Estate II (Radio Shack)
82. Real Estate III (Radio Shack)
83. Real Estate IV (Radio Shack)
84. Real Estate Spreadsheet Templates (Software Models)
85. Shop Order Control (ELTECH Associates)
86. Small Business Management (Howe Software)
87. Statistician, The (Quant Systems)

88. Stockvue (Star Value Software)
89. Tallymaster (Prosoft)
90. Tickertec (Max Ule & Company)
91. Time Manager (Radio Shack)
92. Titlmaster (Sykam Systems Limited)
93. Trend Analysis Program (Harley D. Wilbur)
94. Using VisiCalc TRS-80 Set (John Wiley & Sons)
95. Video Library (Software of the Future)
96. VisiCalc (VisiCorp)
97. VMAIL (Vinzant & Associates Software Division)

I/III—Data-Base Management

1. Alde-III (SoftTrends)
2. Data Base Manager (Universal Data Research)
3. Data-Writer (Software Options)
4. Dataman (A String Systems)
5. Datamaster (Micro Corp.)
6. DBM5 The File Clerk (ComSoft)
7. Disk Listmaker (Manhattan Software)
8. ENB (Allen Gelder Software)
9. DBM (Micro Architect)
10. In-Memory Database Management (Howe Software)
11. Information Storage and Retrieval System (Dezoyea Enterprises)
12. InfoScan (The Smallsystem Center)
13. Instant Sort/Search (Acorn Software Products)
14. KSoft (LOG Electronic Notebook)
15. Library Support Option (XYZT Computer Dimensions)
16. Magnum (Howard W. Sams & Co.)
17. Mail Manager/Label Maker I (Empire Software)
18. Management System II (Micro-80)
19. Maxi Manager (Adventure International)
20. Maxi Utility (Adventure International)
21. Memory Jogger (Micro Software)
22. Producer (Software of the Future)
23. Producer Junior (Software of the Future)
24. Profile (Radio Shack)
25. Profile of Church Members (Custom Data)
26. Profile III Plus (Radio Shack)
27. Teacher's Grade Book (Software of the Future)
28. VIEW The Magic Dot (ComSoft)
29. "Word" Processor, The (Bible Research Systems)

I/III—Data Communications

1. Advanced Baudot Radio Teletype (Richcraft Engineering Ltd.)
2. Advanced Synchronous Packet Radio (Richcraft Engineering Ltd.)
3. Bullet, The (Vinzant & Associates Software Division)
4. Connection-80 BBS (B.T. Enterprises)
5. Electronic Messenger (B.T. Enterprises)
6. Electronic Messenger (Philadelphia Consulting Group)
7. Filexfer (Computer Applications Unlimited)
8. Forum-80 (Small Business Systems Group)
9. Intellitem (Micro Corp.)
10. Lync (International Software Alliance)
11. Modem 80 (Alternate Source)
12. Mousenet (Small Business Systems Group)
13. Newterm/80 (Apparat)
14. Omniterm (Lindbergh Systems)
15. On-Line 80 BBS (Stewart Software)
16. Packet Radio—Software Approach (Richcraft Engineering Ltd.)
17. Smart Terminal (Howe Software)
18. Softcomm (Stewart Software)
19. ST80-CC (Small Business Systems Group)
20. ST80-DUC (Small Business Systems Group)
21. ST80-III (Small Business Systems Group)
22. ST80-UC (Small Business Systems Group)
23. ST80-X10 (Small Business Systems Group)
24. Telcom (Mumford Micro Systems)
25. Teleterm (Telexpress)
26. Uniterm & Uniterm/80 (B.T. Enterprises)
27. Videotex Communications Package (Radio Shack)
28. VISI/Bridge/DJ (Solutions)

I/III—Disk Operating Systems

1. DOSPLUS (Micro Systems)
2. Labimaker (ETS Center)
3. LCDOS (Sykam Systems Limited)
4. LDOS 5.1 (Logical Systems)
5. MULTIDOS (Cosmopolitan Electronics Corporation)

6. Nametagr (ETS Center)
7. NEWDOS/80 2.0 (Apparat)
8. TRSDOS (Radio Shack)
9. TSHARE Multi-User (ComSoft)
10. UCSD p-System (PCD Systems)
11. ZDOS (Cosmopolitan Electronics Corporation)

I/III—Education

1. Better View A Zoo (Storybooks of the Future)
2. Book Conference (The Smallsystem Center)
3. CAIWARE-2D (Fireside Computing)
4. CAIWARE-3D (Fireside Computing)
5. Class File (Teach Yourself by Computer Software)
6. Collectibles I (Basics and Beyond)
7. College Boards Prep Series (Krell Software Corp.)
8. Computer Discovery (Science Research Associates)
9. Computer Typing Course (Futureview)
10. Crossword Generator (Dynatek Information Systems)
11. Datagraph (Micro Software Systems)
12. Early Games for Young Children (Counterpoint Software)
13. Earth Science Series (Teach Yourself by Computer Software)
14. Electronic Breadboard (Instant Software)
15. Factor-Label 1.1 (MMCC Educational Software)
16. Fast Basic Set (John Wiley & Sons)
17. Football Scout (Precision Prototypes)
18. Geography Explorer Series (Instant Software)
19. Grade Point Average (MMCC Educational Software)
20. Gradebook 2.2 (MMCC Educational Software)
21. Individual Study Center (Teach Yourself by Computer Software)
22. Jeopardy! (MMCC Educational Software)
23. K-8 Math with Student Management (Radio Shack)
24. Language Teacher Series (Acorn Software Products)
25. Math Voyager (Instant Software)
26. Measurement Tables and Formulae (Dezoyea Enterprises)
27. Micro Discovery (Science Research Associates)
28. Microcosm I (Basics and Beyond)
29. Microcosm II (Basics and Beyond)
30. Microcosm III (Basics and Beyond)
31. Mighty Word Cannon (The Smallsystem Center)
32. Mind—Steps 1 & 2 (Teach Yourself by Computer Software)
33. Mostly Basic—Educational Package (Howard W. Sams & Co.)
34. Mostly Basic—Household Package (Howard W. Sams & Co.)
35. Mostly Basic—Scientific Package (Howard W. Sams & Co.)
36. Music Teacher (Instant Software)
37. NutriCalc (PCD Systems)
38. Random Access Vol. I Basic File Handling (D.S.C. Publishing)
39. Random Access Vol. II Advanced File Handling (D.S.C. Publishing)
40. Recipe (Software of the Future)
41. Remassem (Remsoft)
42. Scoreit (J. Eli and Associates)
43. Screen Author—Text Pacer (The Smallsystem Center)
44. Slinks Chess Tutor (William Fink)
45. Space Waste Race (Storybooks of the Future)
46. Spelling Primer (Synatek Information Systems)
47. SUPER-CAI (Fireside Computing)
48. T.E.S.T. (Teach Yourself by Computer Software)
49. Time Dungeon—American History (Howard W. Sams & Co.)
50. Time Dungeon—World History (Howard W. Sams & Co.)
51. Triangle Trig (Instant Software)
52. Typing Teacher (Instant Software)
53. Typing Tutor (Microsoft)
54. Vocabulary Builder (Dynatek Information Systems)
55. Words for the Wise (Teach Yourself by Computer Software)
56. Wordum (SoftCo)

I/III—Engineering

1. Active Filter Design (Howard W. Sams & Co.)
2. Auto-Load for Finite Element Analysis (McClintock Corp.)
3. Commercial Cooling & Heating Load (McClintock Corp.)

4. Concrete Beam Design (McClintock Corp.)
5. Concrete Column Design (McClintock Corp.)
6. Critical Path Project Management (McClintock Corp.)
7. Descriptive Stats & Regression-Analysis (Howard W. Sams & Co.)
8. Duct Design (McClintock Corp.)
9. Elec Engineering Ladder Network-Analysis (Howard W. Sams & Co.)
10. Electronics 1 (Howard W. Sams & Co.)
11. Electronics 2 (Howard W. Sams & Co.)
12. Electronics 3 (Howard W. Sams & Co.)
13. Enhanced Finite Element Analysis (McClintock Corp.)
14. Fault Current Analysis (McClintock Corp.)
15. Finite Element Analysis (McClintock Corp.)
16. Fire Sprinkler Grid System (McClintock Corp.)
17. Fuse & Breaker Coordinator (McClintock Corp.)
18. Hardy Cross Water System Analysis (McClintock Corp.)
19. Heating Fuel Cost (McClintock Corp.)
20. HVAC Energy Consumption (McClintock Corp.)
21. HVAC Per 1981 (Coolidge & Associates)
22. Hydraulic Pipe Design (McClintock Corp.)
23. Life Cycle Cost (McClintock Corp.)
24. Lighting Calculations (Coolidge & Associates)
25. Lighting Design (McClintock Corp.)
26. One-Way, Two-Way Concrete Slab Design (McClintock Corp.)
27. Pipe Bending (McClintock Corp.)
28. Plotting Graphs for Line Printer (Howard W. Sams & Co.)
29. Plotting Graphs for Video Display (Howard W. Sams & Co.)
30. Residential Cooling & Heating Load (McClintock Corp.)
31. Shear Wall Design (McClintock Corp.)
32. Short Circuit Calculations (Coolidge & Associates)
33. Solar Collector F-Chart Calculation (McClintock Corp.)
34. Steel Beam Design (McClintock Corp.)
35. Steel Column Design (McClintock Corp.)
36. Surface Plot (Micro-Labs)

I/III—Games

1. Adventure (Adventure International)
2. Air Flight Simulator (Instant Software)
3. Alraid (Small System Software)
4. Alien Defense (Soft Sector Marketing)
5. All Time Baseball (Krell Software Corp.)
6. Andromeda Conquest (Avalon Hill)
7. Apple Panic (Funsoft)
8. Armored Patrol (Adventure International)
9. Astrobell (Acorn Software Products)
10. Astrology (Radio Shack)
11. B-1 Nuclear Bomber (Avalon Hill)
12. Babie Terror (Funsoft)
13. Back 40 III (Adventure International)
14. Balrog (Adventure International)
15. Battle of ZEighty (JMG Software International)
16. Bedlam (Radio Shack)
17. Biorythms (KMCS/Phantasy)
18. Black Death (Krell Software Corp.)
19. Black Gold (Krell Software Corp.)
20. Black Hole, The (Funsoft)
21. Block-Breaker (Cedar Software Co.)
22. Bulls and Bears (Krell Software Corp.)
23. Casino Blackjack/Counter (Manhattan Software)
24. Casino Games I (Radio Shack)
25. Cassette Copy (B. Erickson Software)
26. Cassette Dump (B. Erickson Software)
27. Caterpillar (Soft Sector Marketing)
28. Chek-Ches/Starship-3 (B. Erickson Software)
29. Chess Board (Futureview)
30. Chicken (Soft Sector Marketing)
31. Clash (Computer Shack)
32. Close Assault (Avalon Hill)
33. Combat (Adventure International)
34. Computer Acquire (Avalon Hill)
35. Computer Baseball Strategy (Avalon Hill)
36. Computer Football Strategy (Avalon Hill)
37. Computer Foreign Exchange (Avalon Hill)
38. Computer Statis Pro Baseball (Avalon Hill)
39. Computer Stocks & Bonds (Avalon Hill)
40. Computer Title Bout (Avalon Hill)
41. Conflict 2500 (Avalon Hill)
42. Connections (Krell Software Corp.)
43. Conquest of Chasterwood (Adventure International)
44. Cosmic Patrol (Instant Software)
45. Craps/Slot Machine (B. Erickson Software)
46. Curse of Crowley Manor (Adventure International)
47. DC Ohms Law/FCL-FRC (B. Erickson Software)
48. Deadline (Infocom)
49. Death Planet: The Dogstar Adventure (Adventure International)
50. Demon Seed (Trend Software Company)
51. Demon Venture #1-Relgn of the Red Dragon (Adventure International)
52. Dnieper River Line (Avalon Hill)
53. Dragoolair (Futureview)
54. Draw Poker (Avalon Hill)
55. Duel on a Dead Planet (Futureview)
56. Duel-n-Droids (Acorn Software Products)
57. Earthquake—San Francisco 1906 (Adventure International)
58. Electoral College (Krell Software Corp.)
59. Eliminator (Adventure International)
60. Empire of the Overmind (Avalon Hill)
61. Enemy Evasion (Acorn Software Products)
62. Escape from Traam (Adventure International)
63. Everest Explorer (Acorn Software Products)
64. Exterminate (JMG Software International)
65. Flight Simulator (Sublogic Corporation)
66. Flying Saucers (Radio Shack)
67. Forest Fire Dispatcher (Sublogic Corporation)
68. Fortrees II (Soft Sector Marketing)
69. Fredericksburg (Avalon Hill)
70. Galactic Series (Adventure International)
71. Galactic Tactics (Futureview)
72. Galaxy (Avalon Hill)
73. Gammon Gambler Backgammon (Radio Shack)
74. Gas Attack (Comp-U-Gamer Software)
75. GFS Sorceress (Avalon Hill)
76. Giant Space Slug (Futureview)
77. Gin Rummy 3.1 (Manhattan Software)
78. Gobbleman (Melbourne House Software)
79. Gone Fishing/Concentration (B. Erickson Software)
80. Grand Prix (Melbourne House Software)
81. Guns of Fort Defiance (Avalon Hill)
82. Halls of Time (Mops Computer Systems)
83. Haunted House (Radio Shack)
84. Hidden Valley (Adventure International)
85. Horse Race Handicapping System (3G Company)
86. IC-Timer-1/IC-Timer-2 (B. Erickson Software)
87. In-Between/Shell Game (B. Erickson Software)
88. Indoor Soccer (Pel-Tex)
89. Interactive Fiction (Adventure International)
90. Isaac Newton & F.G. Newton (Krell Software Corp.)
91. Jagdstaffel (Discovery Games)
92. Jet Fighter Pilot (Instant Software)
93. Kid-Venture (Adventure International)
94. Killapede (Futureview)
95. King of the Jungle (Acorn Software Products)
96. Kitchen Sink (Instant Software)
97. Laser Ball (Adventure International)
98. Laser Lights (Futureview)
99. Leaper (Cedar Software Co.)
100. Liberator (Computer Shack)
101. Light Cycle (Futureview)
102. Lords of Karma (Avalon Hill)
103. Lost Colony (Acorn Software Products)
104. Lunar Lander (Adventure International)
105. Maces & Magic Series (Adventure International)
106. Mad Mines (Funsoft)
107. Marooned Again (Futureview)
108. Martian Patrol (Melbourne House Software)
109. Master Reversal (Instant Software)
110. Meen Checkers (Adventure International)
111. Medlevel Traveler (Futureview)
112. Microches (Radio Shack)
113. Midway Campaign (Avalon Hill)
114. Migs & Messerschmitts (Discovery Games)
115. Millions (Vinzant & Associates Software Division)
116. Missile Attack (Adventure International)
117. Monty Plays Monopoly (Radio Shack)
118. Monty Plays Scrabble (Radio Shack)
119. Mortar Battle/Puzzle (B. Erickson Software)
120. Morton's Fork (Adventure International)
121. Nightwalker (Adventure International)
122. North Atlantic Convoy Raider (Avalon Hill)
123. Nuclear Beehive (Futureview)
124. Nukewar (Avalon Hill)
125. Number Guess/Dice Roll (B. Erickson Software)
126. Odyssey In Time (Krell Software Corp.)
127. Oscar Draft/Special Mission Pilot (BAPS Software)
128. Outhouse (Soft Sector Marketing)
129. P.T. Boat/Turtle Race (B. Erickson Software)
130. Paddle Pinball (Radio Shack)

131. Panzers East (Avalon Hill)
132. Penetrator (Melbourne House Software)
133. Phantasy Startighter (KMCS/Phantasy)
134. Phase VII 3.0 (Futureview)
135. Pinball (Acorn Software Products)
136. Planet Buator (Soft Sector Marketing)
137. Planet Minars (Avalon Hill)
138. Planetoids (Adventure International)
139. Plasmoid Invasion (Comp-U-Gamer Software)
140. Primary Fight (Krell Software Corp.)
141. Pro-Cap (Trinity Group)
142. Pyramid (Radio Shack)
143. Pythagoras & Dragon (Krell Software Corp.)
144. Quode (Krell Software Corp.)
145. Raaka-Tu (Radio Shack)
146. RAF: The Battle of Britain (Discovery Games)
147. Rally (Soft Sector Marketing)
148. Bear Guard (Adventure International)
149. Regilian Worm (Prosoft)
150. ROM-Save (B. Erickson Software)
151. Rooms of Cygnus IV, The (Comp-U-Gamer Software)
152. Safari/Starship-2 (B. Erickson Software)
153. Santa Paravia and Fiumaccio (Instant Software)
154. Scarfman (Cornsolt Group)
155. Sea Dragon (Adventure International)
156. Sflinks 3.0 Chess (William Fink)
157. Sflinks 4.0 Chess (William Fink)
158. Shootout at the OK Galaxy (Avalon Hill)
159. Showdown (Adventure International)
160. Sim21 (BV Engineering)
161. Sky Sweep (Soft Sector Marketing)
162. Sneak Thief (Soft Sector Marketing)
163. Solitaire Computer Cards (Futureview)
164. Space Attack (Melbourne House Software)
165. Space Intruders (Adventure International)
166. Space Shuttle (Instant Software)
167. Space Warp (Radio Shack)
168. Sparrow Commander (Instant Software)
169. Spook House (Adventure International)
170. Star Clipper (Krell Software Corp.)
171. Starcross (Infocom)
172. StarFighter (Adventure International)
173. Starship/Sherlock Holmes (B. Erickson Software)

4. Draw (Micro Labs)

"No, we're all okay, but our computer's gone."

It could have been a lot worse.

Luckily, all that was missing was the computer and some spreadsheet software. And that should be covered by insurance.

But it isn't. Ed didn't realize that once he started using his home computer on business projects, his homeowners insurance no longer would cover it.

As suddenly as the robbery had occurred, Ed found himself out several thousand dollars with no way to recover it.

You need SAFEWARE™

If you use your microcomputer for business, you can protect yourself from a loss like this with SAFEWARE. For as little as \$35 a year, SAFEWARE insurance covers all hardware, media and purchased software. Both business and personal.

SAFEWARE protects against theft, fire, accidental damage, even the destruction caused by power surges.

And, now, SAFEWARE is available on a 10-day trial basis. If you are not completely satisfied with the coverage provided, return the policy within 10 days for a full refund.

The only risk you take with SAFEWARE is not having it.

To obtain more information, or bind coverage immediately, call the toll free number. Or send the coupon to: Columbia National General Agency, 88 E. Broad St., Columbus, Ohio 43215 (In Ohio call toll free 1-800-848-2112).

1-800-848-3469

Hours: Mon.-Fri. 8:30-7;

Sat.-Sun. 10:30-4:30 (EST)

Amount of Insurance	Annual Premium
---------------------	----------------

Up to \$ 2,000	\$ 35
----------------	-------

\$ 2,001-\$ 5,000	\$ 60
-------------------	-------

\$ 5,001-\$ 8,000	\$ 75
-------------------	-------

\$ 8,001-\$11,000	\$ 90
-------------------	-------

\$11,001-\$14,000	\$105
-------------------	-------

Not avail. in AK, DC, HI, KY, LA, ME, MS, NV, SC, or WY.

BASF QUALIMETRIC™ FLEXYDISKS® BUILT FOR ETERNITY - WARRANTED FOR A LIFETIME.

BASF Qualimetric FlexyDisks® offer you more...an extraordinary new lifetime warranty. The BASF Qualimetric standard is a dramatic new international standard of quality in magnetic media...insurance that your most vital information will be secure for tomorrow when you enter it on BASF FlexyDisks today.*

We can offer this warranty with complete confidence because the Qualimetric standard reflects a continuing BASF commitment to perfection...a process which begins with materials selection and inspection, and continues through coating, polishing, lubricating, testing, and 100% error-free certification. Built into our FlexyDisk jacket is a unique two-piece liner. This BASF feature traps damaging debris away from the media surface, and creates extra space in the head access area, insuring optimum media-to-head alignment. The result is a lifetime of outstanding performance.

When your information must be secure for the future, look for the distinctive BASF package with the Qualimetric seal. Call 800-343-4600 for the name of your nearest supplier.

SUPA-EDIT™

Supa-Edit is a powerful machine language utility, designed to enhance LIST/EDIT commands of Level II Basic.

Supa-Edit uses less than 0.5K of computer memory and suits Model I and Model III.

Supa-Edit comes with and without lower-case driver for 16K, 32K and 48K systems, on premium tape.

SUPA-EDIT SINGLE KEY FEATURES

- LIST FIRST LINE
- LIST LAST LINE
- ENTER EDIT MODE
- LIST LINE BY LINE
BACK AND FORTH
- RECOVER AFTER NEW

Expensive Expansion

EXPENSIVE – The LNW *System Expansion II* and built-in comes with a full 32K of 200ns RAM, RS232c 20 MA current loop serial interface. That's for starters. Next, consider our heavy gauge steel case, power indicator lamp, gold-plated connectors, FR-2 glass epoxy circuit board with solder mask and silk screen legends. Then there is the parallel printer port, screen printer port, real time clock, and extra heavy duty onboard power supply with over current protection, over voltage protection and thermal shutdown. If that's not enough then there is the floppy disk controller, guaranteed operation at a 4MHz CPU speed and our 6 month warranty. Every one of these features is **STANDARD**. This is true system expansion. You get every 'expensive' feature without spending more.

CHEAP – Our price is \$399.95. Any way you compare, features or price, LNW's *System Expansion II* is the clear winner. The LNW System has been field tested for over two years with thousands of users. It works with any DOS, is 100% TRS-80 Model I compatible and it works 'right out of the box'. If there is any doubt in your mind as to whether you should buy ours or the 'other guys', just ask an LNW owner!

WE ARE #1 – Number one in price, features, reliability, performance and delivery. LNW is committed to 'expensive' features and quality at reasonable prices. LNW is committed to support, thorough documentation, and reliability.

LNW Research Corp.

2620 WALNUT Tustin, CA. 92680
(714) 641-8850 (714) 544-5744

This has made us the number one manufacturer of system expansion units and accessories for the Model I computer.

EXPANSION OPTION – 8-inch drive capability is as easy as plugging in the *LNDDoubler 5/8* option*. Now you can have any combination of single- or double-density, single- or double-sided, 8" and/or 5" disks on-line! 8-inch disk storage increased to 591,360 bytes – 77-track single-sided, double-density or 1,182,720 bytes – 77-track double-density, double-sided.

The *LNDDoubler's* unique 5/8 switch allows you to boot from 5- or 8-inch system disks and it's accessible from outside the interface. The \$219.95 *LNDDoubler 5/8* comes with a double-density disk operating system (DOS+ 3.3.9), complete with BASIC and utility programs... ready to run your software.

Each of your present 40-track, single-sided 5-inch drives will store up to 184,320 bytes (formatted storage) – that's an 80% increase in storage capacity for only half the cost of just one disk drive. With three 8-inch double-density, double-sided drives your Model I will have 3.75 Megabytes of online storage – that's more storage than a Model II or Model III!

*8" drive operation requires special cable, 8" double-density requires 3.55MHz CPU speed-up modification or LNW-80 4MHz computer.

Talk to the Big Guys

by Douglas Payne

You can use your Model III as a dumb terminal to access mainframes and minicomputers, taking advantage of their advanced computing features.

At times, I need the computing power and speed of a mainframe or minicomputer, but I also want the convenience of working at home or at my office desk. Since I write terminal emulation software for minicomputer and microcomputer systems as part of my job, I decided to do the same for my Model III. This way, I could take advantage of the capabilities of the larger systems using my computer as a terminal. I've used the software with a large IBM mainframe as well as a UNIX-based minicomputer system.

I'm familiar with a wide variety of in-

teractive terminal systems and programming languages, so my software needs all the functions of a conventional "dumb" terminal. The most important consideration is the ability to enter, from the keyboard, the full 128-character ASCII character set, as well as implement the break signal. It must correctly display all normally displayable characters as well as the control characters that cause cursor movement. It also has to set transmission speed, parity, number of stop bits, and duplex.

I also included features found only in more sophisticated terminals: an audible bell, tab stops, and alternate cursor types. And since I was not really using a terminal, but a computer, I added functions to transfer disk files to and from another computer, load Intel-format object code from a remote computer, and save a profile of all terminal characteristics.

Like most software, this program doesn't provide features that satisfy everyone. I have not included user-translate tables and special function keys, since most of the systems I use already provide them. Anyone familiar with Z80 machine language would have little trouble adding them.

Program Overview

Since the program is fairly large (in excess of 2,000 lines), I divided it into six parts. Although the listings shown here are in Radio Shack's EDTASM

format, a more viable approach would be to use an assembler that generates relocatable code and a linkage-editor to combine object files into an executable module (Microsoft's MACRO-80 and LINK-80, for instance). I have used equates to absolute addresses for those symbols referenced in modules other than the one in which they are defined. Although this method works, it is prone to error and makes changes to the program difficult. I would highly recommend the use of MACRO-80 to anyone contemplating making substantial changes to the program.

The six Program Listings are called UT1/SRC, UT2/SRC, and so on up to UT6/SRC. The first listing consists of the program start-up routines, the basic keyboard, and RS-232 character-handling routines. The second program contains the Intel-format object code loader and its support routines. The third listing comprises the RS-232 I/O drivers. The fourth program deals with parameter selection, and the fifth with file transfers. The sixth listing contains some program variables and constants.

The following is a description of each of the six program listings.

Program Listing 1

The first 48 bytes of Program Listing 1 are reserved for the program stack.

[ESC] D	[EM] X'19'
[ESC] >	Receive a file
[ESC] <	Transmit a file
[ESC] [ESC]	Exit to the main menu

Table 1. Escaped characters.

Entry to the program from the system occurs at label UTERM, in line 01360. The old stack pointer is saved and restored prior to exiting to the system, and a new one is set. System routine INITIO ensures that the display input/output (I/O) driver is in its original state so special graphics characters and space compression characters in the various menus display properly. Since RS-232 input is interrupt-driven, the receive interrupt vector points to my interrupt handler (see Program Listing 3).

While the sign-on logo is displayed, the program checks for the existence of the file Profile/TRM. Once found, the file should contain the various option settings saved through option 8 of the main menu (see Program Listing 4).

"Most control characters received from the RS-232 are ignored. Those that aren't receive special treatment because they don't display correctly."

The file consists of a single 256-byte record containing all optional terminal characteristics, as well as the character representations of those settings displayed in the menus. The program reads the record and initializes those settings. Afterward, control passes to LOGON (see Listing 4) to display the main menu, letting the user alter any terminal characteristics.

The remainder of Listing 1 comprises the program's main loop. Control always returns to label CHKRMT in line 02430 to process characters received from the RS-232 interface. If no input is available, control passes to label CHK-KBD (line 03290), to process keyboard input. All available characters from the RS-232 input are processed before any keyboard input with the exception of break, but only one keyboard character is processed before returning control to CHKRMT. This scheme gives the RS-232 input priority over the keyboard.

Most control characters received from the RS-232 are ignored. Those that aren't receive special treatment because they don't display correctly. Since

Listing 1 continued

a carriage return (X'0D') moves the cursor to the start of the next line, rather than the current one, the cursor-to-start-of-line character (X'1D') appears. The LNFEED routine at line 05230 displays line feed characters (X'0A').

The TRS-80 displays line feed the same as carriage return, so line feed becomes a cursor-down character. However, since a cursor-down displayed on the bottom line of the screen causes the cursor to move to the top line, the system calls the Scroll routine to scroll up one line instead. Back-space (X'08') appears as a cursor-left character so it doesn't erase any characters.

The bell character (X'07') generates an audible tone through the cassette port. In order to hear it you need to connect a small amplifier and speaker to the AUX jack of the cassette cable.

"If the remote system does not support the protocol, characters are lost whenever scrolling takes place, the screen is cleared, a carriage return is displayed, or line-wrap occurs."

The form-feed character (X'0C') clears the screen. The tab character (X'09') moves the cursor to the next tab stop. The sequence ESC, STX (X'1B', X'02') signals that the data following it is Intel-format object code to be loaded into memory (see Listing 2).

Since interrupts are disabled during output to the screen, XON/XOFF flow control occurs whenever the possibility exists that characters will be lost due to scrolling or other lengthy operations. See Listing 3 for a description of this protocol.

If the remote system does not support the protocol, characters are lost whenever scrolling takes place, the screen is cleared, a carriage return is displayed, or line-wrap occurs. The problem occurs only at transmission speeds greater than 300 baud.

The code at label CHKKBD processes keyboard input. Since part of the ASCII character set is unavailable from the keyboard, I devised a method to enter those omitted characters. The two-character sequence [ESC] [character] represents the nonexistent characters.

They Driving Force!

JFD - COCO DISC SYSTEM - \$449

J & M Systems, Ltd. is a leader in the Model III marketplace with our JFD-III Disc Controller. With thousands in operation, we have set new standards in controller performance and reliability. We bring these same high standards to the COCO, resulting in the highest quality disc controller system on the market. Compare these functions before you buy:

- Price: \$449 includes controller, first drive, disc basic in ROM, and manuals. Just plug it in.
- Never needs adjusting. Our exclusive Digital Phase Lock Loop Data Separator and Digital Frequency Circuit eliminates the 3 adjustments found on other controllers.
- High quality standard production disc drives. For improved service and reliability. Tandon A Teco drives provide twice the read sensitivity that the drives found in other disc systems do, and hold their alignment far longer.
- Gold-plated card edge connectors throughout.
- Software compatible with Radio Shack Disc Basic, Flex, and QSA.

J & M Systems, Ltd., 137 Utah NE, Albuquerque, N.M. 87108

J&M SYSTEMS, LTD.

AMERICAN SOFTWARE CLUB NOW HAS 15,000 MEMBERS AND KEEPS ON GROWING.

HERE ARE TEN REASONS WHY:

- 1. PRICE:** ASC promises that members' prices are the lowest available. If you find a lower, nationally advertised price, we will gladly credit your account with the difference.
- 2. NO MINIMUM:** As a Club member you are never obligated to buy anything you don't want.
- 3. FAST SHIPMENT:** The products we offer in our catalog are kept in stock, so orders are usually shipped within 24 hours.
- 4. PRODUCT DESCRIPTIONS:** ASC's bi-monthly Compendium contains extensive product descriptions on every offering so that novice and expert alike know what they are buying.
- 5. WIDE SELECTION:** ASC carries hundreds of programs as well as hardware and supplies for APPLE, ATARI, CP/M, IBM PC, and TRS-80 computers.

- 6. PRODUCT EVALUATION:** Each product sold by ASC must first pass rigorous evaluation before it is included in the Club's offerings.
- 7. PRODUCT SUPPORT:** We believe it is as important to support products as it is to sell them, so we stand behind every product we sell.
- 8. EASE OF ORDERING:** An order form is provided with every catalog, and the Club also provides a toll free number for 24 hour, 7-days-a-week service.
- 9. CONSUMER SERVICES:** The Club provides information and suggestions as to product suitability and compatibility, and can call on the assistance of additional outside sources.
- 10. SPECIAL OFFERS:** Club members will from time to time receive special exclusive offerings that greatly enhance the value of membership.

My computer is: ☐ APPLE ☐ ATARI ☐ IBM PC
☐ TRS-80 (Mods. 1, 2, 3, 4) ☐ CP/M (8" or 5 1/4")

Enter the Escape command by pressing the shift and up-arrow keys. This sequence is also used to initiate file transfers, and to exit to the main menu display. Table 1 summarizes the escaped characters.

The break signal is a frequently misunderstood part of terminal-to-computer communications. It generates an error condition in the transmission of data by causing a character to be sent with no stop bit(s). The Model III user's manual contains a good description of the composition of a character as it is transmitted via the RS-232 port. This error condition is detected by the receiving hardware as a framing error and signals an interrupt to the computer.

The TRS-80 generates a break by turning off the transmitter for a period of time. Therefore, when the break key is pressed, the transmitter turns off for the time it takes to send two characters, and then turns back on. Since the time off depends on the transmission speed (baud rate), the delay factor is kept in the variable BRKTIM, which is changed whenever the baud rate is changed. This ensures that the computer receiving the break signal detects it, regardless of the transmission speed.

Control characters received from the keyboard are treated in much the same manner as those received from the

RS-232; that is, they are made to display correctly on the screen when necessary. However, all control characters from the keyboard are sent to the RS-232 whether or not they are displayed. Most control characters are generated with the shift-down-arrow characters sequence described in the Model III user's manual. Those that aren't require the escape key mechanism described earlier.

Tabs are entered with the right-arrow key. Tab stops are set and cleared with shift-right arrow. To set a tab stop, position the cursor where the stop is desired and press the shift and right-arrow keys. This works as a toggle. Tab stops previously set are cleared.

"... if you select the full-duplex option, characters don't appear when they're entered. The remote computer should echo them back to you if necessary, and they are displayed as received."

The clear key has the same effect as CTRL L: it clears the screen and sends an FF character to the RS-232 port. The up-arrow key generates a [, and pressing control-G rings the bell. Line feed is entered with the down-arrow key. Note that if you select the full-duplex option, characters don't appear when they're entered. The remote computer should echo them back to you if necessary, and they are displayed as received.

The routine TABSET at line 04530 sets or clears tab stops. An 8-byte table TABTBL (see Program Listing 6), stores tab settings. Each of the 64 bits in this table represents a column on the screen. A 1 bit signifies the presence of a tab stop. The routine TABCHR at line 04770 moves the cursor to the next tab stop. Note that once the cursor reaches the end of a line, it advances no further. The BRINGG routine at line 05420 rings the bell, and CURCOL (line 05590) computes the cursor's current screen column relative to zero.

Continued on p. 239

**FOR TRS-80 MODELS 1, 3 & 4
IBM PC, XT, AND COMPAQ**

The MMSFORTH System. Compare.

- The speed, compactness and extensibility of the MMSFORTH total software environment, optimized for the popular IBM PC and TRS-80 Models 1, 3 and 4.
- An integrated system of sophisticated application programs: word processing, database management, communications, general ledger and more, all with powerful capabilities, surprising speed and ease of use.
- With source code, for custom modifications by you or MMS.
- The famous MMS support, including detailed manuals and examples, telephone tips, additional programs and inexpensive program updates, User Groups worldwide, the MMSFORTH Newsletter, Forth-related books, workshops and professional consulting.

mmsFORTH

A World of Difference!

- Personal licensing for TRS-80: \$129.95 for MMSFORTH, or "3+4TH" User System with FORTHWRITE, DATAHANDLER and FORTHCOM for \$399.95.
- Personal licensing for IBM PC: \$249.95 for MMSFORTH, or enhanced "3+4TH" User System with FORTHWRITE, DATAHANDLER-PLUS and FORTHCOM for \$549.95.
- Corporate Site License Extensions from \$1,000.

If you recognize the difference and want to profit from it, ask us or your dealer about the world of MMSFORTH.

Listing 1 continued

ARE YOU TIRED OF BLASTING ALIENS?

Have you had too much of firing laser cannons, guarding fuel canisters, eating ghosts, evading missiles, and just plain getting killed off in pursuit of a few points? Or maybe you never really liked arcade games in the first place; either way, there is a program that you shouldn't be without. The name of this program:

SUPREME RULER

You become leader of a small and struggling country, attempting to stay alive, and expand if you can. Your government will have to deal with the many things every government runs in to; things like protecting your economy (or else risk a recession), providing services and food for your people, stimulating industry and encouraging new business, managing your government revenues, and controlling your army. From 1 to 4 players can take part if you have 16K of memory, or up to 9 players with more memory. If you don't have enough people around, you can assign any number of the countries for the computer to control. (The computer is a worthy opponent, and it plays by all the rules!) You won't quickly become tired of this program, since you will have to make very many decisions to become a successful ruler; you must ponder tax rates, food distribution, government services, large-scale loans, your army's status, your battles, and much more.

Included with the program is a 40 Page Handbook on how to rule a country successfully. (It is 8 1/2 by 11 inches, spiral bound; most business programs don't have a manual as good as ours!) The program is top-quality with excellent input and display routines.

The 16K and 32K versions are provided together on cassette; the 32K version contains a SAVE GAME feature. PRICE: **\$18.50**

A 32K version (with SAVE GAME) is provided on diskette. PRICE: **\$20.50**

For those of you with 48K: SUPREME RULER PLUS!

We fill up the extra memory with features such as Research/Development spending to make your army more efficient, a credit rating system, expanded reports for information about your country, more intelligent computer opponents, selectable computer "skill levels" (the computer countries can be anything from "Defensive" to "Aggressive"), and MUCH MORE!

With a 50+ Page manual (re-written specifically for SUPREME RULER+), and the program provided on either Cassette or Diskette. PRICE: **\$26.50**

(Note: Any SUPREME RULER Purchaser can upgrade to SUPREME RULER+ at any time by returning the original disk/cassette and paying only the difference in price plus \$1 shipping.)

AND FOR THOSE OF YOU WHO ARE NOT TIRED OF ARCADE GAMES . . .

EXTERMINATE!

This 100% Machine Language program will challenge any arcade-game player. An original idea (as far as we know), in which your job is to prevent hordes of alien "BUGS" from escaping out of an underground cavern, by destroying ("Exterminating") them. For the novice, this game becomes only gradually more difficult, so as not to intimidate the player. But for an advanced player, there are methods of getting to the higher skill levels very quickly. EXTERMINATE! is a game with quality graphics and sound, and surprises to keep you busy at every new skill level.

EXTERMINATE: 16K and 32K versions on same Cassette - **\$15.50**

Model I/III 32K program on Diskette - **\$17.50**

CLEARANCE!!!

We constantly examine and update our software offerings in order to make sure that they all live up to our current high standards of quality, and sometimes we remove a program from our line-up. This recently happened to our battle-simulation program, The BATTLE of ZEIGHTY. So now we have stopped producing it, but we still have a pile of them stocked up in our inventory. To get rid of them, we've cut the price IN HALF! (Previous purchasers have been compensated.) With this special offer there will be no warranty other than the Media Guarantee. (There will be no updates or returns.)

This is not to say that The BATTLE of ZEIGHTY isn't a good program; it is a well-made one player game. It allows you to set up a small army to your own specifications, and then you must use it to try to take over the fictional Zeighty Pass. You give each of your army divisions specific orders, while the computer plays the defending army. The display is satisfactory, consisting of a "Map" that shows the position of the army divisions. Land features (terrain) are not taken into account, but you'll have enough to keep you busy. The program contains a wide set of commands and options (such as mines, artillery, 4 different division types, and more). It also has a built-in "HELP" function.

With a 20 page, full size manual; for 16K, Cassette - \$ 8.95
32K, Diskette - **\$10.95**

OUR "TRIPLE PROTECTION" GUARANTEE

In today's software world it is hard to tell a good program from a bad one by only a magazine ad; that's why JMG has a warranty plan that will guarantee your satisfaction. Here is our "Triple Protection" guarantee:

- 1) **QUALITY GUARANTEE:** If you are unsatisfied with the software product you have purchased, you may return it (in good condition) within 14 days for a refund, less a \$2 handling charge. (We also ask that you send us a brief letter stating the reason for your return.)
- 2) **UPDATES GUARANTEE:** We always listen to our customers, and we often improve and expand our software products on the basis of their comments. If we make an improvement to a product and release a new version, all our previous purchasers will be notified and offered the update. To receive an update, you only have to return your original disk plus \$1 for shipping costs.
- 3) **MEDIA GUARANTEE:** The diskette or cassette has a Lifetime Guarantee. If yours turns out to be defective, or it fails and you do not have any backups made, then just return the disk/cassette and we'll replace it.

TO ORDER:

Just pull out a piece of paper and write the following information down:

- 1) Your name and address (including zip/postal code)
- 2) The program you would like.
- 3) Disk or Cassette?
- 4) State the computer you own. (Model I or III? How many Disk drives? 16K, 32K, or 48K?)
- 5) Enclose either payment (check / money order) OR Credit Card name & number, and expiry date.
- 6) Mail it to JMG, to either of our addresses.

OR

Go and see your nearest dealer. If he doesn't carry JMG programs, shout at him a bit.

Offset Contents

0	: (indicates start of record)
1	Two hexadecimal characters representing the length of object code in the record.
3	Four hexadecimal characters specifying the address at which the code will be loaded.
7	Two hex digits giving the record type: '00' the record contains object code. '01' end record, load address is the entry point address.
9	n pairs of hexadecimal digits containing the object code, where n is the length specified at offset 1.
9+2n	Two hexadecimal digits representing the checksum, which is such that the sum of all the bytes of code, address, length, record type, and checksum is equal to 0 modulo 256.

Table 2. Intel-format object code.

Program Listing 2

Program Listing 2 calls the Loader routine at line 00330 whenever it receives the escape key-[STX] sequence from the RS-232. It loads Intel-format object code into memory. Table 2 describes this object code. The object file must have this format for the loader to work correctly.

The lowest and highest address locations loaded are stored and displayed along with the entry point address when the load is complete. The program displays the load address of each record as it is received. A message informs you when a checksum error occurs, but the

"When the load is complete, regular terminal operations resume."

load continues. When the load is complete, regular terminal operations resume. To save the loaded code, exit to TRSDOS and use the Dump command to create a command file.

The routines GETBYT (line 01590), GETDIG (line 01790), and CVB (line 01890) read a pair of hexadecimal (hex) digits and return their binary value. The routine CVH at line 02070 converts a word to four hex digits for display.

This loader doesn't check for invalid load addresses or program code that overlays part of the terminal program. It could hang up waiting for correct data if you failed to use a valid Intel-format object file.

REMSOFT, INC.

Let Your TRS-80® Teach You ASSEMBLY LANGUAGE

Tired of buying book after book on assembly language programming and still not knowing your POP from your PUSH?

REMSOFT proudly announces a more efficient way, using your own TRS-80® to learn the fundamentals of assembly language programming . . . at YOUR pace and YOUR convenience.

Our unique package, "INTRODUCTION TO TRS-80® ASSEMBLY PROGRAMMING", will provide you with the following:

- Ten 40 minute lessons on audio cassettes
- A driver program to make your TRS-80® video monitor serve as a blackboard for the instructor.
- A display program for each lesson to provide illustration and reinforcement for what you are hearing.
- Step-by-step dissection of complete and useful routines to test memory and to gain direct control over the keyboard, video monitor, and printer.
- How to access and use powerful routines in your Level II or Model III Basic ROM

AVAILABLE FOR MODEL 1 & 3

REMASSEM (tape) \$74.95
REMASSEM (disc) \$79.95

LEARN TRS-80® ASSEMBLY LANGUAGE DISK I/O

Your disk system and you can really step out with REMSOFT'S Educational Module, REMDISK-1, a "short course" revealing the details of Disk I/O PROGRAMMING using assembly language. Intended for the student with experience and assembly language.

COURSE INCLUDES:

- Two 45-minute lessons on audio cassette
- A driver program to make your TRS-80® video monitor serve as a blackboard for the instructor.
- A display program for each lesson to provide illustration and reinforcement for what you are hearing.
- A booklet of comprehensive, fully commented program listings illustrating sequential file I/O random-access file I/O and track and sector I/O.
- A diskette with machine readable source codes for all programs discussed in both Radio Shack EOTASM and Macro formats.
- Routines to convert from one assembler format to the other.

Presently available for Model 1 only
REMDISK-1 only \$29.95

Dealer inquiries invited

These courses were developed and recorded by Joseph E. Willis and are based on the successful series of courses he has taught at Meta Technologies Corporation, the Radio Shack computer Center, and other locations in Northern Ohio.

Program Listing 3

This part of the program contains the RS-232 I/O drivers and receive interrupt handler. Interrupts allow the RS-232 interface to function at a high transmission rate without the possibility of losing characters. The I/O drivers also properly handle XON/XOFF flow control. This form of protocol is very useful in transferring data at high speed. In fact, some computer network interfaces don't function properly without it.

The protocol states that the sending system must stop transmitting immediately upon receipt of the XOFF character (X'13'), and may resume transmission when it receives an XON signal (X'11'). In reality, most computers can't stop sending immediately, because it may be impossible to halt characters

"This form of protocol is very useful in transferring data at high speeds. In fact, some computer network interfaces don't function properly without it."

in the process of being sent. For this reason, the receiving system must be prepared to accept some additional data after sending XOFF.

Characters received at the RS-232 interface are read by the interrupt handler RXINT (line 00880) and stored in a 256-byte circular buffer IBUFF (see Program Listing 6). Pointers address the next available spot in the buffer and the oldest character in the buffer (IBUFI and IBUFO). The counter IBUFC contains the current number of characters in the buffer.

When this count approaches an upper limit (240 in this case), FLOOFF at line 01460 is called to halt the incoming flow of data. Because the remote computer supports XON/XOFF flow control, no characters are lost due to the main program's inability to empty the buffer as fast as it is filled. This is particularly useful, if data is received while one of the menus is displayed.

The main program receives and processes characters through calls to

RSRCV at line 00530. This routine returns the next character from the input buffer, or, if none is available, sets the Carry flag to indicate that. FLOON at line 01720 resumes input if the number of characters in the input buffer decreases to a safe level.

The routine RSTX (line 01280) outputs characters to the RS-232 interface. It does so only if an XOFF is not received previously from the remote computer, thus maintaining its own flow control support. If the flow halts, RSTX waits until it receives an XON before sending the character and returning.

This section of code shows one of the flaws of this form of flow control. If an XOFF is sent (perhaps inadvertently as data), without being followed by an XON at some later time, the data flow is permanently suspended. This is a significant problem, particularly in computer networks, where large numbers of systems and differing forms of data are involved. One possible solution would be to ignore the XOFF and resume output if no corresponding XON is received within a reasonable amount of time.

The FLOOFF routine turns off remote input by transmitting an XOFF character. This only occurs if XOFF is not already sent with no corresponding XON. A four-character time delay lets the computer receive any characters in transit before returning to the caller.

FLOON is the counterpart of FLOOFF. It allows input to resume by sending an XON to the remote system. This happens only if an XOFF is previously sent to halt input, and if the input buffer contains fewer than 128 characters.

ZEUS

ZEUS — It's fast and furious as you become the WIZARD fighting off the Thunderbolts of an angry ZEUS. Your Cone of Cold will destroy a thunderbolt and your shield will protect you — for a while. This is the best and highest speed arcade action we have ever done. Difficulty increases in wave after wave, providing hours of challenging fun and a game that you may never completely master. Commodore 64, Vic20 (16k expander), and 16k TRS-80 Color Computer. (ALL MACHINE CODE!) \$19.95 tape \$24.95 disk. (Tape will not transfer to disk.)

SEAWOLFE — ALL MACHINE CODE In this high speed arcade game, you lay out patterns of torpedoes ahead of the attacking PT boats. Requires Joysticks, at least 13k RAM, and fast reflexes. Lots of Color and Sound. A fun game. Tape or Disk for Vic20, Commodore 64, and TRS-80 Color. NOTE: tape will not transfer to disk! \$19.95 Tape — \$24.95 Disk.

QUEST — A NEW IDEA IN ADVENTURE GAMES! Different from all the others. Quest is played on a computer generated map of Alesia. Your job is to gather men and supplies by combat, bargaining, exploration of ruins and temples and outright banditry. When your force is strong enough, you attack the Citadel of Moorlock in a life or death battle to the finish. Playable in 2 to 5 hours, this one is different every time. TRS-80 Color, and Sinclair, 13K VIC-20. Extended BASIC required for TRS-80 Color and TI99/A. \$14.95 each.

32K TRS 80 COLOR Version \$24.95.

Adds a second level with dungeons and more Questing.

WIZARDS TOWER — This is very similar to Quest (see above). We added wizards, magic, dragons, and dungeons to come up with a Quest with a D&D flavor. It requires 16k extended color BASIC. 13k VIC, Commodore 64, TRS-80 16k Extended BASIC, TI99/A extended BASIC. \$14.95 Tape, \$19.95 Disk.

Authors — Aardvark pays the highest commissions in the industry and gives programs the widest possible advertising coverage. Send a Self Addressed Stamped Envelope for our Authors Information Package.

ADVENTURES!!!

The Adventures below are written in BASIC, are full featured, fast action, full plotted adventures that take 30-50 hours to play. (Adventures are interactive fantasies. It's like reading a book except that you are the main character as you give the computer, commands like "Look in the Coffin" and "Light the torch.")

Adventuring requires 16k on Sinclair, and TRS-80 Color. They require 8k on OSI and 13k on VIC-20. Now available for TI99. Any Commodore 64.

\$14.95 Tape — \$19.95 Disk.

ESCAPE FROM MARS

(by Rodger Olsen)

This ADVENTURE takes place on the RED PLANET. You'll have to explore a Martian city and deal with possibly hostile aliens to survive this one. A good first adventure.

PYRAMID (by Rodger Olsen)

This is our most challenging ADVENTURE. It is a treasure hunt in a pyramid full of problems. Exciting and tough!

Dungeons of Death — This is the first D&D type game good enough to qualify at Aardvark. This is serious D&D that allows 1 to 6 players to go on a Dragon Hunting, Monster Killing, Dungeon Exploring Quest. Played on an on-screen map, you get a choice of race and character (Human, Dwarf, Soldier, Wizard, etc.), a chance to grow from game to game, and a 16 page manual. 16k Extended TRS-80 Color, 13k VIC, Commodore 64. At the normal price for an Adventure (\$14.95 tape, \$19.95 disk), this is a giveaway.

Dealers — We have a line of about 100 original programs for the machines listed here. We have High speed Arcades, Quality Adventures, Word processors and Business Software for Small machines. Better yet, we have excellent Dealer support. Phone for information.

Send \$1.00 for Complete Catalogue - Please specify system on all orders - \$2.00 Shipping Charge on each order

Program Listing 4

This section of the program contains the various menus and associated routines to select terminal characteristics, start terminal emulation, or terminate the program. (The file transfer menus are contained in Program Listing 5).

Each routine calls MENDSP at line 04760 to display its menu, prompt for a response, and return the value of the response.

MENDSP requires, as parameters, the address of the menu to be displayed, the option number which is to be the default, and the maximum option number that can be selected. It returns to the caller the number of the option selected less one. (This makes it easier for the calling routine to index into a table of values or addresses with the result.) MENDSP displays the menu until a valid response is entered.

LOGON (line 00920) displays the main menu from which other menus are chosen, terminal emulation started, the profile created, or control returned to TRSDOS.

SLBAUD (line 01630) allows selection of the RS-232 baud rate. Eight values are allowed from a possible 16, ranging from 110 to 19,200 baud. When the desired rate is chosen, it is inserted into the main menu for display. The break signal timer value is set at this time, along with the actual data output to the baud rate control port. These values are saved in BRKTIM and RSBAUD (see Listing 6). If you want to alter this menu to allow other baud rates, note that you also have to update the tables at BDTAB, CBDTAB, and BRKTTB.

PAJARO Models I/III 48k

A new programming environment allowing more efficient development of software with user defined statements. Programs easily chained using a built-in bank of variables, making memory seem much larger. Multiple programs in memory. Both integer and 32 place floating point are supported, as well as random and sequential disk files. PAJARO's syntax is much like BASIC's (alho it can be changed if you wish, to spanish, german or whatever you like). Machine language like commands (Block moves and searches) as well as DRAW and SOUND commands. Compiled programs run up to 20 times faster than interpreted BASIC and may be moved to other types of computers (IBM PC, APPLE and CPM run time units available early '84). Models I/III 48k at least 1 drive. Price is \$88.95 post paid in the US. Manual only is \$25.00.

Listing 4 continued

SLPRTY (line 02570) changes the terminal parity to even, odd, or none. Even parity is the default. The program enters the new parity into the main menu for display and also includes it in the variable RSTYPE.

SLSTPS (line 03130) chooses the number of stop bits to be used. Normally, 1 stop bit is sufficient; 2 stop bits are used mainly in conjunction with 110 baud. As with baud and parity, the new setting is saved for display in the main menu and in RSTYPE.

SLCURS (line 03560) changes from half-duplex operation to full-duplex and vice versa. In half-duplex mode, characters entered at the keyboard display immediately on the screen. No display occurs with full-duplex. The new value is saved in the main menu, and the Duplex flag in Flags reflects the new setting.

SLDUPL (line 03990) allows the use of one of four different cursors. The cursor can be either an underscore or a block, blinking or nonblinking. The system locations CURSCH and CURSBL set the cursor type.

SLSTRT (line 04480) is called when you select the default option from the main menu. The RS-232 interface is re-initialized to reflect any changes in baud rate, parity, or stop bits. RS-232 receiver interrupts are enabled, the screen is cleared, and terminal emulation mode is entered.

SYSRET (line 04620) returns control to TRSDOS. RS-232 interrupts are disabled to prevent spurious interrupts after the program is terminated, I/O drivers are restored by a call to INITIO, and control returns to the system.

Continued on p. 252

FOR APARTMENT BUILDING OWNERS APARTMENT BUILDING MANAGEMENT SYSTEM

Computerize your management functions for up to 30 apartment buildings. Performs all necessary accounting for all owner and tenant transactions.

Transactions include: Rent Pmts, Late Chrgs, Mort Pmts, Utility Pmts, Taxes, Insurance, Capital Expenditures, 40 User Categories (Income & Expenses) and much more.

Produces many reports: Audit Trail, Late Rents, Percent Rtn on Inv, G/L Full Duap, Income, Expenses, Taxes, Investments, Rcvd Rents, Late Chrg, Deductables, Utilities, Insurance, Percent Occupancy, Profit/Loss Stmt, User Cat's, Vacant Units and more.

Runs on TRS-80 Model I & III 32K. Supports Hard Disk Drive operation. ==> Send for FREE Description and Sample Printouts. Also available is FREE 1983 Software Catalog with complimentary Phone Directory Program.

WILL YOU
DONATE \$250
TO TANDY CORPORATION?

TRS-80 MODEL 4

*That's Exactly What You Will Do If You Buy Your TRS-80 Model 4
From A Company Owned Radio Shack Store!*

We sell the TRS-80 Model 4, 64K, RS-232, for \$1749. Radio Shack sells it for \$1995. If you don't need the RS-232 interface, you save \$100. If you would like 128K RAM, add only \$50.

This Month's Software Special
Good Thru 9-30-83

LDOS 5.1 — \$99
For the TRS-80 Model III

**READ THIS PART AND
SAVE
ANOTHER COUPLE HUNDRED DOLLARS**

It's a known fact that Computer Manufacturers sell their computers at a low margin and make up the difference on peripheral items. One of these items is Computer Memory.

If you would like 128K Memory instead of 64K, you pay Radio Shack \$149. If you order it from us at the time you get your Model 4, it costs only \$50. Save a quick \$100! If you need a printer with your computer, see the following page and save \$100 to \$300 over what you would pay Radio Shack for an equivalent printer!

Program Listing 5

This part of the program deals with disk file transfers and with the creation of the Profile/TRM file.

SLFPRM (line 01160) alters the values of various special characters used in the file transfer routines. It functions in the same manner as the menu routines in Listing 4. The program calls one of four routines to read and save the new value of a special character. The default option returns to the main menu. Although each of these routines allows input of characters in the range X'00' to X'FF', the file transfer system deals with characters from which the parity bit (bit 7) has been removed. Therefore, characters in the range X'80' to X'FF' are not recognized.

FPSTFC (line 01850) changes the start-of-file character. This character signifies the beginning of a file received from a remote computer. Data

"Most computers use some form of prompt to signify that they are able to accept input. . ."

received before the start-of-file character is ignored.

FPEOFC (line 02090) chooses the end-of-file character, used to signify the end of a file from the remote system.

FPEORC (line 01930) selects the end-of-record character. This character marks the end of a logical record of data in a file being received.

FPPRCH (line 02010) selects the remote computer's prompt character. Most computers use some form of prompt to signify that they are able to accept input; in fact, most large main-frame systems require that input not begin until this character is sent.

Each of these four routines calls GETHEX to prompt for and read the two hexadecimal digits representing the character.

SAVPRF at line 02770 appears after you select option 8 from the main menu. It creates a record of the current terminal characteristics: duplex, baud rate, parity, stop bits, tab stops, cursor type, and the four special file transfer

characters, and writes this record to the file Profile/TRM. This destroys any previously saved profile.

Routines FILERX and FILETX complete file transfer. The mechanism for initiating a file transfer is simple. The remote system command to start the file transfer is entered from the keyboard as usual, without its terminating CR. It is assumed that the input-termination character is the CR. Then simultaneously press the escape and < keys to send a file or the escape and > keys to receive a file, followed by the TRSDOS file name, followed by CR. The escape-key sequence and the file name are not sent to the remote computer, but are used to open a TRSDOS file.

As soon as it receives the escape-key sequence, the program does a shift lock, so that the file name input is in upper-case, and calls READFN (line 05630) to read the file name. This input is accomplished using the system routine

"The remote system command to start the file transfer is entered from the keyboard as usual, without its terminating CR."

KBLINE, so all the usual TRS-80 input-editing characters may be used. For example, assuming that the command "type file name" lists a file at the terminal, the following transfers the remote file "myfile" to the TRSDOS file Myfile/TXT:

```
type myfile [ESC] > MYFILE/TXT [CR]
```

Frequently, an editor is used to receive a file from the TRS-80. For example:

```
edit myfile [CR]
input [ESC] < MYFILE/TXT [CR]
```

causes the TRSDOS file Myfile/TXT to be input to the remote file myfile. The Input command causes the editor to enter input mode.

Receiving a File

To receive a file, FILERX (line 03370) opens the TRSDOS file, sends off the terminating CR and waits for the start-of-file character. When this char-

HEY! JOE COMPUTER INC.!

BEAT THESE DISK DRIVE PRICES!

(It's impossible — and you darn well know it!)

TEAC "Slimline" — 1/2 the width of a regular minifloppy disk drive

	1 Drive with Power Supply & Cabinet	2 Drives in One Cabinet	Bare Drive
40 Track, Single Sided	\$219.95	\$399.95	\$179.95
40 Track, Double Sided	\$249.95	\$459.95	\$209.95
80 Track, Double Sided	\$299.95	\$559.95	\$259.95

NOW...BEAT THIS WARRANTY

1 YEAR

Our minifloppy disk drives will work on TRS-80 Models 1, 3, and 4, the IBM Personal Computer and the Radio Shack Color Computer. All drives for the Model 1, and the 3rd & 4th drive for the Models 3 & 4 require a power supply & cabinet and drive cable (\$29.95). The second drive for Models 3 & 4 is a bare drive. The first 2 drives for the IBM PC are bare drives; the 3rd and 4th drives require power supplies & cabinets. Color Computer disk drives require power supplies and cabinets. In addition, the 1st drive on a color computer requires a ROM pack & cable (\$169.95). The second drive for a Model III requires a power cable (\$10). If you have had your 1st drive on a Model 4 installed since you bought the Model 4, the second drive requires a power cable (\$10).

**Drive 0 Kit
for the Model 3
\$399**

*Complete with drive &
complete installation instructions*

Listing 5 continued

acter is received, the data following is saved for disk output in a 256-byte buffer FILBUF. When the buffer is full, it is written to disk with a call to DSKOP. All control characters except Tab and FF are discarded. Each character received that matches the end-of-record character is translated to CR, and added to the buffer. This cycle continues until the end-of-file character is received, or until you press the break key at which time the file closes and normal terminal operations resume.

Sending a File

Like FILERX, FILETX at line 04260 reads the TRSDOS file name and opens the file, which must exist. Each disk record is read into FILBUF. Before each logical record of data is sent, the remote prompt character must be received. A logical record is a block of data termi-

*"Once the file is sent,
control returns to normal
terminal operations."*

nated by CR. Once the prompt character is received, data is transmitted up to and including the next CR. This process continues until either end-of-file is encountered, or the break key is pressed on the keyboard.

Because many of the editors used to receive such a file treat a logical record consisting of a single CR as the signal to exit from input mode, a blank (X'20') is inserted between any consecutive CRs found in the file. Once the file is sent, control returns to normal terminal operations. At this point you must exit from input mode in the editor and issue whatever command is necessary to save your new file on the remote system.

Disk Operations

Because most TRS-80 disk I/O operations disable interrupts for a considerable length of time, it is necessary to guard against the possibility of losing data received during such operations. Therefore, the routine DSKOP (line 05490) performs all disk I/O. The address of the TRSDOS I/O routine is passed as a parameter.

Prior to performing the operation, FLOOFF is called to halt the incoming flow of data from the remote. Then the I/O operation is done, and FLOON is called to resume the flow of data, if necessary. It is essential that the remote sys-

M-ZAL

Release Two Is Here!

Our Users asked for it, and we made the best TRS-80 disk assembler even better! Now M-ZAL has:

- Recursive MACROS with full symbolic parameter substitution
- Conditional assembly with unlimited nesting
- Text Editor warm-start/recovery option
- Support for all popular source file formats
- Load Module inspect/superzap using LINKER

and the features that made it famous:

- True multi-pass assembly
- Full Screen Option Menus
- ENTRY/EXTERN symbols, relocation, and object module linking
- 8 character labels with sorted symbol table
- Built-in symbol table cross-reference
- Nested *INCLUDES (source file chaining/nesting)
- Lower case support (Model 3 only)
- Over 175 pages of documentation including Z-80 Technical Manual
- Full Screen Text Editing and much, much more!

M-ZAL provides a modular, structured development environment that makes programming your TRS-80 a truly enjoyable experience. Order yours today. (Requires 32k, 2 disk system)

#1050-10	Mod 1	\$149.00
#1250-10	Mod 3	\$149.00

CAU Development Software— The Professionals Choice:

Full Screen Text Editor for BASIC: we were the first to give the TRS-80 this indispensable ability! A must for every BASIC programmer:

#1210-20	Mod 1 & 3	\$29.95
----------	-----------	---------

T-ZAL: custom designed for the Model 3, this tape based assembler has many of M-ZAL's most desired features.

#1250-20	Mod 3 only	\$49.95
----------	------------	---------

XBUG: for machine language analysis and debugging—this tiny (2.5k) but powerful program lets you do it all!

#1020-10	Mod 1	\$19.95
#1220-10	Mod 3	\$19.95

FILEXFER: transfer any disk file between two TRS-80s. Use direct cable link or RS modems. Mod 1 and Mod 3 can be mixed. RS-232 and disk read.

#1040-10	Mod 1 and 3	\$49.95
----------	-------------	---------

"We've been using M-ZAL heavily for over two months now, and it's been worth its weight in gold."

Subscribe to **80 Micro** for one year and get our 1983 Special Anniversary Issue absolutely **FREE!**

You'll receive 12 months of **80 Micro**, the magazine packed with programs and projects for Radio Shack's personal, business, and portable computers. **80 Micro** gives you:

- user-application programs—written by readers like you who need programs to maximize the productivity of their machines.
- new-product reviews—information you need to make the right buying decisions.
- debugging techniques—**80 Micro** saves time with expert solutions to common and irregular problems.
- hardware modifications—upgrade your computer and become more familiar with its functions while you save money and increase its value.

Subscribe today.

And don't forget, with your subscription, **80 Micro** gives you a free, 1983 Anniversary Issue. This bonus thirteenth issue, published in January of 1983, is loaded with over 70 new articles on games, tutorials, utilities, programming techniques, plus Bill Barden's Assembly-Language Primer, 3-D Stereoscopic programs, a complete **80 Micro** annotated index, and more.

Yes! Send me a year's subscription
to **80 Micro** at \$35.97.

I understand that upon receipt of payment, I will
receive **80 Micro's** 1983 Special Anniversary Issue
absolutely FREE!

**"AUTHOR
AUTHOR!"**

The call for authors is out!

Wayne Green Books announces an October 1, 1983 deadline for submitting manuscript proposals for the upcoming publication list. Ideas for book-length manuscripts about any microcomputer system or area of electronics will be considered. In addition to payment and royalties, we offer our distribution channels and the marketing support your book deserves.

Send proposals or requests for a copy of our Writer's Guide to:

Editor, **Wayne Green Books**

Peterborough, NH 03458.

Or call toll-free 1-800-343-0722.

pbh frees your computer for other operations while our **"BASIC BUFFER"** manages your printer. **BASIC BUFFER** offers **64K** with **FIFO COPY** and **ERASE**. It comes complete with power supply and cables for most computers and printers. (Specify manufacturer and model number of both when ordering.)

A real value at **ONLY \$279.95** + shipping.

ATTENTION, CoCo OWNERS

Stop changing Printer & Modem Cables! Our **PARALLEL PRINTER INTERFACE** provides **SWITCH SELECTABLE PRINTER** or **MODEM** operations. It features switchable baud rates from 300 to 9600; comes complete with power supply, modem cable & **"CENTRONICS"** type printer cable.

Introductory Price **ONLY \$74.95** + shipping.

ENB

TRUE Relational Database Management for TRS - 80 Mod I/III

ENB is a true relational database manager. Your data is held in ordered sets. You impose structure by creating and linking sets in various ways. Prompt screens are automatically generated from this underlying structure. You define reports ordered by any set, showing directly or indirectly linked sets (and enforce a host of further conditions on the selected set members).

What's more, ENB has an integrated data dictionary; structural info is carried in the database as data, just like everything else. This lets you restructure your database at will, without reblocking or reprogramming, using the regular editing commands. Also, exchange files containing structural data with other ENB databases. Special reports on database structure are built in and (like all reports) are always current.

64K data items, spans 4 disk drives (or hard disk). Interfaces to BASIC, file exchange with Scripsit, VisiCalc and other ENB data bases. Includes 5 action tutorials, 150 page manual.

Developed in England by Southern Software.

You Owe It To Your Data!

CONVERT YOUR SERIAL PRINTER TO PARALLEL CONVERT YOUR PARALLEL PRINTER TO SERIAL

The UPI serial printer interfaces allow an ASCII serial printer to be connected to the parallel printer port of the TRS-80 computers or any other computer which has a Centronics compatible parallel printer port.

Software compatibility problems which normally result when a serial printer is used are totally eliminated because, the computer "thinks" that a parallel printer has been connected. Special driver programs and changes to the operating system are not required with computers designed to work with a parallel printer.

The UPI interfaces are completely self contained and ready to use. A D825 socket mates with the cable from your serial printer. The ribbon cable attaches to the parallel printer port of your computer. The UPI interfaces convert the output of your parallel printer port into serial data in both the RS232-C and 20 ma. loop formats. Switch selectable features include:

- Linefeed after Carriage Return
- Handshake polarity (RS232-C)
- Nulls after Carriage Return
- 7 or 8 Data Bits per word
- 1 or 2 Stop Bits per word
- Odd, Even, or, No Parity
- Baud rates 110 to 9600

UPI-3V8 for TRS-80 I & III	\$149.95
UPI-2VB for TRS-80 II & 16	\$149.95
UPI-3VB-6 for TRS-80 I & III with 6 ft. cable	\$159.95
UPI-2V8-6 for TRS-80 II & 16 with 6 ft. cable	\$159.95
Models for most other computers available at	\$159.95

NEW SERIAL TO PARALLEL INTERFACES

The SPC SERIAL to PARALLEL interfaces convert serial ASCII data into parallel format for use with Centronics type parallel printers. A DB25 socket accepts serial data from your computer. The 36 contact ribbon connector plugs into your parallel printer. Can be used to add a second parallel printer port to computers which reliably support both serial and parallel printers.

Switch selectable options include the following:

- 7 or 8 Data Bits per serial word
- Odd or Even parity for serial word
- Parity or No parity for serial word
- 1 or 2 Stop Bits per serial word
- 300, 600, 1200, 2400, or 4800 8AUD

SPC-1 as described above	\$89.95
SPC-CC with DIN plug and cable for the TRS-80 Color Computer	\$69.95

All prices U.S. funds. VISA, MASTER CARD, COD, Purchase Orders accepted from schools, major corporations, and government agencies. Shipping and Handling on U.S. orders \$4.00. Ten day return period. Ninety day warranty.

tem support the XON/XOFF protocol for the file transfer to work correctly. All TRSDOS error messages encountered as the result of disk I/O are displayed in full by calls to ERRDSP.

Program Listing 6

This last section of the program contains only data. Table 3 describes each variable and its function.

Building the Program

Since the program is assembled in six sections, it is necessary to create a single executable command file. Load the six separate command files with the Load command and use the Dump command to create the final module. Since the program is ORGed to start at X'5200', and the Dump command doesn't dump memory lower than X'6000', you must relocate the six parts first with the RELO command, and then use the RELO option of the Dump command, to relocate the final code to its original location.

The easiest way to accomplish this is with a Build command. Each of the six parts is relocated upward in memory by adding X'1E00' to its start address. The offset is then subtracted from the start address in the Dump command. Once EDTASM has been used to assemble each of the six parts of the program, the following sequence of commands creates the final command file.

```

RELO UT1/CMD (ADD=7030)
RELO UT2/CMD (ADD=72FA)
RELO UT3/CMD (ADD=745C)
RELO UT4/CMD (ADD=7520)
RELO UT5/CMD (ADD=79EA)
RELO UT6/CMD (ADD=7E25)
LOAD UT1/CMD
LOAD UT2/CMD
LOAD UT3/CMD
LOAD UT4/CMD
LOAD UT5/CMD
LOAD UT6/CMD
DUMP UTERM (START=7030,END=7E7A,
TRA=5230,RELO=5230)

```

Enhancements

Enhancements are always possible. If you need to have several different profiles available, you could pass the profile file name as a parameter to the program, rather than having a fixed name. The ability to display all control characters received in a visible format (transparency) is sometimes useful when communicating with an unknown system. Cursor addressing could be added to communicate with systems that support such a feature, although

the small screen size could make this impractical.

Additional code in the Intel-format loader could provide checks for load addresses outside of the bounds of available RAM, or for addresses that would overlay the loader program. I did not provide the ability to escape from the loader once it had started (by pressing the break key, for instance), so you might want to add that.

The file-transfer utilities do not send control characters, with the exception of Tab, FF, and CR. Remove this restriction if you want to move files containing such characters. However, you must be careful, since most interactive systems interpret some control characters as something other than data. XON and XOFF are good examples. Backspace is usually treated as the erase character. If you know which control characters cannot be sent as data, you can translate them to something else prior to sending them, or not send them at all.

The file transfer routines strip the parity bit from each character, making it impossible to send or receive any of the special graphics or space compression characters. If the system with which you are communicating can tolerate data with no parity, then you could remove this restriction as well.

Translate tables could be provided to translate each character received or sent. It would require an additional 512 bytes of memory for the two tables. The actual translation is easily implemented in the RS-232 transmit and receive routines, but the mechanism allowing the user to define the contents of the tables would be costly in terms of the code required. These tables would also be saved in the profile, requiring extra code to read and write them on disk.

You could add a number of special-function keys. These would be implemented by the escape sequence described in Listing 1 to generate a string of characters with two keystrokes. Again, such a feature is costly in terms of the amount of code and data area required.

My study of existing communications software for the TRS-80 convinced me that my software program functions as well as most packages costing in excess of \$100. If you tailor it to suit yourself, it should prove to be an adequate tool for most of your communications requirements. ■

Write to Douglas Payne at 56 Brenda-wood Crescent, Waterloo, Ontario N2J 4J5, Canada.

Name	Function
ESCHRS	Table of characters used by the escape sequence
TRMOPT	Start-of-terminal option variables which are saved in the profile.
FLAGS	Program flag byte
DUPLEX	Full duplex when set
ESCKBD	Last character typed was (ESC)
ESCLIN	Last character from RS-232 was (ESC)
XOFFTX	(XOFF) sent to RS-232
CRTX	Last character sent during file transfer was (CR)
XOFFRX	(XOFF) received
RSBAUD	Value output to baud rate generator port
RSTYPE	Value output to UART control/status port
BRKTIM	Value used by Delay routine to time the break signal
TABTBL	Table of tab stops
HSTSTF	Start-of-file character
HSTEOR	End-of-record character
HPROMP	Prompt character
HSTEOF	End-of-file character
DCB	Disk file DCB
IBUFI	Input buffer fill pointer
IBUFO	Input buffer extract pointer
IBUFC	Input buffer character count
SPSAVE	Stack pointer save area
IBUFF	RS-232 input buffer
IBUFE	End of input buffer
FILBUF	Disk file I/O buffer

398

SYSTEM II

The ultimate in business programing. A suite of programs written in machine language consisting of Stock Control, Sales Ledger, General Ledger, and Purchase Ledger. The sales ledger issues invoices in addition to statements.

All of the four parts of System II will integrate or may be used on their own. For instance, if the Sales Ledger and Stock Control are used as an integrated system, then issuing an invoice selling two widgets, will deduct those two widgets from stock.

Operator usage, particularly input technique, is made so simple that no training is needed. The operator and machine interaction is plainer - on one simple level - The ultimate in user friendliness.

Function changes are not made through a menu. In other words to change direction you do not have to go back to square one. The same or similar commands are used throughout the suite. If you do not know what to do, you can ask a built in utility to tell you what is available.

For a complete brochure on System II write or call today. Works on the Model I/III or 4

FAMILY TREE

Track down your pedigree with the fast and easy methods provided by FAMILY TREE, the exciting genealogy program. You may be surprised and enchanted by the interesting people you find at the roots of your own family.

It will store separate data for each particular relative, along with that persons mother and father, their sex, date of birth, Place of birth, date of marriage, place of marriage, date of death and place of death. With all of this information the computer can create many different reports such as: a list of descendants or ancestors children, siblings or even an entire family chart.

MODEL I/III tape or disk (32K)..... \$29.95

CHECK WRITER

This easy to use powerful utility, will take the tedium out of the time consuming task of writing checks, keeping records, and balancing your account. With 99 categories of expenses, sort in seconds on check #, amount, budget #, payee or date.

Great for businesses or home use. The printer program is written in basic for easy modification, while data entry and sorting are done through machine language subroutines.

DISK ONLY \$49.95

PASCAL

The ever popular programing language is brought to the TRS-80 complete in all standards.

We sell Pascal for \$49.95. As you will notice, this price is considerably lower than the competition. This is a very good version of Pascal. At this low price we hope to sell twice as many as the competition!

MOOEL I/III DISK \$49.95

SUPER SCRATCH PAD

SCRATCH PAD is the perfect combination of a data base manager and a word processor. Each screen becomes a page that you can easily flip through, each page has a title (one that you type in) that appears in the master menu, each title along with it's respective page can be sorted. There are 10 Macro Keys that can be defined for any letter, word, or sentence that you like. And talk about editing, SCRATCH PAD gives you screen editing features just like a full blown word processor. Its all machine language, menu drive - VERY easy to use.

DISK ONLY special intro price only \$39.95 (\$49.95 after October 1)

CYCLE INVOICE SYSTEM

Once each customer is entered, the system takes over, handling billing, recording payments, printing invoices, and all in all, making your life a lot easier. First of all, each customer can be billed weekly, bi-weekly, monthly, quarterly, semi-annual or on an annual schedule. Different invoice cycles can be mixed within the same file. A regular invoice amount is entered for each of these customers. Of course, an invoice adjustment amount can also be entered to allow for overdue charges, sur-charges, delinquent amounts, or credits.

This system is ideal for garbage routes, window washers, land lords, etc.

DISK ONLY \$149.00

SUPER DIRECTORY

SUPER DIRECTORY the fastest, most efficient library catalog utility on the market. SUPER DIRECTORY will sort your complete disk file in a matter of seconds on filespec, disk number, or remarks. It has super fast string search, Reads any normal dos and density, end many many more features.

MANUAL AND DISK \$49.95

DISKS ONLY \$1.79

We buy thousands of bulk disks each month for our own duplication and sales. We would like to offer these disks to you at tremendous savings. these are Super Quality disks guaranteed for life. If they ever go bad send them back and we will replace them FREE. Try some, if you don't like them return them.

100 DISKS TYVEK SLEEVES \$179.95

10 DISKS TYVEK SLEEVES \$19.95

JUMBO

You're in the cockpit of a Jumbo 747, preparing for a spectacular flight! As the one and only pilot, all controls will be in your hands.

Written by a professional programmer in conjunction with a B.O.A.C. pilot, JUMBO is most definitely the best flight simulation on the market. It's well done control and indicator board will allow you to feel the plane in motion.

So whether in the past you've flown or not (in the pilot's seat), you'll most definitely find JUMBO an adventure as well as a brilliant educational tool! (not protected).

MODEL I/III TAPE OR DISK **\$29.95**

LIBERATOR

Adventure, excitement, action, danger and even beautiful girls! Liberators got it all! This fantastic arcade game will get your heart pumpin and your mind moving!

1982's most popular arcade game, Donkey Kong, comes to life on your TRS-80 screen through the magic of John Cranes LIBERATOR! And if you thought Donkey Kong was fun, wait until you experience LIBERATOR's five separate screens (more than the arcade version) each utilizing the best sound and graphics possible!

MODEL I/III TAPE **\$19.95**/DISK **\$24.95**

ASSUALT

Strap yourself into the dimly lit ATV (All Terrain Vehicle), check the motor, the laser's, and visibility. Now prepare yourself for an underground trip that you won't soon forget... If you live! Assault is an original arcade game designed for the TRS-80 by Bill Dunlevy. It has some of the quickest and fastest graphics ever seen on a Model I/III. The game itself has spiders, little monsters, big monsters, underground caverns, bags of gold and more. It has over 20 different screens.

MODEL I/III TAPE **\$19.95**/DISK **\$24.95**

CYBORG

As a competitor in the famous Cyborg arena, you have access to live power sleds! You must now use these sleds to travel through the mazes and collect the signal modules. Of course there is nothing that pleases a crowd more than a little violence, so the makers of the arena have also installed guardian robots within its limits! Using your shield, you must destroy them while trying desperately to complete your task. Cyborg has a total of five different levels, each much more challenging than the one before. Now CYBORG comes unprotected.

MODEL I/III TAPE **\$22.95**/DISK **\$25.95**

CLASH

Once again, one of the markets most creative programmers, Bill Dunlevy has created CLASH, a fantastic new arcade simulation! Mounted upon your great white winged stallion, prepare yourself for a clash within the arena. This day, you will be competing against famous riders from all over the planet. As the tournament begins, there is a frenzie of flapping wings and bucking horses, but finally all riders are airborne and the contest has begun. With a firm grasp on the reins, maneuver your horse above the others and then descend upon them. You must dismount the other riders, before their skill prevails and they dismount you.

MODEL I/III TAPE **\$19.95**/DISK **\$24.95**

DIG OUT

UH OH! The wackiest game to ever hit an arcade is now invading your computer! As the game begins, you'll find yourself amidst tons of rock and earth. You must dig your way through the surrounding tunnels and hunt down the deadly monsters. But watch out!!! As the hunter, you just might become the hunted. The monsters are strangely powerful, their touch can destroy and their eggs can obliterate. Besides all this, the underground is their natural habitat. DIG-OUT is truly another COMPUTER SHACK classic. In each of its fifteen different levels, DIG-OUT combines the best sound, fantastic graphics, and above all, exciting action.

MODEL I/III TAPE **\$19.95**/DISK **\$21.95**

CONVOY

From the creators of DEMON SEED comes a great new game that promises to keep you on the edge of your seat... CONVOY!!

A convoy of trucks has been assigned to move food rations for the troops in the field, but what about the enemy? You must protect the convoy, utilizing the fire power of the armies new super tank, from enemy fighter planes and helicopters seeking to block and destroy the convoy. As planes come rocketing down, destroy their bombs and send them to the ground in flames.

MODEL I/III TAPE **\$22.95**/DISK **\$25.95**

FURY

Written by the twice acclaimed Doug Frayer (co-author of Cyborg and Jovian), FURY combines strategy and quick nerves with its three totally different screens. Fury takes you beyond the traditional computer arcade space fight. Allowing one or two players, sound and graphics are used to their utmost and the disk version even talks!

MODEL I/III TAPE **\$22.95**/DISK **\$25.95**

MOON ROVER

Moon Rover is an exciting game played on the moons surface. In your Rover you must shoot down enemy aircraft jump over wide meteorite holes and rescue your countrymen from certain death. Moon Rover has super graphics and with its many levels of play will never get boring. Moon Rover should become one of your favorite games.

MODEL I/III TAPE **\$22.95**/DISK **\$25.95**

STRONGHOLD

Ken Olson and Larry Chow

In Stronghold you have four cities that have built mobile energy shields that'll repel the bombs bouncing around the planet. With all the skill you can muster, protect your city by moving your two shields and stopping the bombs from hitting your city.

One or two player action with sound and split second graphics that'll amaze the eye and ear. That's STRONGHOLD, try it you'll enjoy it!

MODEL I/III TAPE **\$22.95**/DISK **\$25.95**

GAUNTLET

One of my favorite games. Operating a super tank you must destroy the enemy. Every building is a barricade every street a battlefield, can you even hope to defeat the hordes of alien tanks? Very fast graphics and exciting sound make this game a must for any arcade game player.

CU-124

Mod II File Transfer Utility

by J.H. Nestor

I think computer disk files breed secretly at night. In the darkened security of my computer room, snug within their paper covers, they multiply. ASCII files marry object code files, big files beget little files. First two, then four. They have no shame.

A fantasy nightmare? Maybe. But the contents of my briefcase make this scenario plausible. I've collected a mass of disks, each with its own family of files.

It seems that no matter how carefully I plan things, the files I need are always on another disk. I can't recall how many times I've typed the Copy and Move commands and then waited in vain for those files to be moved.

The problem is less severe with CP/M and Oasis operating systems,

If you're tired of moving Model II files, you'll find this transfer utility indispensable.

which permit flexible wildcarding of commands. For example, the CP/M command `PIP B:=A:ACCT?.*` sends the files `ACCT1`, `ACCT1.BAS`, `ACCT2.FOR`, and `ACCT9.DAT` to Drive B.

TRSDOS 2.0 added a limited wildcard capability to some of their commands. For example, the command

`MOVE */BAS:0 TO :1` transfers all files with the extension `/BAS` from drive zero to drive 1.

The wildcard also works on the other side of the equation. Thus, the command: `MOVE MYPROG/*:0 TO :1` is valid. This command copies any file with the name `MYPROG`, regardless of its extension.

The addition of the wildcard to TRSDOS 2.0 was an improvement, but it is still not the answer to my file-moving woes. It is not uncommon for me to move a list of two dozen files, none of which meets the wildcard parameters. My solution was to write a Model II file move utility.

The Program

The Transfer program lets you type a list of files to be moved from one disk to another. You can examine the list, correct any errors, and then leave while the file transfer takes place.

I could use the Build command to create a Do file with all of the Copy filename/ext:drivespec to filename/ext:drivespec data for each file to be copied, but that requires a lot of typing. Besides, the Build command is slow and cumbersome.

The Transfer Program

The solution is simple. I wrote a program that creates a Do file, executes it, and then erases it. Well, almost...

The first priority of Transfer is to minimize typing. Why retype the source and destination drive numbers each time? Transfer prompts for these numbers (see Fig. 1) and uses them in every command line. It also inserts COPY and TO in the command (see Fig. 2).

You are asked to enter a list of the file names to be copied. Pressing enter in

```

TRANSFER—File Copy Utility
Enter SOURCE Drive Number.....0
Enter DESTINATION Drive Number....1

Enter File name # 1 or [ENTER] to end list .....SAMPLE/TXT
Enter File name # 2 or [ENTER] to end list .....TRANSFER/BAS
Enter File name # 3 or [ENTER] to end list .....BASCOM
Enter File name # 4 or [ENTER] to end list .....P66/MAC
Enter File name # 5 or [ENTER] to end list .....[ENTER]
Are there any corrections (Y/N)? N
    
```

response to the prompt ends the list. Once it is completed, you can reenter any of the file names in case a mistake was made.

Transfer takes the file names and creates a command such as: COPY MYPROG/ASM:0 TO :1. This command is written to the Do file. When the Do file is completed, you can execute the commands or abort the operation.

How Transfer Works

There are five components to the Transfer program.

The first, Enter Transfer Drives (in lines 11030-11060), clears the screen, prints a heading, and accepts the source and destination drive numbers. String variables D1\$ and D2\$ are used for the drive numbers.

The second, Enter Filenames (in lines 11080-11130), contains the routine to enter the file names. They are entered into the string array A\$(). The array is dimensioned to 100 elements in line 10070, which is actually overkill since TRSDOS accepts only 96 file names including system files. Line 11100 tests the length of the file name entered. Pressing enter without entering a file name produces A\$(A%) with a length of zero, thus ending the entry routine.

The third part of the program, in lines 12000-12140, lets you correct any file name you might have mistyped. Answer Y to the prompt "Are there any corrections (Y/N)?". Enter the offending line number, and reenter the correct file name for that line.

The fourth part builds the Do file. While it should be the easiest part of the

program, it isn't. I examined a typical Do file and found it to be an ASCII sequential file. When I tried using an editor to create a Do file of the same format, it didn't work. When I issued the command DO MYFILE, TRSDOS responded with error 31, file not found. I checked the directory, and there it was, MYFILE: record length of 1, 87 records long. When I used the TRSDOS Build command to enter the same commands, it worked.

Apparently, the Build file does a special kind of write to the TRSDOS directory when creating a Do file. That could be why it is so slow.

First, I use Build to create a Do file called DOCOPY. The file consists of one statement: CLS. Typing DO DOCOPY clears the screen, and creates a properly designated entry in the TRSDOS directory. To be sure I didn't accidentally erase this precious file, I used the ATTRIB function to give it a password. The command was: ATTRIB DOCOPY (ACC=JHN UPD=JHN PROT=EXEC), and the file is now DOCOPY.JHN.

To append DOCOPY.JHN, the fifth Transfer component, open the file in line 16030 for sequential output. Then write the command strings created in lines 16010-16080 to the file using the statement in line 16090.

When it didn't work, I examined the file DOCOPY.JHN and found that some sort of control character was written into the single CLS statement.

I added program lines 15040 and 16040: line 15040 reads in the first line from DOCOPY.JHN and line 16040 writes it back as the first line of the new file. Whatever was in the file is still there, and it now works.

I mentioned that the program changes the Do file when it is executed; it reuses the same file each time it's used. The OPEN O command in line 15030 erases the existing file when the updated version is written, so that there is only one DOCOPY.JHN file on my disk at any one time.

The fifth part of the program executes or aborts the operation.

There are probably other uses for this method of building and executing a Do file of TRSDOS commands. I plan to explore them as time permits. Perhaps you could even construct a form of Job Control Language. If you find applications for the concept, I would appreciate hearing from you. ■

Dr. J.H. Nestor lives at 39114 Rte. 303, Grafton, OH 44044.

Portable Word Processor

by Thomas Hartmann

For anyone who does a lot of writing, word processing is a major boon. A major drawback is the lack of portability of most word-processing systems.

There are a few portable computers around, but try working on an airplane with an Osborne in your lap—without a power source. You might as well be carrying a briefcase full of bricks.

There is a way, though, to combine portability and word-processing capabilities. By interfacing a Sony Typecorder with your Model III, you can have the best of both worlds. That procedure is described here.

Be prepared for the moment when inspiration strikes; carry your word processor with you.

The Typecorder is a small (11 1/8 by 1 3/4 by 8 5/8 inches) and lightweight (3 lbs., 1 oz.) electronic typewriter of sorts. It's actually a dedicated micro-

computer, ROM-equipped to provide a single function—word processing. It has 2K RAM and uses a 40-character liquid crystal display (LCD). Your copy is saved on microcassettes a page at a time, a page being about 30 lines. A single microcassette stores 100 pages of text.

The machine provides a variety of word-processing functions, with dedicated keys for character and word insertion or deletion, and scrolling through a document. You can edit on a page-by-page basis, saving each page on the cassette.

Probably the most exciting feature of the machine, aside from its light weight, thin profile, and versatility, is the fact that its keyboard feels like a conventional typewriter keyboard. The keys are spaced similarly to TRS-80 and other standard keyboards, and emit a faint click when touched. They have just enough of a spring to make them comfortable.

The only differences are the locations of the left shift key (one key over from where it is on the TRS-80), and the apostrophe key (next to the semicolon, as on IBM typewriters). I found these both to be rather inconsequential considerations; my fingers easily adjusted to the slight change.

There's a special display status mode on the Typecorder that locates most documents on the tape without too much trouble and also displays error messages. You can adjust tabs, margins, and the volume of the key clicks from the keyboard.

An unusual feature of the Type-

Character	Word	Suffix	Character	Word	Suffix

T	that	tion	%	percent	
U	united	ugh	°	cent	

Table 1. Basic steno character assignment.

corder originally designed for secretaries and stenographers, but with a little practice usable by anyone, are the Steno keys. These keys, located on either side of the space bar, automatically convert a symbol to a word, or generate suffixes or entire words with a single keystroke.

For example, to type the word "people" you would touch the letter P and hit the Steno key. Instantly the word "people" appears on the display. Each letter has a reserved word that is displayed if that single letter is printed followed by the Steno key.

To produce a suffix, simply type the word without the suffix—for example, "victimiz," and press the Steno key. The word is instantly transformed into "victimization."

Printing a number and then touching the Steno key spells out that number on the screen. This can be done with the words hundred, thousand, million, dollar, percent, and cent. A listing of the Steno key character assignment is shown in Table I.

The typewriter operates for about five hours on a set of batteries, two or three hours if they're rechargeable NiCads. There's also a rechargeable battery pack available from Sony, as

well as 110-volt ac and 12-volt dc power supplies.

I've used the basic 6-volt dc Universal Battery Eliminator available from Radio Shack to power my Typewriter when I lie in bed in the evening and write. The advantage of the Radio Shack unit is that you can reverse the tip polarity, and the Typewriter uses a negative tip and positive ring, the opposite of most battery eliminators. When traveling, I carry two sets of NiCads and a charger/power supply.

To really make use of the Typewriter, you need some way of getting hardcopy. Sony provides three options: their OA-J1110 Communications/Printer Interface, used to interface the Typewriter with the TRS-80, the Sony Compact Printer, and the Sony Electric Typewriter Actuator.

I haven't used the Compact Printer or the Electric Typewriter Actuator that sits over an IBM or other standard typewriter and strikes the keys, so it's difficult to comment on them. Given the proliferation of inexpensive printers on the market, neither appeared to me to be a good buy for the money (the printer is priced over \$800).

The OA-J1110 Communications/Printer Interface gives you QUME-

compatible printer output, an RS-232C Serial output, and a built-in power supply. This device is necessary to connect the Typewriter to the TRS-80, or to send data along modem lines or to serial printers.

Using the Typewriter and Model III Together

Using the Typewriter with the Model III requires some way of getting the data in through the RS-232C port so that it can be saved as a file. There are probably a number of communications and terminal packages designed to use with modems that do this; I've found one of the most versatile, and one ideally suited to the Typewriter, to be Lance Miklus' ST80III.

This program works so well because it's possible to create specific configuration data bases that tell the program to ignore or modify certain incoming signals. Because the Typewriter sends out a string of control codes containing page numbers and other information that isn't accepted by the Model III, you get some strange screen changes as data is accepted through the serial port with a standard terminal package.

To set up the ST80III, run the Basic program, Tconv/BAS, that comes on

TIME SAVING — MONEY SAVING
PRINTER BUFFER

SPOOL-Z-Q

SPOOL-Z-Q accepts characters at computer speed and feeds them to your printer at its much slower speed. This eliminates the time you waste waiting for your printer to finish before you can use your computer.

FEATURES

SPOOL-Z-Q is perfect for use with all parallel (Centronics standard) printers including Radio Shack printers. SPOOL-Z-Q is stand-alone, it doesn't steal power from the computer or printer. The many advanced features include automatic internal space character compression, copy and self-test functions, and a special "Pause-on-Formfeed" mode.

SIZES AND EXPANSION

SPOOL-Z-Q comes in 32K, 64K, and 128K character sizes. Any SPOOL-Z-Q can be user expanded to 64 or 128K by just plugging in chips — the sockets are already installed. There are no jumpers to fool with either, SPOOL-Z-Q knows how much memory is installed without being told.

15 DAY TRIAL PERIOD

You may try SPOOL-Z-Q with your system and, if you aren't completely satisfied, return it within 15 days for a no-hassle full refund.

the ST80III disk. From the menu, go to the Change Video Translation Table and change it so it's set up as in Table 2. From the main menu, save this new translation table with the name Sony/TBL onto the disk with your ST80III/CMD program.

To run the entire system, first write a document on your Typecorder. My first experiment was a 20,000-word sci-fi novella that was great fun. I did it on the train between my home in New Hampshire and my office in New York City, over the course of about three weeks. I'd suggest you set the right margin at 63 on the Typecorder, as this makes things easier later on (the maximum margin on the TRS-80 is 63).

Then, hook the communications interface up to the RS-232C port on the Model III. Plug the cables from the interface into the Typecorder and rewind the tape to the beginning of your document. Touch the play button to load the first page of your document into the Typecorder's RAM.

On the TRS-80, type "ST80III SONY" from TRSDOS. The terminal package loads and accesses your new translation table. Open the memory buffer by performing a TEC "C" command and, if you want the copy to go to

```
05 ENQ = 00 Null
06 ACK = 00 NULL
09 Tab = 00 Null
0A Line Feed = 00 Null
0C Form Feed = 00 Null
0D Return = 20 SPACE
10 DLE = 00 Null
12 DC2 = 00 Nul
14 DC4 = 00 Null
17 ETB = 00 Null
1A Sub = 00 Null
1B Escape = 00 Null
1C FS = 00 Null
1E RS = 00 Null
1F US = 00 NULL
```

Table 2. Video Translation Table for the ST80III package to create the Sony/TBL file.

your printer simultaneously, a TEC "P" command.

Hold down the Code button on the Typecorder and touch either the Y or X key. Code Y sends the entire document, page after page, to the TRS-80. Code X sends only one page at a time.

The Typecorder displays "IN COMMUNICATION" and the screen of your TRS-80 should busily scroll with the document you transferred from the Typecorder tape. After about 15 pages

are loaded (if your document is that long—the display of the Typecorder tells you which page you're on), it's a good idea to break the text with the Typecorder's Reset button and save the file, because this is approaching Scripsit's memory limit on a 48K machine.

Save the file by executing a TEC "X" to close the memory buffer, and a TEC "F" to prompt you for a file name and write the file to disk. Then, you can go back to a TEC "C" to begin with a new file and a clean buffer to load the rest of your document.

The last step is to go to Scripsit or some other word-processing program and edit the document. I've been using Scriplus, a useful modification to Scripsit.

You'll notice when you load the document that at the end of each line is a forced line feed symbol. This occurs because each line on the Typecorder requires a forced line feed. For many applications this presents no problem. I prefer to have more flexibility in formatting my printouts, however, so, after setting my right margin on the screen at 63 with a "Break: W=63" command, I simply run through the document laying a space on top of (replacing) each line feed, except those at the ends of paragraphs. This takes about 25 minutes for a 20,000-character file, and also presents a good opportunity to do some editing and review.

I could have configured the ST80III to ignore all the line feeds, but then I'd have to go back over the document and locate all paragraph beginnings to insert a line feed. I tried this, and it was too confusing, so I settled on the above procedure.

Summary

Anyone who uses a typewriter more than 10 or 15 hours a week and also travels will probably find that the Typecorder/Model III combination is hard to beat. It's versatile, portable, easy to use, and relatively uncomplicated.

Now I can write in bed, on the train or plane, in the car, sitting outside on a sunny afternoon, or anywhere the spirit moves me. If you write for a living or as a hobby, and have the money to spend on a new toy, you can't beat the combination and quality of the Sony Typecorder in concert with a Model III. ■

80 micro BOOK SHELF

THE PERSONAL COMPUTER BOOK—Peter A. McWilliams. You've read all about personal computers and you're not quite sure what they are. This book has the answers to your questions. It's funny, and you'll get a kick out of reading it, but you'll learn what personal computers are, what they can do, and what they cost. There are chapters on programming, word processing, business, games, education, kids and computers. You'll also find out what computers cannot do and how to figure out if you need one. A special name-brand buying guide presents detailed information on the most popular models and some you may not have heard of to help you select a system. You won't find a lot of jargon or technical information that's way over your head. You'll find an amusing and informational introduction to personal computers. BK1279 \$9.95

THE WORD PROCESSING BOOK A Short Course in Computer Literacy—Peter A. McWilliams. If you've heard about "word processing" and have no idea what that means, Peter A. McWilliams tells you all about it. Even if you know nothing at all about computers, this book sheds some light on word processing in a humorous and informative fashion. The book has three sections—What Word Processing Computers Are and What They Do, The Uses of Word Processing Computers, Selecting and Purchasing a Word Processing Computer. Topics include an introduction to computers, word processing for school, business, writers, the self-employed, selecting a word processing computer, deciding if a word processor is right for you, and the disadvantages of word processing. A special feature is the name brand buying guide, which gives evaluations of some of the most popular personal computers, printers, and word processing software. BK1278 \$9.95

40 COMPUTER GAMES FROM KILOBAUD MICROCOMPUTING—Forty games in all in nine different categories. Games for large and small systems, and even a section on calculator games. Many versions of BASIC used and a wide variety of systems represented. A must for the serious computer gamesman. BK7381 \$7.95

INTRODUCTORY/GAMES

DON'T (or How to Care for Your Computer)—by Rodney Zaks. In plain language, with numerous illustrations, this book tells all the do's and don't's of the care, preservation and correct operation of the small computer system. Specific chapters cover each piece of hardware and software, as well as safety and security precautions and help for problem situations. Have your computer work right the first time and keep it working. No technical background required. For all computer users. BK1237 \$11.95

YOUR FIRST COMPUTER—by Rodney Zaks. Whether you are using a computer, thinking about using one or considering purchasing one, this book is indispensable. It explains what a computer system is, what it can do, how it works and how to select various components and peripheral units. It is written in everyday language and contains invaluable information for the novice and the experienced programmer. (The first edition of this book was published under the title "An Introduction to Personal and Business Computing.") BK1191 \$8.95

MICROPROCESSOR INTERFACING TECHNIQUES—by Austin Lesca & Rodney Zaks—will teach you how to interconnect a complete system and interface it to all the usual peripherals. It covers hardware and software skills and techniques, including the use and design of model buses such as the IEEE 488 or S-100. BK1037 \$18.95

CAPTAIN 80 BOOK OF BASIC ADVENTURES—by Robert Liddell. This book contains 18 of the most popular Adventure programs available today; all in one easy-to-read book with listings ready to be keyed in to your computer. This unique book also contains an ADVENTURE GENERATOR program, not available from any other source. This generator program will actually write another BASIC ADVENTURE PROGRAM! Although specifically written for the TRS-80 Model I & III these programs are adaptable to other computers using Microsoft BASIC. BK 1240 \$19.95

COMPUTERS FOR EVERYONE 2nd Edition—by Jerry Willis and Mert Miller. This new, updated edition shows you how computers can be used in your home, office or school. It explains what computers can do and features a consumer's guide of the more popular computers to help you decide which one to buy and who to buy it from. There's even a chapter devoted to software that describes over 100 programs currently available. Also included are chapters on peripherals, telecommunications and computers in education. Abounds with colorful photographs. BK1260 \$5.95

A USER GUIDE TO THE UNIX SYSTEM by Jean Yates and Rebecca Thomas. Here at last is a clearly written book that allows you to use the Unix operating system easily, and at a fraction of the time it previously took. If you're using, evaluating or simply curious about this system, this is your book. BK1242 \$17.95

WORDSTAR MADE EASY by Walter A. Ettlin. Now WordStar is as simple to learn as it is easy to use. This book teaches WordStar in 14 easy lessons, saving hours of hard work. It comes with a convenient pull-out Command Card. BK1239 \$12.95

INTRODUCTION TO WORD PROCESSING by Hal Glatzer. This book explains in plain language what a word processor can do, how to use one, how it improves productivity—especially in businesses that handle lots of words—and how to buy one wisely. No technical knowledge required, for all first-time users and those considering purchasing a word processor. BK1238 \$12.95

WAYNE GREEN BOOKS

THE SELECTRIC INTERFACE—by George Young. You need the quality print that a daisy wheel printer provides but the thought of buying one makes your wallet wilt. SELECTRIC INTERFACE, a step-by-step guide to interfacing an IBM Selectric I/O Writer to your microcomputer, will give you that quality at a fraction of the price. George Young, co-author of *Kilobaud Microcomputing* magazine's popular "Kilobaud Klassroom" series, offers a low-cost alternative to buying a daisy wheel printer. SELECTRIC INTERFACE includes: step-by-step instructions, tips on purchasing a used Selectric, information on various Selectric models, including the 2740, 2980, and Dura 1041, driver software for 280, 8080, and 6502 chips, tips on interfacing techniques. With SELECTRIC INTERFACE and some background in electronics, you can have a high-quality, low-cost, letter-quality printer. Petals not included. BK7388 (125 pages) \$12.97

COMPUTER CARNIVAL—by Richard Ramella. Your child can become a crackjack computerist with the sixty TRS-80 Level II programs in **COMPUTER CARNIVAL**. This large-type, spiral bound book for beginners is a veritable funhouse of games, graphics, quizzes and puzzles. Written by 80 Micro columnist Richard Ramella, the programs are challenging enough to ensure continued learning, yet short enough to provide your child with the immediate delight and reward of mastering basic computing skills. And for even greater enjoyment, get the **CARNIVAL COMPANION**, a 30-minute cassette containing all the programs in the book. Eliminates tiresome typing and lets your child spend more time enjoying the programs. BK7389 \$16.97 CC7389 Book and Cassette \$24.97

TEXTEDIT—A Complete Word Processing System in Kit Form—by Irwin Rappaport. TEXTEDIT is an inexpensive word processor that you can adapt to suit your differing needs—from form letters to lengthy texts. Written in TRS-80 Disk BASIC, the system consists of several modules, permitting the loading and use of only those portions needed. A disk is also available which provides the direct loading of the modules; however, the book is required for documentation. For Model I and III with TRSDOS CONVERT, one disk drive (2 disk drives or copy utility needed to transfer to system disk). Runs under TRSDOS 2.2/2.3. May not function under other systems. BK7387 \$9.97 Disk DK7387 \$19.97

KILOBAUD KLASROOM—by George Young and Peter Stark. Learning electronics theory without practice isn't easy. And it's no fun to build an electronics project that you can't use. *Kilobaud Klassroom*, the popular series first published in *Kilobaud Microcomputing*, combines theory with practice. This is a practical course in digital electronics. It starts out with very simple electronics projects, and by the end of the course you'll construct your own working microcomputer!

Authors Young and Stark are experienced teachers, and their approach is simple and direct. Whether you're learning at home or in the classroom, this book provides you with a solid background in electronics—and you'll own a computer that you built yourself! BK7386 \$14.95

THE NEW WEATHER SATELLITE HANDBOOK—by Dr. Ralph E. Taggart W8BDOT. Here is the completely updated and revised edition of the best-selling *Weather Satellite Handbook*—containing all the information on the most sophisticated and effective spacecraft now in orbit. Dr. Taggart has written this book to serve both the experienced amateur satellite enthusiast and the newcomer. This book is an introduction to satellite watching, that tells you how to construct a complete and highly effective ground station. Not just ideas, but solid hardware designs and all the instructions necessary to operate the equipment are included. An entire chapter is devoted to microcomputers and the Weather Satellite Station, and for the thousands of experimenters who are operating stations. *The New Weather Satellite Handbook* details all the procedures necessary to follow the current spacecraft, Weather Satellite contains Operation Satellite Systems, Antenna Systems, Weather Satellite Receivers, A Cathode Ray Tube (CRT) Monitor for Satellite Picture Display, A Direct-Printing Facsimile System for Weather Satellite Display, How to Find the Satellite, Test Equipment, Microcomputers and the Weather Satellite Station, Station Operations. BK7383 \$8.95

ANNOTATED BASIC—A NEW TECHNIQUE FOR NEOPHYTES—BASIC programming was supposed to be simple—a beginner's programming language which was so near to English that it could be easily understood. But, in recent years, BASIC has become much more powerful and therefore much more difficult to read and understand. BASIC simply isn't basic anymore.

Annotated BASIC explains the complexities of modern BASIC. It includes complete TRS-80 Level II BASIC programs that you can use. Each program is annotated to explain in step-by-step fashion the workings of the program. Programs are flowcharted to assist you in following the operational sequence. And—each chapter includes a description of the new concepts which have been introduced.

Annotated BASIC deals with the hows and whys of TRS-80 BASIC programming. How is a program put together? Why is it written that way? By observing the programs and following the annotation, you can develop new techniques to use in your own programs—or modify commercial programs for your specific use. *Annotated BASIC Volume 1* BK7384 \$10.95 *Annotated BASIC Volume 2* BK7385 \$10.95 Order Both Volumes and Save! BK738402 \$18.95

* Use the order card in this magazine or itemize your order on a separate piece of paper and mail to: 80 Micro Book Department • Peterborough NH 03458. Be sure to include check or detailed credit card information. No C.O.D. orders accepted. \$1.50 for the first book, \$1.00 each additional book for U.S. delivery and foreign surface. For foreign airmail \$10.00 per book. Please allow 4-6 weeks for delivery. Questions regarding your order? Please write to Customer Service at the above address.

MOD III ROM COMMENTED

TRS-80 DISK & OTHER MYSTERIES

MACHINE LANGUAGE DISK I/O AND OTHER MYSTERIES—by Mike Wagner. The purpose of this book is to inform anyone familiar with Z-80 assembly language programming how to control the TRS-80 Model I and III disk drive interrupt systems. Driver routines for every function described, with abundant examples, are included in this book. It also covers utilization of TRSDOS assembly language file I/O calls and techniques. BK1258 \$29.95

MOD III ROM COMMENTED—Soft-Sector marketing, 1981. This book is not an instruction course on machine language, but rather an information source that you can use time and time again for writing your own program or patching old Mod III machine language programs. It contains an explanation of ROMs in the latest machine from Tandy, with most every location of the 14K ROMs listed, with comments. BK1235 \$22.50.

THE CUSTOM TRS-80 AND OTHER MYSTERIES—by Dennis Kitz. More than 300 pages of TRS-80 customizing information. With this book you'll be able to explore your computer like never before. Want to turn an 8 track into a mass storage unit? Individual reverse characters? Replace the BASIC ROMs? Make Music? High speed, reverse video, Level I and Level II? Fix it if it breaks down? All this and much, much more. Even if you have never used a soldering iron or read a circuit diagram, this book will teach you how! This is the definitive guide to customizing your 80! BK1218 \$29.95.*

BASIC FASTER AND BETTER AND OTHER MYSTERIES—by Lewis Rosenfelder. You don't have to learn assembly language to make your programs run fast. With the dozens of programming tricks and techniques in this book you can sort at high speed, swap screens in the twinkling of an eye, write INKEY routines that people think are in assembly language and add your own commands to BASIC. Find out how to write elegant code that makes your BASIC really hum, and explore the power of USR calls. BK1221 \$29.95.*

THE CP/M HANDBOOK (with MP/M)—by Rodney Zaks. A complete guide and reference handbook for CP/M—the industry standard in operating systems. Step-by-step instruction for everything from turning on the system and inserting the diskette to correct user discipline and remedial action for problem situations. This also includes a complete discussion of all versions of CP/M up to and including 2.2, MP/M and CCOS. BK1187 \$14.95.*

MASTERING CP/M—by Alan R. Miller. For advanced CP/M users or systems programmers who want maximum use of the CP/M operating system, this book takes up where the CP/M Handbook leaves off. It will give you an in-depth understanding of the CP/M modules such as CCP (Console Command Processor), BIOS (Basic Input/Output System), and BDOS (Basic Disk Operating System). It explains the incorporation of additional peripherals to the system, console I/O, the use of the file control block and much more. It also includes a library of useful macros and a comprehensive set of appendices. BK1263 \$16.95

DOS RANDOM ACCESS & BASIC FILE HANDLING—By H.J. Muller. This book was written for the nonprogrammer. It is ideal for the businessman or professional who needs to solve and write special programs for in-house business problems, or the hobbyist who wants to go beyond the cassette recorder and into disk storage and file manipulation. It is written as a self-instruction tutorial and will provide anyone with some Level II experience with the ability to write special programs for inventories, mailing list, work scheduling, record keeping, research project data manipulation, etc. 150 pages. BK1236 \$29.50

TRS-80 DISK AND OTHER MYSTERIES—by Harvard C. Pennington. This is the definitive work on the TRS-80 Model I disk system. It is full of detailed "How-to" information with examples, samples and in-depth explanations suitable for beginners and professionals alike. The recovery of one lost file is worth the price alone. BK1181 \$22.50.*

MICROSOFT BASIC DECODED AND OTHER MYSTERIES—by James Earvour. From the company that brought you TRS-80 DISK AND OTHER MYSTERIES. Contains more than 8500 lines of comments for the disassembled Level II ROMs, six additional chapters describing every BASIC subroutine, with assembly language routines showing how to use them. Flow charts for all major routines showing how to use them. Flow charts for all major routines give the reader a real insight into how the interpreter works. BK1186 \$29.50.*

HOW TO MAKE MONEY WITH COMPUTERS—In 10 information-packed chapters, Jerry Feisen describes more than 30 computer-related, money-making, high profit, low capital investment opportunities. BK1003 \$15.00.*

SMALL COMPUTERS FOR THE SMALL BUSINESSMAN—By Nicholas Rosa and Sharon Rosa. Here is an excellent guide for businessmen who are interested in finding out what a computer can do for their business, but are not interested in becoming "computer nuts." The authors are consultants who assess the computer needs of businessmen and who touch base with everything necessary to consider before purchasing a computer. The authors tell readers how and where to shop successfully for a computer; what to expect their computer to do for them; how large a computer to consider; how to select software; whether or not to use a consultant; how to introduce the computer to the staff, and much more. Specific topics addressed include accounting records, warehousing, light factory operation and parts inventories. BK1223 \$12.95*

SO YOU ARE THINKING ABOUT A SMALL BUSINESS COMPUTER—By Richard G. Canning and Nancy C. Leeper. For a well-organized manual on the process of selecting the right computer system for your small business, this text can't be excelled. Designed to introduce the novice in data and word processing to the real benefits of computerization, the book is filled with money- and time-saving tips, photos of equipment, lists of suppliers, prices, explanations of computer terminology, and helpful references to additional sources of information. Everyone contemplating a first computer installation should have this book. BK1222 \$14.00*

*Use the order card in this magazine or itemize your order on a separate piece of paper and mail to: 80 Micro Book Department • Peterborough NH 03458. Be sure to include check or detailed credit card information. No C.O.D. orders accepted. \$1.50 for the first book, \$1.00 each additional book for U.S. delivery and foreign surface. For foreign airmail \$10.00 per book. Please allow 4-6 weeks for delivery. Questions regarding your order? Please write to Customer Service at the above address.

80 micro BOOK SHELF

TRS-80 DATA COMMUNICATIONS SYSTEMS—by Frank J. Dertler. If you are interested in using the TRS-80 as a terminal or message system, this is the book to buy. It covers communications, technical material, software and hardware for the entire TRS-80 family of machines. BK1245 \$12.95

MODEL III TRSDOS COMMENTED—Published by Soft Sector Marketing. This book is intended to show moderately experienced programmers the organization and inner workings of a typical Z-80 disk operating system. Every function of the operating system has been decoded and explained, not to bit-by-bit detail, which would be a monstrous task, but rather at an instruction-by-instruction level. Many not-documented features of the system have been found, as well as a few errors. The techniques shown in the system coding will be useful as a guide to programmers interested in systems programming at an assembler level. BK1257 \$29.95

INSIDE SUPER UTILITY PLUS—by Paul Welner. This book really explains all the mysteries and functions of that remarkable program—Super Utility Plus. This is an excellent tutorial on TRS-80 disks. It contains detailed instructions for recovering bad disks using Super Utility Plus, and also documents previously undocumented features of SUP. This is an excellent companion book to the Super Utility Plus manual. BK1269 \$19.95

TRSDOS 2.3 DECODED AND OTHER MYSTERIES—by James Less Farvour. This book is intended to guide the beginning or experienced system programmer through the internal operations of the TRSDOS operating system used on the Radio Shack Model I computer. A knowledge of basic computer architecture and assembly language programming is assumed, however the significant features of both are presented in the text. An absolute must-have for Model I owners! BK1276 \$29.95

USING MICROCOMPUTERS IN BUSINESS—By Stan Velt. Written by the owner/manager of one of the country's largest computer stores selling systems to small businesses, this book is an essential background briefing for any purchaser of microcomputer systems or software. In a fast-moving style, without the usual buzz words and technical jargon, Velt answers the most often asked questions. CONTENTS: How a computer can help your business; Data base management to advance your business; Effective use of word processing; How to use a computer without disrupting your business; Buying your system; Computer languages; What are the limitations of the microcomputer; Software: where to find it, how to judge it; What to do when the computer goes down. BK1225 \$9.95*

BUSINESS SYSTEM BUYER'S GUIDE—By Adam Osborne with Steven Cook. When you enter the market place of small business computers, you face a bewildering array of products, prices, features and fables. This guide cuts through the jargon and unravels the task of buying the right computer system. This book provides solid information on how to determine your needs, how to choose software and hardware for all business applications, what to expect from vendors, what to avoid, and what questions you must ask. It also provides a wealth of detailed information on products, manufacturers, retailers and the whole microcomputer market. BK1229 \$9.95

80 micro BOOK SHELF

Z80

INSIDE LEVEL II—For machine language programmers. This is a comprehensive reference guide to the Level II ROMs, allowing easy utilization of the sophisticated routines they contain. It concisely explains set-ups, calling sequences, variable passage and I/O routines. Part II presents an entirely new composite program structure which unloads under the SYSTEM command and executes in both BASIC and machine code with the speed and efficiency of a compiler. Special consideration is given to disk systems. BK1183 \$15.95.

Z-80 ASSEMBLY LANGUAGE PROGRAMMING—by Lance A. Leventhal. This book thoroughly covers the Z-80 instruction set, abounding in simple programming examples illustrating software development concepts and actual assembly language usage. Features include Z-80 I/O devices and interfacing methods, assembler conventions, and comparisons with 8080A/8085 instruction sets and interrupt structure. BK1177 \$18.95.

TRS-80 ASSEMBLY LANGUAGE—by Hubert S. Howe, Jr. This book incorporates into a single volume all the pertinent facts and information you need to know to program and enjoy the TRS-80. Included are clear presentations of all introductory concepts, completely tested practical programs and subroutines, details of ROM and RAM and disk operating systems, plus comprehensive tables, charts and appendices. Suitable for the first time user or more experienced users. BK1217 \$9.95.

PROGRAMMING THE Z-80—by Rodnay Zaks. Here is assembly language programming for the Z-80 presented as a progressive, step-by-step course. This book is both an educational text and a self-contained reference book, useful to both the beginning and the experienced programmer who wish to learn about the Z-80. Exercises to test the reader are included. BK1122 \$16.95.

*Use the order card in this magazine or itemize your order on a separate piece of paper and mail to: 80 Micro Book Department • Peterborough NH 03458. Be sure to include check or detailed credit card information. No C.O.D. orders accepted. \$1.50 for the first book, \$1.00 each additional book for U.S. delivery and foreign surface. For foreign airmail \$10.00 per book. Please allow 4-6 weeks for delivery. Questions regarding your order? Please write to Customer Service at the above address.

PROGRAMMING • 6809

TRS-80 COLOR BASIC—Bob Albrecht. Learn how to use the unique color, sound and graphics of the TRS-80 Color Computer. This self-teaching guide uses a learn-as-you-play format to teach Color BASIC. Packed with games, experiments, programming problems, and solutions, it is an ideal introduction for children, teachers, and adults. It starts with simple concepts and takes you on to more complicated games, graphics, and activities, including many chances for you to try out your newly learned programming skills. Included is an entire chapter on programming problems, which offers tips on adapting to Microsoft BASIC on other personal computers. BK1280 \$10.95.

PROGRAMMING THE 6809—by Rodnay Zaks and William Labiak. This book explains how to program the 6809 in assembly language, covering all aspects progressively and systematically: basic programming techniques and devices, application examples, data structures, and program development. No prior programming knowledge is required. BK1264 \$15.95.

TRS-80 COLOR COMPUTER GRAPHICS—by Don Inman with DYMEX. This exciting book will enable you to explore all the graphics capabilities of Extended Color BASIC. You'll learn how to create interesting graphics to enhance your own computer programs. Also included are application programs and subroutines that will be invaluable when you begin writing your own graphics programs. Each chapter ends with a summary and practice exercises. BK1266 \$14.95.

ASSEMBLY LANGUAGE GRAPHICS FOR THE TRS-80 COLOR COMPUTER—by Don Inman and Kurt Inman with DYMEX. This dynamic new book uses sound and graphics to show you how 6809 assembly language can be used to perform tasks that would be difficult or impossible with BASIC. All of the techniques are explained in a hands-on approach. Learn how to tailor your own programming style, from editing, assembling, executing and even debugging, to making your own programs run quickly and efficiently. It is also packed with video screen diagrams which explain each step of the process of creating your own graphics. BK1277 \$??.

6809 MICROCOMPUTER PROGRAMMING AND INTERFACING—by Andrew C. Stauegard, Jr. Getting involved with Tandy's new Color Computer? If so, this new book from the Blacksburg Group will allow you to exploit the awesome power of the machine's 6809 microprocessor. Detailed information on processor architecture, addressing modes, register operation, data movement, arithmetic logic operations, I/O and interfacing is provided, as well as a review section at the end of each chapter. Four appendices are included covering the 6809 instruction set, specification sheets of the 6809 family of processors, other 6800 series equipment and the 6809/6821 Peripheral Interface Adapter. This book is a must for the serious Color Computer owner. BK1215 \$13.95.

Nanos System REFERENCE CARDS

FOR MODELS I, II, III, COLOR AND POCKET COMPUTERS!

At last! No more flipping through the pages of the BASIC manual! No more working through the maze of machine language instructions! These cards completely summarize the BASIC and Assembler manuals! **FEATURES INCLUDE:**

memory map, eyeball graphics, math instructions, BASIC commands, store instructions, BASIC functions, load instructions, BASIC statements, move instructions, special keys, exchange instructions, PRINT USING examples, shift instructions, BASIC special characters, compare instructions, BASIC and assembler messages and codes, branch instructions, BASIC facts, data alteration instructions, reserved words, I/O instructions, ROM routines, complete character chart with graphics and space-compression codes, hex-dec chart, control code cross-reference, assembler instructions, commands and operators, screen line layout, editor commands and subcommands, condition code easy access.

Plus—"magic graphics number"—a mystery until you learn how to use it!

Designed as a fold-up, accordion-style card, fits in your pocket. Panels organized for optimum speed for reference.

Model I: BASIC and Assembler FC1002	\$4.95
Model II: BASIC and Assembler FC1005	\$5.95
Model II: Commands and Utilities FC1010	\$3.95
Model III: BASIC and Assembler FC1005	\$5.95

Apple II and Apple II Plus: BASIC only FC1007	\$3.95

BASIC & PASCAL

LEARNING TRS-80 BASIC—by David A. Lien. Dr. Lien, who is the author of THE BASIC HANDBOOK and the original Radio Shack LEVEL I USER'S MANUAL, has compiled a tutorial which includes portions of the original USER'S MANUAL, and most of LEARNING LEVEL II along with extensive additions. It will completely cover the TRS-80 Models I, II, III, and 16 (sorry, not the color or pocket computers). It is, of course, written in the easy learning style which readers of Dr. Lien's books have come to enjoy. BK1175 \$19.95.

THE BASIC HANDBOOK—SECOND EDITION—by David Lien. This book is unique. It is a virtual ENCYCLOPEDIA of BASIC. While not favoring one computer over another, it explains over 250 BASIC words, how to use them and alternate strategies. If a computer does not possess the capabilities of a needed or specified word, there are often ways to accomplish the same function by using another word or combination of words. That's where the HANDBOOK comes in. It helps you get the most from your computer, be it a "bottom-of-the-line" micro or an oversized monster. BK1174 \$19.95.

PROGRAMMING IN PASCAL—by Peter Grogono. The computer programming language PASCAL was the first language to embody in a coherent way the concepts of structured programming, which has been defined by Edsger Dijkstra and C.A.R. Hoare. As such, it is a landmark in the development of programming languages. PASCAL was developed by Niklaus Wirth in Zurich; it is derived from the language ALGOL 60 but is more powerful and easier to use. PASCAL is now widely accepted as a useful language that can be efficiently implemented, and as an excellent teaching tool. It does not assume knowledge of any other programming language and therefore suitable for an introductory course. BK1140 \$12.95.

INTRODUCTION TO PASCAL—By Rodnay Zaks. A step-by-step introduction for anyone wanting to learn the language quickly and completely. Each concept is explained simply and in a logical order. All features of the language are presented in a clear, easy-to-understand format with exercises to test the reader at the end of each chapter. It describes both standard PASCAL and UCSD PASCAL, the most widely used dialect for small computers. No computer or programming experience is necessary. BK1189 \$16.95.

Dealers SELL

Selling 80 Micro will make money for you. Consider the facts:

Fact #1: Selling 80 Micro increases store traffic—our dealers tell us that 80 Micro is the hottest-selling computer magazine on the newsstands.

Fact #2: There is a direct correlation between store traffic and sales—increase the number of people coming through your door and you'll increase sales.

Fact #3: Fact #1 + Fact #2 = INCREASED SALES, which means more money for you. And that's a fact.

For information on selling 80 Micro, call 800-343-0728 and speak with Ginnie Boudrieau, our bulk sales manager. Or write to her at 80 Micro, 80 Pine St., Peterborough, NH 03458.

SUPDUP 3.0¹

Duplicate SU+² in STANDARD /CMD format. No need for expensive backup disks!

- Keep a SU+ backup on your system disk — always ready when you need it!
- Enter SU+ with high memory unaltered! Pass data back and forth between SU+ and other programs. Load a high memory monitor and jump to it after SU+ loads!
- No machine language knowledge required! SUPDUP does all the work!
- Works with SU+ versions 2.2z, 2.2P, 3.1 and 3.1a!

If you own Super Utility Plus² you need SUPDUP 3.0¹!

- SUPDUP 3.0¹ is provided on unprotected disk with users manual for the Model I or III.

Model 100 Conversions:

Easy as I, II, III

by Beve Woodbury
80 Micro Technical Editor

You can convert many Model I, II, and III programs for the Model 100 with few modifications. In fact, some programs don't require any changes. This article will help you choose and convert programs appropriate for the Model 100.

What to Avoid

Avoid programs that require direct access (disk) file input and output. As of now, the 100 offers only sequential file input and output. Since Model 100 programs and files are stored within the computer, your 100's memory size limits the size of the programs and files you can use.

Also avoid programs that use POKES and PEEKs. If you're not familiar with machine language and the Model 100's memory map, these commands may give you some strange results.

Finally, avoid programs that require large screen displays such as game graphics. You can alter screen displays for the Model 100 providing you keep in mind the limitations imposed by the 40-character by 8-line display. Change any Print@ statements in your conversion so that it prints at the correct location on your 100.

A Sample Program

Math Program is a Model I/II/III program that I converted to run on the Model 100 as a conversion example (see Program Listing I).

Once you boot up the program, enter your name and choose from a menu to add, subtract, multiply, divide, or quit. When you choose the function you want, you're given the option of Level 1 (for numbers 0-9) or Level 2 (for numbers 0-100).

The program uses random numbers in the math problems. It prints the problem on the screen and waits for your answer. If you answer correctly, the computer tells you so; if you're wrong, the screen displays WRONG along with the correct answer.

When you quit the program, it reads an input sequential file to see if your name exists in the file. If it does, the program

prints the scores you achieved last time along with your current scores. Scores are calculated for each math function as well as overall.

Your current scores replace your old scores on the output sequential file or, if you aren't already on the file, the program adds your name and scores to the end of the output file.

Establishing Files

Prior to running Math Program on any TRS-80, you must enter Basic with two files and an established sequential input file.

On Models I/II/III, enter Basic by typing BASIC - F:2. To establish the sequential input file for Math Program, type in:

```
OPEN "O",1,"SCORES":CLOSE
```

and press the enter key.

On the Model 100, the command Maxfile=2 in line 10 opens the Basic file channels. Enter the text mode to establish the sequential input file. When the screen prints "File to edit?", type SCORES, press the enter key, and then press the Model 100's F8 key.

You only need to establish the Scores file before the program's first run or when the Scores file has been killed.

Model 100 Math Program Changes

Program Listing 2 is Math Program converted for the Model 100. Compare the two programs. I'll explain what changes were made and why. I have kept the line numbers the same in both programs for easy comparison.

Remark Statements

Remark statements, indicated by REM or an apostrophe, help you understand and debug a program. They illustrate the program's flow, explain what's being done in certain areas of the program, and help locate problem areas. Remarks also define a particularly confusing or unusual command area.

Each character or space in a remark statement takes up 1 byte of memory. Because of the Model 100's memory limitation, it is advisable to remove all spaces and remark statements from the program. But you should keep a printed copy of the complete program for future reference in making changes, debugging, or understanding program flow.

GOTO and GOSUB Statements

Programmers sometimes have GOTO or GOSUB statements reference a remark statement that explains a routine that follows. When you remove REM lines, be sure to change the line number in any GOTO or GOSUB statement that references, the deleted remark line number to the correct number. See program lines 390 and 810. If you miss one of these corrections, you'll get an undefined line error (UL).

Altering the Display Command

Print @ statements require the most changes (see lines 290-360 in Listing I). You have to modify print locations from a

The Key Box

"Model 100 Conversions: Easy as I, II, III" applies to any Model 100. "Disassembler," "Elapsed Time," and "If It's Tuesday..." all require 8K RAM.

64-character by 16-line format (Model I/III) or an 80-character by 23-line format (Model II) to the Model 100's format. Map the necessary changes by plotting the print locations on the 100's screen graph paper (p. 210 in the Model 100 manual) or by trial and error. The 100's screen limitation may make many programs unusable or unpleasant when converted.

If you have many lines of print that don't fit on the eight lines available, you'll want to control the speed of the screen scroll. You can accomplish this with For . . . Next loops every eight lines. I prefer to use an INKEY\$ routine (line 270) that allows the user to go to the next screen at his own rate by pressing any key.

Opening Files

Model 100 commands to open files are different from those

S	Difference in subtraction
SR	Total of correct subtractions
SW	Total of wrong subtractions
T	Total of problems attempted

Table 1. Math Program variable list.

of the other TRS-80s (lines 770 and 780). These commands must appear as shown in Listing 2. Spaces can be inserted between words if desired. Refer to p. 165 in the Model 100 manual for a more detailed explanation of opening files.

Random Numbers

The Model 100's random number generator returns numbers between 0 and 1. Therefore, all random numbers are decimal numbers to 14 places. The program produces whole numbers by multiplying the decimal numbers generated (line 1520 in Listing 2).

The random numbers are not truly random, however, as the same number sequence is generated each time a program runs. The Model 100 manual provides a short program on p. 175 that ties the random number generator to real time. This produces a different number sequence for each program execution (lines 1500-1510 in Listing 2).

Other Conversion Problems

I am aware of two other problems not demonstrated in Math Program. You must include the Then in an If... Then... GOSUB statement. You cannot use If... GOSUB as you can on the Model III. But in an If... Then... GOTO statement, either the Then or the GOTO can be left out.

Character strings (CHR\$) 32-125 are the same on all TRS-80s. Any other character string may or may not be different on the 100 and must be checked carefully to determine the appropriate CHR\$ command for the Model 100.

More Changes?

This covers the changes I've found necessary in converting programs to the Model 100. Give it a try and if you come across any others, let me know about them and I'll include them in a future issue. ■

Disassembler

by David Cloutier

Soon after I got my Model 100, I tried to map its ROM and RAM. I downloaded the two disassemblers on CompuServe to do so, but both were too large to run on an 8K machine. So, I had to write my own program (see Program Listing 3).

Run Listing 3 and enter the memory location you wish to examine. You must enter the location in decimal format. Originally, I wrote the program so you could enter it in either decimal or hexadecimal, but, to conserve memory, I had to remove the subroutine that provided this option.

If your machine has more than 8K, you can reinsert this option by changing line 12520 to:

```
12520 INPUT "Start address (suffix with H if hex)";SS
```

and adding the lines in Fig. 1.

After the memory location you're interested in is mapped, press the R key to enter another memory location. Or, press the Q key to end the program.

One problem with this disassembler is its length. If you have an 8K machine, you'll probably have to remove all other files in memory or save them to tape. Between each mnemonic and its operand is a tab—there are no spaces.

When the program first runs, it arrives at memory location

```

7D33. This isn't surprising since the first command in memory is JP 7D33. When the program reaches locations 7D37-7D3D, it tests for a time delay. If the check comes back negative, the program sends some numbers to port D3.

As it continues through memory, the disassembler eventually arrives at 7EE1. This subroutine tests the memory size by getting the value of the first memory location of a chip and then complementing the value and loading it back into memory. If a read finds the number is the complement of the original, the memory is RAM and the program checks for any remaining RAM chips (see "Monitor 100," 80 Micro, July 1983, p. 178 for a memory map).

If the test fails or if all the chips are accounted for, the program loads the beginning location of all RAM into FAC0.

The subroutine 5A7C copies the default labels from ROM into RAM locations F789-F809. Call 6C93 makes a copy of F789-F809 and puts it into F80A-F88A. Call 6C9C does the reverse—it copies the label line in F80A-F88A to F789-F809.

Call OFE8 retrieves the character in the memory location HL points to; if the character is lowercase, the call converts it to uppercase and returns with the new character in the HL register pair.

Call 2542 is similar to the Z80 command LDIR. It takes the block pointed to by the HL register (block length in register B) and moves it to the memory pointed to by the DE register. ■

Elapsed Time

by Richard Ramella

The Model 100 command PRINT TIMES\$ displays the current time in 24-hour, military format, but the time is embedded in a data string and can't be easily substituted in mathematical equations. Elapsed Time (Program Listing 4) solves this problem by letting you use the enter key to mark start and end times of a program and telling you how much time passes between the two.

I used Elapsed Time as a subroutine in programs. It's helpful when I'm trying to pare the running time of a new program, but it can time any event that lasts fewer than 24 hours. The program has various applications, but since the machine

only states times to the second, it isn't useful for timing events that require split-second accuracy.

The program calculates the hours, minutes, and seconds of start and end times, stores them in separate number variables, and then subtracts the start time from the end time. Remember that the decimal system is not useful when working in 60-second, 60-minute, and 24-hour units.

Running the Program

The program begins with this prompt: "To start, tap enter." Hitting the enter key sets the start time. Another prompt then appears: "Timing has begun. To end, tap enter." This second tap stops the program timer. Then the start time, the end time, and the elapsed time are given in this format: 2 hours 23 minutes 1 second.

How It Works

Lines 150 and 200 set A\$(1) and A\$(2) as start and end times. The For . . . Next loop in lines 240-280 isolates the hour, minute, and second totals of the start and end times and assigns their variable values. This is done using the LEFT\$, MID\$, and RIGHT\$ string commands to isolate the correct two characters for hours, minutes, and seconds, then transforming these into numbers with the VAL command.

Here's an example of how this works:

```
10 Z$="4"
20 W=VAL(Z$)
30 PRINT W
```

Line 30 produces the number 4, which is subject to normal mathematical computation on the computer. This example won't work if, for instance, line 10 reads Z\$="four".

The reverse of this process is STR\$:

```
10 W=4
20 Z$=STR$(4)
30 PRINT Z$
```

Line 30 prints a 4 again, but it's a string 4 and subject to string variable rules.

Elapsed Time changes parts of a string into numbers. These numbers are dealt with in lines 330-380. I won't explain all these lines, but I'll translate one.

In effect, line 330 (in Listing 4) says: If the start- and end-seconds numbers are equal, zero seconds is the answer, so go to the next line. If the end number is higher than the start number, the number of elapsed seconds is the end number minus the start number. The only other possibility is that the start number is bigger than the end number, so the elapsed time number for seconds has to be 60 seconds minus the start number plus the end number. If this is the case, you must borrow the 60 seconds from the minute number.

The minute and hour figures are handled in roughly the same manner. Lines 360-370 print the elapsed time. If no hours or minutes have passed, the program doesn't print "0 hours 0 minutes." But, Elapsed Time does pay attention to plurals and adds an S to the words hour, minute, and second if needed.

In using this routine as a timer for a program in progress, I include program lines to set the value of A\$(1) as the timed routine begins and to set the value of A\$(2) when it is complete. Then I send the test to lines 240-380; the lines in Elapsed

Time are renumbered higher than the lines at the end of the program being timed, so no significant overlap exists. Once the elapsed time is stated, you can go back to the timed program to try to shorten its run time. ■

Conversion by Mare-Anne Jarvela
80 Micro Technical Editor

You may have noticed that your corner liquor store stocks your favorite brands in half-liters instead of those familiar fifths and pints. And it's just as likely that the local service station now dispenses gas in liters rather than gallons. Despite these minor concessions to metric conversion, the United States, for the most part, stands apart in a world of kilometers, liters, and grams.

But if travel or business takes you abroad, or even across the border to Canada or Mexico, you may need to convert

U.S. measurements and currency into metric equivalents and foreign monies and back again. Conv.BA does all the hard work (see Program Listing 5).

Measurement Conversions

After boot-up, the program displays the menu shown in Fig. 2. If you choose option 1 or 2, conversions between U.S. and metric measurements, a new menu appears and you choose the conversion you want to make (see Fig. 3). For example, you can convert inches to centimeters or liters to gallons.

After this, enter the number you want converted and the answer appears on the screen. You can then return to the main menu for another conversion.

Currency Conversion

If you select Foreign Currency from the main menu, a submenu displays two options: to convert U.S. dollars into foreign currency or vice versa.

If you choose to convert U.S. dollars to a foreign currency, the program displays seven countries and their monetary denominations in parentheses (see Fig. 4). Select the country/currency of interest.

After you select the exchange, the program prompts you for

```
1. U.S. STANDARD→METRIC
2. METRIC→U.S. STANDARD
3. FOREIGN CURRENCY
ENTER 1, 2 OR 3?
```

Figure 2. Conv.BA's main menu.

```
1. FAHRENHEIT TO CELSIUS
2. INCHES TO CENTIMETERS
3. FEET TO METERS
4. MILES TO KILOMETERS
5. OUNCES TO GRAMS
6. POUNDS TO KILOGRAMS
7. GALLONS TO LITERS
ENTER NUMBER OF CONVERSION?
```

Figure 3. Menu to convert U.S. measurements to foreign measurements.

```
1. CANADA (DOLLAR)
2. BRITAIN (POUND)
3. FRANCE (FRANC)
4. MEXICO (PESO)
5. W. GERMANY (MARK)
6. SPAIN (PESETA)
7. JAPAN (YEN)
ENTER NUMBER OF CURRENCY?
```

Figure 4. Currency conversion options.

the current currency exchange rate. For instance, if you wanted to convert dollars into French currency, the program asks you the exchange rate for one franc. You'll find exchange rates in the financial section of your local newspaper or *The Wall Street Journal* under the heading "U.S. \$ Equivalents."

When you enter the exchange rate, the program prompts for the number of dollars you want converted. When the answer appears, you can return to the main menu.

If you want to convert foreign currency to U.S. dollars, you would choose option 2 from the submenu. When you choose the currency to which you want your dollar figure converted, the program prompts, "What is the current exchange rate for one U.S. dollar?" Again, this information is found in your newspaper's financial section, under "Currency per U.S. \$." Enter the appropriate number, then enter the number of dollars you want converted and your answer appears on the display.

If for any reason you want to change the calculations for figuring out the currency, alter lines 1040 and 1100.

Bon Voyage

Have fun converting and don't leave home without your Model 100. Hopefully this program will help you the next time you buy gas by the liter at a German service station. ■

Still Up in the Air

by Eric Grevstad
80 Micro News Editor

From the moment Radio Shack introduced the Model 100, people have considered the portable a suitable seat-mate for plane trips. After three months on the market, the 100 has logged a lot of flying time, but still hasn't earned its official license.

Hundreds of owners use their micros, with and without asking permission, on commercial flights. A few ask for permission and are turned down, though, as far as anyone knows, no planes have suffered instrumentation interference or near-disaster as a result of airborne computing. Past that, users waiting for an authoritative yes or no on the 100's airworthiness are still waiting.

As reported in *80 Micro* (July 1983, p. 169), Federal Administration Aviation rule 91-19 outlaws all electric devices except hearing aids, pacemakers, tape recorders, and shavers—unless an airline chooses to allow them. From Model 100 owners' chats on CompuServe, there's no doubt that many airlines are tolerating the 100.

The bulletin board contains dozens of messages like E. Brad Meyer's: "Took Northwest Flight 287 from Boston to Chicago today. Asked permission to use the 100, received it, and used the machine intermittently throughout the flight, including during the final approach. No problems reported."

InfoWorld gave two pages of its June 20 issue to a rather giddy article by Bob Loudon of Palo Alto, CA, who played with his new Model 100 from San Francisco to New York and back: "Years ago, a friend told me that you aren't a real success in this country until the stewardesses always stop by to say 'Hello,'" Loudon wrote. "You can achieve the same effect with a Model 100, at least until everybody else has one."

Besides impressing flight attendants, Loudon pointed

out an advantage of CMOS RAM over magnetic media: "The Model 100 has now been X-rayed twice by the airlines, with no loss of memory," he wrote.

On his way home, Loudon used the portable's Basic and sound routines to write a program that played five octaves of music in whole, half, quarter, and eighth notes—presumably trying the patience of people sitting nearby, but apparently causing no harm to the plane's communication and navigation equipment.

According to John Revelle of Rohnert Park, CA, the first rule of Model 100 air travel is to notify the flight crew of its use: "Although the rule is a federal one and the authority is supposed to be with the airline, the actual final word rests with the captain," wrote Revelle in a letter to *80 Micro*.

Meanwhile, Radio Shack is trying to end the uncertainty by collecting owners' reports and offering test 100s to airlines. Said director of computer merchandising Ed Juge, "I don't think there's been any official word yet. The only cases I've heard of someone not using the 100 or being stopped from using it were on USAir. There were a couple of incidents of the stewardess acting on her own, saying 'It's a rule that you can't have personal computers on the plane.'"

"It doesn't look like there's a major problem at all," Juge said. "It's just a matter of history and of accumulating evidence to tell the airlines that people have used it, with the captain's permission, and there've been no problems."

"We're in contact with several airlines, all of whom have been offered units for testing; we've made some inroads with them and will possibly be contacting some more," Juge said of Radio Shack's requests for a definite all-clear. "We're trying to work within the existing law; we're not trying to go to the FAA and get a new law. And the existing law states that it's up to the airlines and the individual captains." ■

THE REST OF 80

IT HAD TO GO SOMEWHERE

There's no reason to deprive you of solid microcomputing information just because it wouldn't fit between the covers of 80 Micro. But even 80, as thick as it is, can hold just so much. Here's the answer—**The Rest of 80**—31 of the best tutorials and utilities, hand-picked from the overflowing files at 80 Micro. These never-before-published articles for the Model I and Model III were just too good to let them get away.

SOMETHING FOR EVERYONE

Whatever your programming skills, **The Rest of 80** can help you learn more and save time and effort. Here are just a few of the chapters you'll find:

An Unlistable, Unbreakable Program
Adding Commands to BASIC
Programming in Tiny Pascal
Line Drawing
Automatic Master Disk Directory
Faster Loading for the Model I
ASCII Converter

A Better LDOS KSM
And more on BASIC,

Pascal, and assembly language! Every program is of the same high quality you wait for every month in 80 Micro. Now try **The Rest of 80**—a welcome addition to your computer library.

ISBN 0-88006-062-X, softcover with spiral binding, 7 x 9, approx. 300 pp. BK7392 \$9.97

NEWS THIS MONTH

The Shack's software future

Model 4 gets CP/M, but IBM gets the limelight.

Generalizations about the computer market have a half-life of approximately eight hours, but—in the absence of Peanut, Popcorn, Lisa, and McIntosh—the micro scene of mid-1983 made room for three definite hot properties.

One was the portable computer, with Radio Shack's Model 100 setting the pace; another was the inexpensive home micro, with more powerful machines like the Commodore 64 and the Coleco Adam replacing Timexes and VICs. The third was the IBM PC, attracting flocks of work-alike hardware and compatible software manufacturers.

The PC's success has overshadowed Tandy's Model 4. For years, the naysayers' view was that the TRS-80 was stuck with an orphan operating system, that TRSDOS was a software sideline compared to the 8-bit standard, CP/M. Now the Model 4 is getting, after half a year's postponement, the latest CP/M 3.0—just as software companies are rushing to 16-bit PC-DOS and MS-DOS products. The Model 4 may not be an orphan, but it seems IBM has the biggest family.

Has Radio Shack gone from a DOS dead-end to a hardware dead-end? Microsoft Corp., proud of its Model 100 software and Model 16 Xenix operating system, is maintaining a hands-off attitude toward the rest of the line: "The Model 4 is an 8-bit system, therefore Microsoft doesn't have anything to offer it in the way of an operating system," said public relations director Pam Edstrom.

Microsoft is enjoying immense success in the 16-bit world. The firm's MS-DOS is arguably the single-user stan-

Some of today's best sellers may come to the Model 4.

dard—even Digital Research Inc. has decided to offer its language products on MS-DOS as well as its own CP/M-86.

As for the multi-user Xenix system, which Microsoft licensed to Radio Shack for the Model 16, Edstrom says, "I guess I'd credit Radio Shack to some

extent for having Xenix take off and build some momentum. When Radio Shack, which is one of the major OEMs in the market—and this was the first time Radio Shack had gone outside for an operating system—picks a product, that reassures people it's going to be around for some time."

Radio Shack "went outside" for its alternate Model III operating system, LDOS; Tracy Licklider, vice president of operations for Software Arts of Cambridge, MA, saw LDOS—in Model III mode—playing a sizable role on the Model 4.

"I think that the Model 4 will do fairly well," Licklider said. "I think there's going to be a market for machines of that capability for some time. I think Radio Shack sees it as an upgrade of the Model I/III, analogous to Apple's beefing up the II into the IIe.

"In terms of software, I think it will help somewhat that they have CP/M on the 4, but I think enough of the mainstream applications will be under LDOS in Model III mode or TRSDOS 6.0. I think it'll have the main spread of applications."

Licklider praised the Model 4 as "a very well-priced machine," saying its 64K, two-drive model (\$1,999) compares favorably with the Apple IIe—"There're no color graphics, but for lots of applications such as VisiCalc or word processing you don't need graphics." His one reservation concerned a missing language:

"I think it's sad there's no Logo on it, even a black-and-white one. I understand the Model III has been very popular as a school machine, and Logo would seem a natural thing to have, but I guess the low-resolution graphics prohibited that."

Licklider admitted that the 4 isn't likely to attract state-of-the-art programs: "As for new major innovative software under TRSDOS, I think not; that'll probably be 16-bit or MS-DOS material. But the 4 represents a reasonable market. We have done VisiCalc under TRSDOS 6.0, and, though I can't yet say anything definitely, there's lots of interest in it as a TK!Solver machine."

Bill Hogue, president of Big Five Software, was more pessimistic about Tandy's prospects. Big Five, the company behind such classic TRS-80 games as *Galaxy Invasion* and *Cosmic Fighter*, makes its new bestseller, *Miner 2049er*, exclusively for Atari micros.

"I'm pretty worried about the TRS-80 market," Hogue said. "We have officially left it, though we're still selling some of our older games. If we hadn't come out with our Atari game at the time we did, we probably would have gone out of business. If we'd come

out with a TRS-80 game at the time, we would have gone out of business.

"I've talked to other people and they've told me that nobody's buying TRS-80 software, that sales are down. A lot of stores in my area that used to sell it, as well as Apple and Atari programs, have discontinued it.

"I don't think Radio Shack is going to go bankrupt or anything like that," Hogue said. "But I think they're a little bit behind in technology. I never did like their Color Computer. I heard they were coming out with a new one, and I just saw that toy [the MC-10] they made, and I hope that isn't it."

As a game designer, Hogue prefers Atari's ROMpack capability: "Cartridge is the only place to be. We can put our games on that and piracy's almost eliminated." Asked whether the Model 4's CP/M will boost Radio Shack sales, he said, "No way. The way you make your money is mostly in the games market; that's the home market. Ask the average person who's bought a computer and he doesn't know what CP/M is."

Outside of games, though, CP/M should increase the Model 4 software library. George Tate, president of Ashton-Tate, said "The TRSDOS market is something we haven't been involved with, so I haven't paid much attention to it." Asked whether his firm's dBase II would appear on Model 4 CP/M, however, Tate replied, "Oh, yeah, absolutely. There isn't question one about that."

Can Tandy stay competitive with IBM? "Tandy certainly has their own market. They have a lot of retail stores, and they can be competitive with anyone they choose," Tate said. "And they've shown an ability to do some surprising things, like come out with the Model 100, which I think is a great machine.

"If you look at the market of Radio Shack over time, it's a market that's been almost immune to outside compe-

tition," Tate pointed out. "Most everything that's been sold for them has been sold through Radio Shack stores. I don't think it's a dead end at all."

The consensus that CP/M will mean access to many current, if not brand-new, programs, while new software will come primarily from Radio Shack, was accepted by Ed Juge, Tandy's director of computer merchandising.

"I think there's a lot of CP/M stuff out there," Juge told *80 Micro*. "Now whether we're going to spark a whole rush of new software for the 4, I doubt it. I don't think anybody goes into using the CP/M system with the idea that anybody's going to come out with a lot of new material. You do it to use existing software.

"We don't have any intention of bringing out software under the CP/M system. It's there for the people that want to use CP/M, or the people who want to support it. We believe TRSDOS is pretty locked in now. We've got 50 to 60 people on the phone using it and answering questions, and I don't want to have to hire another 50 or 60 people."

There will, Juge confirmed, be new TRSDOS 6.0 software from Radio Shack. "Probably the first things will be Scripsit and SuperScripsit in 80-column format. There'll be a new Cobol accounting package. That's overdue now, as is CP/M—we thought we'd have CP/M from DRI [Digital Research Inc.] around February or March, and now it looks like the first of September. If there's anything we can do to speed that up, we'll certainly do it, because we think that's an important product."

As for other new software or systems, Juge might have endorsed Tate's comment on Radio Shack:

"They certainly don't do everything right, but they do enough right to survive. My opinion is that Radio Shack will survive and do well and astound us many times." ■

As this issue went to press in late June, Radio Shack confirmed that Jon Shirley, vice president of computer merchandising, was leaving the firm to become president of Microsoft Corp., effective August 1st. Shirley told *80 Micro* that his replacement, while "almost 100 percent likely to be someone from within" Radio Shack, had not been decided upon.

For a full story on Radio Shack and Microsoft, see next month's news section.

HARDWARE

Growing pains for stringy floppy

Delayed success leaves pioneers behind.

Since its introduction at the 1978 West Coast Computer Faire, the Exatron Stringy Floppy (ESF) has attracted a small but loyal following of TRS-80 Model I owners, but has never caught on with the mass market. That's changing now, as new low-end computers launch a stringy floppy boom—which, ironically, leaves Exatron and its current customers out in the cold.

Earlier this year, Texas Instruments licensed the tape-cartridge drive's technology from Entrepo Corp. (Exatron's new name) for its CC-40 Compact Computer (see *80 Micro*, June 1983, p. 318). At June's Consumer Electronics Show in Chicago, stringy floppies appeared in several products, from Atari's Graduate upgrade for the VCS to Uni-tronics' 48K, \$200 Sonic home micro.

And, giving perhaps the biggest boost to the stringy floppy, Coleco included a non-Entrepo unit in its 80K CP/M-compatible Adam, for which company spokesmen expected sales of half a million units by Christmas.

Meanwhile, current and potential Exatron end-users are stymied by the Sunnyvale, CA firm's reorganization. Wayne King, chairman of Exatron's New York City workshop (a combined user's group and sales force), said he'd heard the company would no longer sell drives or software, just blank wafers, the stringy floppy's storage medium.

It appeared, King told *80 Micro*, that Entrepo was abandoning the retail market for OEM sales, though official information was hard to come by: "Entrepo hasn't notified workshop chairmen, which they could do for the cost of a mailing. The management they have seem to me to be a little bit nutty. They can't decide in which direction they're pulling."

Robert Howell Sr., Exatron's founder, confirmed King's hunch about Entrepo's market direction, though he admitted that the situation was "very confused": "Entrepo is the new name of the company. I started this thing in

my garage several years ago, and about a year ago we brought in new financing and outside management, and they elected to change the focus of the business from the end-user to OEMs. What's going to happen to the end-user business is too confusing to guess. I think it'll get picked up by somebody and carry on as a separate business.

"The [Entrepo] board of directors doesn't know what the hell they want to do yet," Howell said on June 7. "I'm [Exatron's] chairman of the board, founder, major stockholder, and currently I don't have a thing to say about anything. If we got this thing reorganized, I'd hope to restart the end-user business."

Asked to summarize his view of the stringy floppy's prospects, Howell was optimistic but candid: "My opinion is that the stringy floppy is going to be the standard mass storage technology for the under-\$500 computer and be produced in the tens of millions each year. But I've been believing that for a long time and it hasn't happened yet.

"It is a superb machine—small, fast, inexpensive, easy to use. I don't think there's anything that can touch it. But there's only so much you can do without money. I've been running this out of my garage for a long time."

King agreed, saying that the ESF's low profile had obscured its merits as a high-speed, low-cost compromise between cassette and disk systems. "The machine is a great little device, and it'll do a lot that's never really been tapped," he said. "I'd like the situation to be that when you buy a computer and start out with bulk I/O, before you have disk drives, you have something like a stringy floppy."

"But they never did support software very well, which I thought was a big failing, because the stringy floppy would support a lot of things that it never had software for."

According to King, Exatron had had to rely on hobbyists rather than offer its own line of programs: "The way it was,

The stringy floppy is staging a comeback.

if someone wrote a nice patch to convert a disk program and sent it to them, they'd buy it, but that was about it. So mostly you were left with cassette-based software, and the advantage of that is it loads very quickly, but other than that you might as well have a cassette." The only major commercial program offered for the ESF was Electric Pencil 2.0.

Of the new Entrepo management, King said "They've changed a whole lot from what they used to be. They used to be very reliable, very interested in the end user, and very willing to help out. Obviously, they've got their eyes on the big money, they're going to be the big OEM manufacturer. Which is all right, but if they'd supported the stringy floppy they could have already started a market. There'd be a big base of people using stringy floppies, so other companies would support it."

Robert McDonald, president of Entrepo, shared Howell's optimism while answering King's complaints. "We're winding down the mail-order part of the business," McDonald confirmed. "We have decided to end it. It's going to be ended as far as Entrepo is concerned, it's going to be sold off to somebody. It's a small business, and less strategic, and in a way distracting from the OEM side. . . . Entrepo is really concentrating on selling OEMs to the large computer manufacturers."

However, McDonald said, the re-

MODEL 4 OWNERS

CONVERT your MODEL I/III PROGRAMS TO RUN ON MODEL 4

Do you have a lot of time and money invested in Model I/III software, well now you can convert Model I/III BASIC programs to Model 4 with **CONVERTR**.

CONVERTR will eliminate unnecessary spaces and insert all required spaces in your BASIC programs. **CONVERTR** will identify lines which contain keywords not supported by Model 4. **CONVERTR** will identify lines and keywords which the Model 4 handles differently. **CONVERTR** is menu driven and includes an option to list your program and error table on your printer.

CONVERTR comes on a disk and includes an instruction booklet on How to Convert your BASIC programs.

The Original GREEN-SCREEN

The eye-pleasing Green-Screen fits over the front of your TRS-80 Video Display and gives you improved contrast with reduced glare. You get bright luminous green characters and graphics like those featured by more expensive CRT units.

Don't confuse the Original Green-Screen with a piece of thin film stuck to the face of your video tube, such as that advertised by others. The Original Green-Screen is mounted in a full frame perfectly matched to the color and texture of the TRS-80 Video Display. It is attached with adhesive strips which do not mar your unit in any way.

The full frame design of the Original Green-Screen "squares off" the face of your video display and greatly improves the overall appearance of your system.

(Specify whether for Model I or Model III)

Gold Plug - 80

TRS - 80+MOD I, MOD III, COCO

A hhhh, instant relief! At last there is a permanent cure for contact oxidation on Model I edge connectors. Many TRS-80 users are familiar with the symptoms: untimely resets, spontaneous reboots, or the inability to get the computer started at all without a frustrating session with a pink eraser.

The Gold Plug 80 is a well made device consisting of an edge-card plug with gold plated contacts, available with either 34 or 40 contacts. The rear of the plug has ter-

минаl tabs which fit exactly over the existing foil fingers on the TRS-80's connectors. After installation, the original plugs have been extended about a half inch, meaning that the plastic door covers no longer fit. This did not trouble me, but you should take it into consideration. E.A.P.'s advertising leaflet, by the way, cautions you about the doors, which is refreshing. They also have the excellent policy of permitting you to return any plugs ordered for a refund if after seeing them you are un-

willing to undertake the installation.

An excellent set of instructions accompany the plugs, and they are shipped promptly. I ordered mine by mail on a Monday and received my set of plugs by first class mail on Tuesday of the next week.

Installation

Installation requires a soldering iron (I use a 40-watt Weller), Rosin-core solder, a Phillips screwdriver, and your last Pink Pearl. The keyboard and Expansion Interface have to be disassembled to get at the connectors, which are then cleaned—the eraser's last fling. The Gold Plug 80 is fitted over the existing plug with the contacts centered, and then soldered to the board. I have some soldering experience, but it proved to be an easy, safe job. The contact is heated, a very small amount of solder applied, and then you go on to the next contact. It took about an hour to do all six plugs.

vised company would not forget today's 5,000-10,000 ESF owners: "It's going to be supported," he said of the ESF. "We did confuse people, by the way; as we ship new units we're sending a letter explaining the change. The product will probably be supported by another company that will emerge, probably not under the Exatron name. When there is an end-user thing that re-emerges, we will advertise and promote that far and wide and alert people to it."

As for the OEM market, McDonald described the new wafer-equipped computers as only the tip of the iceberg. "Texas Instruments has a license for the whole technology, to manufacture it for their own requirements. So they can do what they want with it, except sell it to other people. Coleco has gone to another technology, primarily because we are not ready to gear up at the speed they wanted. We expect to be in high-volume production by mid-September."

At the Chicago CES, McDonald said, "We had interest from virtually everybody in the low-end computer market," mentioning Milton Bradley as well as Atari and Sonic. "We have discussions and contract negotiations going on with other companies."

What about software? "One of our reasons for working with OEMs is to have them supply the software. We won't be doing that ourselves, though we'll be supplying duplicating services for the manufacturers."

"What we're doing initially is letting the OEMs use all their pull and power to get the software authors, the publishing houses, in with them with the media."

"I think downstream we may get back into it. We won't have the hobbyists write or convert software and send it in—some of those people may participate; some of them are very talented folks. But we'll try to do it more professionally."

In an echo of King's and Howell's opinions of the stringy floppy's future, McDonald predicted, "I think it's finally going to get its due in the marketplace. We're very, very bullish. We're so bullish that we think we have a chance to become the media standard. Execution is the problem now, not market acceptance. We're really planning on this being a large industry."

"We never did handle the end-user business very professionally," McDonald said of the Exatron/Entrepo switch.

"We did not handle the phase-out very professionally, either, so I guess I owe an apology to the end-user."

As this issue went to press in late June, Howell reported raised hopes for confused owners: "It looks like we're well on our way to reorganizing our end-user business. It looks as if the ESF

owners' association is going to take over support of the product and distribute both hardware and software.

"There is a group of people actively involved in putting together a support system. If it happens, we'll send an announcement in the mail to our customers." ■

GAMES

Whatever happened to Tandyvision?

Plunging prices end Mattel/RS venture.

First there was Atari, with a monopoly on both home video games and VCS software; then came Mattel Electronics' Intellivision, with George Plimpton hawking better graphics. Then came ColecoVision and the improved Atari 5200, and hundreds of game cartridges from dozens of companies. The video game industry has always been chaotic; by early this summer, with consumers abandoning game systems for competitively priced home computers, it appeared the bottom had dropped out of the market.

Radio Shack is a computer, not a video game, company; the Color Computer is priced and positioned above both game machines and low-end micros, and the Models I/III/4 have unashamedly bad graphics. But the Fort Worth firm did make a stab at the Space Invaders market last year with Tandyvision—a relabeled Intellivision, made by Mattel and sold in Radio Shack stores.

Tandyvision was introduced in November 1982, just in time for the Christmas buying rush. Within six months, it had sunk without a trace. Gail Lacourse, manager of Displayed Video's RS dealership in Ypsilanti, MI, told *80 Micro*, "Radio Shack has discontinued those, I believe around March. They were SOWG's, Sold Out When Gone. They don't even sell cartridges anymore. We couldn't order them if we

tried."

What happened? From all indications, Tandyvision was torpedoed by the unsettled game market generally and by Intellivision price cuts specifically: Radio Shack bought units from Mattel and, adding a margin for profit, sold them to consumers—until Mattel offered price reductions and rebates for its version, leaving Tandy in the position of someone who buys something the day before a sale.

When Tandyvision debuted in the November 1982 catalog, it was competitively priced at \$249.95. Within weeks, however, Plimpton was on TV plugging a \$50 Mattel rebate. By spring, discount stores were offering Atari VCS systems for under \$100, and Intellivision and ColecoVision prices had fallen to \$180, with sale prices as low as \$150.

"From what we understand, what happened to Radio Shack was the same thing that happened with the TDP-100 versus the Color Computer," said Jack Torres of Computer Plus in Littleton, MA. "When Radio Shack took on the line, Mattel reduced the price, and you could get an Intellivision for less than a Tandyvision."

Added Displayed Video's Lacourse, "The reason [Tandyvision was discontinued] is the simple fact that Mattel, while selling the product to Radio Shack, did not inform Radio Shack that they were going to continue to lower prices and offer \$50 rebate programs. So the dealers were complaining, be-

cause people could buy them in the store for less than they [dealers] were paying for them."

For its part, Mattel isn't talking. Kathy Kennedy, Mattel Electronics' press agent, told *80 Micro*, "Our company has a policy of not commenting on someone else's business."

While the unit was a Mattel item, she said, "Tandyvision was really their brand name. They marketed it and that was their product. You'd have to talk to Radio Shack about that."

Kennedy did acknowledge Mattel's aggressive rebate policy: "There were like three rebates at different times. There was one in October; I believe there was a \$25 rebate as well, leading up to Christmas." Also, there were Plimpton's \$50 rebate commercials of early 1983, with the spokesman first refusing to participate in a circus ad and later agreeing after being put in a lion's cage. "There have been several rebates," Kennedy concluded, "to help the retailers sell the product and increase our installed base."

Leon Lutz, Tandy/Radio Shack's video game buyer, confirmed that the remaining Tandyvisions will be the last: "Oh, we're selling them out. We've got them on sale at \$159.95 and cartridges at half price. . . . We haven't bought any more units from [Mattel]. They dropped Intellivision and came out with Intellivision II, which we don't sell."

The product will, he said, be supported: "We service them ourselves, if it's a Tandyvision. The cartridges are Intellivision cartridges; if there's a problem with them you send it to Mattel. We have quite a large number of cartridges left, and we're selling them off."

Did Mattel's price reductions stab Tandy in the back? "I can't say they stabbed us in the back. I mean, the market went to pot when Texas Instruments introduced their \$100 computer. Everybody and his uncle got into the act with computers and video games. And Mattel responded to the market with a \$50 rebate."

Rather than be too critical of Mattel— "Well, the rebate kind of kicked it in the butt a little bit, but again, that was the market"—Lutz thought that some dealers might have cleared Intellivision inventories to make way for Atari. "You can find them at a lot of different prices around the country. I would assume some people are try-

Tandyvision: The TDP-100 of video games.

ing to unload some units because of Atari's wanting an exclusive marketing agreement.

"There are some Mattel distributors and dealers out there who are selling units at a very good price simply because of that arrangement; if you want to sell Atari, you can't sell any other unit. But that's just speculation on my part."

(Bruce Entin, Atari's vice president for public relations, rebutted Lutz's idea of Atari's marketing policy: "That is not true. We use exclusive distributors, but you can't tell a retailer what to sell or what not to sell. You can see the different machines in stores all over the place.")

Ultimately, Lutz said of the Tandyvision venture, "We want to be competi-

tive in the marketplace, and we could not be competitive at the gross margin the company operates on. We tend to want to make money on our product line."

Has the Tandyvision incident soured relations between Mattel and Radio Shack? "We're still good friends, in fact I met them at the CES show in Chicago." Might the two work together again? "It's not impossible. There's nothing planned at the moment, but it's not unthinkable."

"I think they're a good company, a very good company, and it was just their having to respond to the marketplace, not a problem with us. There's no bad feelings in the company."

"The video game market is kind of unstable, in my opinion." ■

Game Over?

From recent reports, it looks as if losing the video game business was no hardship for Radio Shack.

In London, where Intellivision prices have fallen from \$218 to \$157, the head of Mattel's British unit told the *Wall Street Journal*, "Our forecast for 1983 and 1984 is just about static. The market is under attack by the home computer sector."

Looking at U.S. companies, *Fortune's* Bro Uttal was more severe: "The

entire video game market could collapse because the line between game consoles and home computers is blurring. If the line vanishes, the computer is likely to replace the game console because it can do more than just play games."

At this rate, the whole industry might repeat the marketing shift from games to programming that Tandy made with the Color Computer. And Mattel—whose Aquarius computer has barely scratched the market—may be the worse off.

DEVELOPMENT HARDWARE/SOFTWARE GTEK MODEL 7128 EPROM PROGRAMMER

- Microprocessor based intelligence for ease of use and interface. You send the data, the 7128 takes care of the rest.
- RS-232 interface and ASCII data formats make the 7128 compatible with virtually any computer with an RS-232 serial interface port.
- Auto-select baud rate.
- Use with or without handshaking. Bidirectional Xon/Xoff supported. CTS/DTR supported.
- Devices supported as of DEC 82.

NMOS	NMOS	CMOS	EEPROM	MPU'S
2758	2508	27C16	5213	8748

2764	68768			8751
27128	8755			8755
- Read pin compatible ROMS also.
- Automatic use of proper program voltage based on type selected.
- Menu driven eprom type selection, no personality modules required. (40 pin devices require adapter)
- INTEL, Motorola and MCS-86, Hex formats. Split facility for 16 bit data-paths. Read, program, and formatted list commands also.
- Interrupt driven type ahead, program and verify real time while sending data.
- Program single byte, block, or whole eprom.
- Intelligent diagnostics discern between eprom which is bad and one which merely needs erasing.

- Verify erase and compare commands.
- Busy light indicates when power is being applied to program socket.
- Complete with TEXTTOOL zero insertion force socket and integral 120 VAC power supply. (240 VAC/50HZ available also)
- High Performance/Cost ratio.

10-megabyte floppy disk

A breakthrough that will keep the familiar floppy disk competitive with

hard units can be summarized in a crude analogy: More cigars can be packed into a box standing on end than lying flat.

Eastman Kodak Co.'s Isomax floppy disk, introduced at the National Computer Conference in Anaheim, CA, uses isotropic cobalt-enhanced magnetic particles to store up to 10 times the information of a normal disk. (Isotropic means "having properties with the same values along axes in all directions.")

Today's floppies use cigar-shaped particles aligned horizontally, parallel to the disk's surface; Kodak's egg-shaped particles can store data vertically, squeezing up to 10 megabytes in a 5 1/4-inch space.

The dense-pack disks were created by Kodak's research labs in France and the U.S., and are being produced by the company's Spin Physics division in San Diego, CA. William Kroon, the division's director of marketing, told *Computerworld* that Isomax disks hold data horizontally as well as vertically, or at any angle in between, but that the vertical format gives the greatest capacity for the money. The floppies cost between \$10 and \$20 per disk in quantities of 1,000.

The disks will be commercially available late this year and carry a two-year (five-

million-pass) guarantee, but you can't pop one into your TRS-80: Kodak is now selling them to about 10 major disk drive manufacturers, who are producing drives that meet Isomax's requirements (a 20- instead of 50-micron gap between recording head and media).

Horizontal recording, however, isn't dead yet. This September, Amlyn Corp. of San Jose, CA will start shipping a half-height drive that uses a mylar scale and precise head control to put 170 tracks per inch on a 5 1/4-inch floppy, providing 3.3 megabytes unformatted or 2.13 megabytes formatted storage.

A home away from home

If a bed, a bath, sanitized glasses, and Magic Fingers aren't enough, you might want

a room with a micro. Two companies are now supplying in-room smart terminals to upper-bracket hotels, allowing travelers to play games or send electronic mail as easily as scan the room service menu.

Travelhost Inc. of Dallas, TX, the nation's largest hotel supply company, has agreed to purchase as many as 500,000 videotext terminals from Quazon Corp. over the next two and a half years. The membrane-keyboard, Z8-equipped terminals link with the rooms' TV sets and United Telecom Inc.'s Uninet

SuiteTalk: Making hotel life more electronic.

communications network to offer airline schedules, news and stock information, and e-mail (using ITT Dialcom).

The company anticipates adding games, restaurant menus and reviews, and on-line shopping to the service, which costs \$20 per hour in prime time and \$7 per hour at night. Member hotels, such as the Midland in Chicago (the first to offer Travelhost's terminals), receive \$1 every time a guest goes on line.

A similar service is provided by SuiteTalk, the creation of HotelTech International. The Belvedere, CA firm charges hotels \$1,000 a month to lease a Concierge source micro, designed in cooperation with Sony, and \$30 a month for each in-room SuiteTalk unit—a device that looks like a slightly modified Color Computer, though HotelTech cofounder Susan Martel says "It's something we're going to be making

ourselves."

SuiteTalk users have free access to menus describing hotel services, local shopping and transportation guides, and CBS and NBC information services. Guests connect with a home or office computer for the cost of the phone call, and \$20 an hour (\$9 at night) provides access to games, news, word processing, e-mail, and airline information. The hotel management can put local businesses' ads on SuiteTalk, too.

Both HotelTech and Travelhost stress their terminals' ease of use and convenience for data-hungry travelers. As the price of technology comes down and micros become standard equipment in more hotels, Martel says, even computer novices will get hooked: "I think it's going to be a terrific way to sell more personal computers. People who use them in the hotel will want one of their own."

Remembering the Model I

It's an insult if an IBM PC owner calls your TRS-80 a "museum piece," but it's

all right if the Smithsonian Institution does. The National Museum of American History in Washington, DC owns over 100 computers; of the fewer than 12 micros in the collection, one is a vintage Model I.

According to *InfoWorld* reporter Kathy Chin, the Smithsonian's panel "chooses items that it judges to be historical firsts or that represent the state of the art in microcomputing." The Model I, "one of the early popular computers," shares exhibit space with an Imsai 8080 ("one of the well-known homemade models") and the price-breaking Timex-Sinclair 1000.

Other classic-computer organizations seem to be following the museum's lead,

Is your Model I a valuable antique?

pioneering in a field where machines from 1978 have almost antique status. The Blacksburg Group of Blacksburg, VA, which preserves older micros as a sideline to producing computer books, has a Model I in its collection. And Jamie Parker, exhibit coordinator of The Computer Museum of Marlborough, MA, says her institution is

looking for a Model I donor.

InfoWorld's Paul Freiberger and John C. Dvorak, lumping early Tandy micros with Exidy Sorcerers and Sol-20s in an article titled "Obsolete Computers," say "Many tight-fisted users consider the TRS-80 Model I to be a workhorse. They have found ways to upgrade to double-density disks and add

uppercase and lowercase, and they manage to keep the machines running. . . . With about 250,000 old Model Is out there, it will be a while before they are truly obsolete.

"The big plus for the old Model I," Freiberger and Dvorak claim, "was the detachable keyboard, which was ahead of its time. It allows users to sit back in their easy chairs and type away, without having to worry about the back strain that comes from hunching over an immobile terminal keyboard. Many TRS-80 fanatics still wonder why Radio Shack puts an old-fashioned immobile keyboard on its newer machines."

Radio Shack's vice president for computer merchandising, Jon Shirley, gave one answer to that question at a Boston Computer Society meeting in May (see *80 Micro*, August 1983, p. 280). The TRS-80, Shirley reminded the audience, is extremely popular with schools; teachers and administrators prefer the one-piece design, he said, as it means fewer pieces to lose and cables to tangle. ■

Breakdowns and shakeups

● Enter Date (MM/DD/YY): MASSACHUSETTS' new auto emission and safety inspection campaign stopped abruptly on June 1. While service stations' 1,205 Hamilton Test Systems computers worked without a hitch during their first two months on the job, the machines' chips refused to accept "June" in their programs.

Repair crews hurried to fix the June bugs; some computers were temporarily reprogrammed and told it was December.

END
BYTES

Meanwhile, the state considered extending the monthly inspection period, and motorists, like uninspected cars, fumed.

● With heavy competition in the video game market, the model 400 and 800 computers showing their age, and the 1200XL crushed by the less expensive Commodore 64, ATARI has regrouped. Warner Communications has merged its troubled subsidiary's computer and game divisions, dropped the three unsuccessful micros, and introduced four new models: the 600XL, 800XL, 1400XL, and disk-equipped 1450XLD. The firm has also hired Alan Alda to do commercials.

Atari watchers expected the consolidation to mean a loss of several hundred jobs at the firm's Sunnyvale, CA headquarters. A possible upturn might come in early 1984, when Warner's Ataritel line begins shipment of computer telephone devices.

● While Atari's slipping, IBM is in the **CHIPS**. In fact, so many Big Blue imitators want Intel 8088s and 8086s for their PC clones that there's a five-month-plus waiting list. One supplier is said to have turned down a spring order for 400,000 of the 16-bit CPUs because it had already sold its entire 1983 production.

Dave House, vice president of Intel's microprocessor division, told the *Wall Street Journal*, "The market's going crazy with buying. It's not healthy and it cannot last. What's scary is that there are at least 30 customers out there who each are buying microprocessors as if they intend to capture 30 percent of IBM's market."

● Electronic Arts, a San Mateo, CA publisher of Apple, Atari, and Commodore programs, is leading the way in **CELEBRITY** software. Cartoonist Gahan Wilson is designing graphic games for the firm, and NBA stars Larry Bird and Julius Erving have donated their strategies and images to a basketball game.

● "Desktop USE is not keeping pace with desktop purchases," says the Yankee Group, a Boston-based market survey firm. In two surveys, the group found that more than two-thirds of corporate managers used their micros less than half an hour per day.

To keep desktops from gathering dust, the surveyors call for integrated, easy-to-use software, machines designed for managers rather than professionals, and more emphasis on communications (data base access, file compatibility, and electronic mail). "Function, rather than price, will fuel market growth," they conclude.

● Next month, for a change, End Bytes will not mention new computer **MAGAZINES**. This month's crop includes

Personal and Professional, for DEC desktop users; *Micro-kids*, a bimonthly for 10- to 16-year-old beepers from Warner Software; *Teaching, Learning, Computing*, a computer resource for educators; and *Personal Robotics News*, a monthly newsletter for the infant home-android industry.

● A new toll-free number lets users express their opinions or ask questions about the health effects of **CRT TERMINALS** (see *80 Micro*, July 1983, p. 338). The number, 800-521-VDTS (in Ohio, 800-522-VDTS), was created by 9 to 5, a national association of clerical workers, in the wake of the Massachusetts legislature's introduction of a bill to regulate CRT installation.

The Massachusetts bill would require six months' advance notice of CRT installation, employer-paid annual eye exams, "ergonomically correct" or adjustable equipment, and regular work breaks for CRT operators.

● Last month, this column mentioned Epson's sponsorship of the Miss World pageant in the U.K. Here in the States, the firm projects a more serious image. The latest product from Epson America Inc. is a **\$150,000 LIMOUSINE**.

As reported in *Computerworld*, Epson commissioned a Beverly Hills, CA remodeler to add 52 inches to an already lengthy Mercedes 450 SEL, outfitting the interior with QX-10 and HX-20 computers and a printer—as well as TV, video cassette recorder, telephone, bar, electric clothes steamer, manicure set, nail dryer, and shaver. It seems the average corporate executive wastes about 40 hours a month traveling by car, out of reach of office messages and stock reports; Epson's auto keeps the wheels of business turning. ■

Caimans and condos

What was that?" I asked, veering to avoid some sort of animal in our path.

"I don't know, but they're all over the place." Mad Max peered fearfully out the window. "Reptiles. Lizards."

"Stop a minute," Mercedes ordered. I did so, thinking she meant to wait while the things crossed the road. Instead, she popped out the door and came back with one.

"It's a crocodile!" shrieked Max, climbing onto the PMC for safety.

"No, it's an alligator," I reassured him. Max stayed perched.

"It's a caiman," Mercedes said, stroking the thing. "Lots of them here in Florida. Isn't it cute?"

"Cute?" We were more shocked at Mercedes' use of the word than its application to the toothy creature.

"Yeah. I think he likes me," she beamed, oblivious to Max's protests of being allergic to amphibians.

"Speaking of Alien Defense, what do you think of this?" I asked, trying to steer the conversation back to our alleged topic at hand. I handed Max a letter from Ken Corless of Pomona, NY, in which he claimed an astronomical score of 13,485,500.

"My God!" Max screamed.

"The man's obviously made a deal with the underworld," said Mercedes. "The Devil and Ken Corless."

"But wait," said Max. "Listen to this: 'It seems that if your last humanoid is being picked up and you shoot him, the program does not recognize that you should go to deep space. Instead, it thinks you have 256 humanoids left that cannot be picked up. As a result, each completed wave awards 25,600 bonus points.'"

"Geez," said Mercedes, reading over Max's shoulder. "He played for 16 hours, and had over 100 ships and bombs left!"

"He says he got 1,111,100 the legitimate way," Max continued. "There's a trick to that, too. You go into deep

space, shoot open a pod, and hyperspace. Then you accelerate slowly until you see swarms right on your tail. Next, you shoot another pod and hyperspace again. Now you've got two pods' worth of swarms half a screen behind. Any other pods you shoot will not release swarms."

"Nothing's sacred anymore," Mercedes said. "Next thing you know, people'll be getting 10 million in Lunar Lander."

After two more hours on Route 95, we finally found a restaurant on our side of the road. Two salesmen selling time-sharing vacations joined us.

"To be frank, honest, and candid, some of these scores are getting ridiculous," I said as I wolfed down my smoked swordfish. "What do you say we kick a few of these games off the Big Board?"

"Let's talk condos," Ed, one of the salesmen, said.

"What do you suppose caiman meat tastes like?" Max asked into his Boffo Burger Platter.

"That's disgusting," said Mercedes.

"It probably tastes like chicken," Fred, the other salesman, said.

"Everything tastes like chicken to you," Ed replied. "How about a little bungalow on Sanibel Island?"

"Take Galaxy Invasion, for instance," I continued. "It's no longer a game—it's an endurance test, a marathon. I'd just as soon go sit on a flagpole for three weeks."

"Get your fingers out of my fries," Max growled at Fred.

"Fred doesn't eat much these days," said Ed. "You know, I've got some nice, clean mobile homes in Clearwater."

"And Bounceoids," I went on. "We've got people who have to stop playing because they can't see the screen through all the extra ships."

"We already have a mobile home,"

Mercedes said sourly.

"Where's Sanibel Island?" Max asked.

"Hey, you said we could go to the Epcot Center!" Mercedes said.

"Life is short, kid," said Ed. "You gotta think of the future."

"So then it's decided," I said.

"Galaxy Invasion and Bounceoids are off the board. And Alien Defense. And Armored Patrol. And Liberator, and Skyscraper."

"Don't call me 'kid,'" Mercedes retorted, "unless you want this sundae down your shirt."

"Feisty, isn't she?" Fred said.

"She has her days," I sighed.

"Now, this is science," I said as we drove toward the gleaming sphere that marked the Epcot Center. "This'll be educational."

"I can't wait to see what they've done with epiphytes," said Mercedes from under a seat, where she was playing with the caiman.

"I'm going on all the rides, too," Max said agreeably.

As we approached the entrance, a dozen or so more time-sharing salesmen emerged from the bushes. They walked stiffly toward us, pale, gaunt, arms ghoulishly outstretched. I turned my eyes at the horrible sight.

"When there's no more room in hell," Max intoned, "the salesmen shall walk the earth."

I downshifted through the horde, and prepared to enter the Experimental Prototype Community of Tomorrow.

"Where's Max?" asked Mercedes as we left the Kraft exhibition. "I kept looking for him while you were up on stage dancing with the animated food."

"I don't know," I said with my souvenir hat pulled over my eyes, embarrassed at having mistaken the show for a flashback. "He must have found an

arcade."

We soon caught up with him—he couldn't go very fast with the luggage and the gas grill under his arm.

"Hey, guess what?" he asked, dropping a 35mm camera and a VIC-20. "I just bought vacations for all of us forever!"

"Huh?"

"Time-sharing! Don't you know anything? That's what Florida's all about!" he explained, sweeping an arm and nearly knocking over another sales rep. "We've got a beachfront cabana for one week a year till 2040!"

"My God," I gasped. "They got him. Look at his eyes."

"But don't they require a down payment?" asked Mercedes.

"No," he said, producing a sheaf of 14 or 15 signed contracts. "They'll bill me."

"Max," I interrupted in terror. "You have no money."

"I thought of that," he reasoned. "So I signed your old friend Winthrop's name to everything."

"Let's get some of these new high scores out of the way," I said as we ate supper. We seemed to be doing a lot of eating lately, which suited Max fine.

"Well, Kyle Hoyt, who lives right around here, sent a score for Dig Out," Mercedes said. "And he sent in high scores for Gauntlet, Missile Attack, and Outhouse."

"Thinks he's hot stuff, doesn't he?" Max grumbled.

"Now, now," Mercedes said. "You've still got the high score in Bable Terror."

Then there was Kevin Josephson of Chilliwack, B.C., who reported six high scores—in Rear Guard, Panik, Space Castle, Frogger, Crazy Painter, and Stellar Escort. Max was suspicious of all those nice round numbers, but we like to give people the benefit of the doubt.

"I'm tired," said Mercedes. "Let's get out of this place."

"Where to?" I asked.

"Well..." said Max, as he rummaged through his various contracts. "If we hustle down to Ft. Meyers, we can still catch a couple of days in our ca-

bana. Soak in some rays, do some shell-ing, set up the Cafe..."

"OK," I said. "But then we've got to head north. It's too humid down here for anything but caimans."

The salesmen were still milling about when we left. They'd overturned one car, and had an elderly couple in a Winnebago under siege.

"Don't look, Mercedes," I said. "This isn't something someone your age should see."

Naturally, she ignored my advice, and ogled the horrifying carnage.

"So what?" she gulped. "Doesn't bother me."

But she was strangely silent after that, and woke up with nightmares in the wee hours of the next morning.

"I wish she hadn't seen that," I said to Max later.

"The minions of reality stalk the borders of every fantasy land," Max said philosophically. "She's going to grow up sooner or later."

Still, the incident bothered me. I hope she never has to buy a used car. ■

Send any questions or problems dealing with any area of TRS-80 microcomputing to Feedback Loop, 80 Micro, 80 Pine St., Peterborough, NH 03458.

As the author of the *Weather Forecast* program (January 1983, p. 400), let me state that contrary to the "discovered error" in the May Debug (p. 26), the program works correctly. The error was in how Rea Plowman used the program.

First, some pertinent information about the program: It is important that the user input the barometric pressure value obtained at or near the location of the forecast, and that it is measured by a barometer adjusted to indicate the barometric pressure at sea level. Using a non-adjusted barometer, regardless of how expensive or accurate, results in inaccurate forecasts.

To properly determine the correct values to enter in the program follow these steps:

- Lightly tap the barometer and copy down the value indicated.
- Repeat this step an hour later.
- Compare the readings. If they differ by .05 or more the change is considered rapid. Less is considered slow and no change should be recorded.
- Wind direction should be recorded at the time of the second barometer reading, and is always counted as the direction the wind is coming from, not the direction it is blowing toward.
- Enter these values into the program and record the resulting forecast.

As you can see, the short, simple, and user-friendly program isn't really that simple. Use of this program by those uninformed in the fundamentals of using a barometer and determining wind direction can result in incorrect forecasts.

A.P.
Kenosha, WI

Thanks for the update; I appreciate your taking the time to clarify the proper use of your program.

I have answers for two readers' ques-

tions posed in the April 1983 issue.

First, for D.F. in Columbus (p. 380), here's how to use SuperScript with NEWDOS80 2.0:

- Load SuperZap and select the DFS function.
- Answer the file prompt with SCRIP-SIT/CMD.
- Type in F,CD,90,52.
- After the cursor finds this byte sequence, modify it to 00,00,00.
- SuperScript now works with NEWDOS80 2.0, except for the display directory function. This isn't a problem since you can now access MINIDOS.

Second, B.H. in Brazil (p. 396), can be assured that the CP-500 is almost an exact duplicate of the Model III. The only differences I can find are: The main circuit board is mounted horizontally without any RFI shielding, the power supply is sturdier and incorporates a cooling fan, and there's a resident machine-language monitor in ROM that is invoked via the break and reset keys. I've been using Radio Shack software extensively on this computer for the last six months and have had no problems.

D.C.L.
Sao Paulo, Brazil

Thanks for the information.

The correct answer to D.R.'s question (March 1983, p. 414) is this: Find the start, end, and execution addresses for machine-language programs, CLOADM the program, but don't execute it. After it's loaded, type

```
PRINT 256*PEEK(487)+PEEK(488)
```

to get the start address. Then type

```
PRINT 256*PEEK(126)+PEEK(127)-1
```

to get the end address. And finally, type

```
PRINT 256*PEEK(157)+PEEK(158)
```

for the execution address. Now you can type

```

```

M.R.
Englishtown, NJ
B.B.
Smithtown, NY

Boy, am I embarrassed about missing that one.

I'm responding to your question to those who've used EDTASM 1.0 and 1.1 (April 1983, p. 394). I first used EDTASM 1.0, but it only saves 200 lines of source code, as I discovered when I typed in a 400-line program.

I exchanged it for version 1.1 and have had no problems using it for the last 10 months except for an occasional bad load due to the use of uncertified tapes.

W.B.
Osceola, PA

I've encountered problems with EDTASM on my Model I. Everything works fine until it's time to reload the object code back into the EDTASM buffer to edit the program.

A service center told me my problem was that the code recorded after assembling wasn't object code, but was instead Assembly code. The Write command is used to store object code on tape.

J.S.
Thornton, CO

I have tried to use EDTASM 1.0 on my Model III, but it won't write system tapes. Any attempt to do so bombs the program. The manager of Radio Shack refunded my money and sent the program back to Fort Worth. To say the least, I'm furious with Radio Shack for their lack of interest in the needs of their computer owners.

R.B.
Nepean, Ontario

After 2 years of extensive research and development
XYZT Computer Dimensions, Inc is proud to announce ...

NICE™

the NEW INTERACTIVE COMPUTING ENVIRONMENT

NICE is nothing less than a comprehensive integration of all computing facilities – including DOS, numerous utilities, application programs, even games combined with menus, database, screens, libraries, reports – an interactive environment friendly to the first time user and the sophisticated systems intergrater alike. If you know what a turbo-charger can do for an auto engine, that is what **NICE** does for a computer. Clearly, it is the most exciting news to come along in software for the microcomputer

**DO YOU KNOW HOW TO BOOT YOUR SYSTEM?
THEN YOU KNOW HOW TO TURN YOUR COMPUTER
INTO THE MOST POWERFUL USER FRIENDLY BUSINESS MACHINE!!**

NICE makes development and using software – EASY. Based on a new concept this state-of-the-art software gives you the interactive power until now found only on mainframes, but at micro prices. Put a powerful menu-driven command structure at your fingertips! Run word-processors, spell-checkers, spread-sheet programs, utilities, application programs without remembering command sequence or constantly checking the manuals. Everything you need is on the screen. Create your own applications and add them to the system – use menus, relational files, customized screens, special forms. In a matter of hours, you zip through the programming projects you usually expected to take months. All thanks to a modular, consistently designed system.

**IS YOUR WORDPROCESSOR WORKING?
THEN THOSE SCREENS OUGHT TO BE IN YOUR SYSTEM !**

Using a computer should not be difficult – no more complicated than driving a car. With **NICE** you are no longer required to know all of the intricate internal operations of the computer. Creation of all types of screens, menus, inquires and reports or customized forms is as simple as writing a letter – type it on your word-processor, save it to disk, and it is ready for use. You don't have to be a programmer – just a computer user.

It's **NICE** for you!

NICE system consists of:

Interactive Control & Programming Language (ICPL)	\$150.
Menu and Screen management facilities (MSF)	\$75.
Database facility (DBF)	\$75.
Forms and Report Writer (FRW)	\$75.
Library Support Option (LSO)	\$75.
Minimal NICE configuration — ICPL+MSF+LSO.	

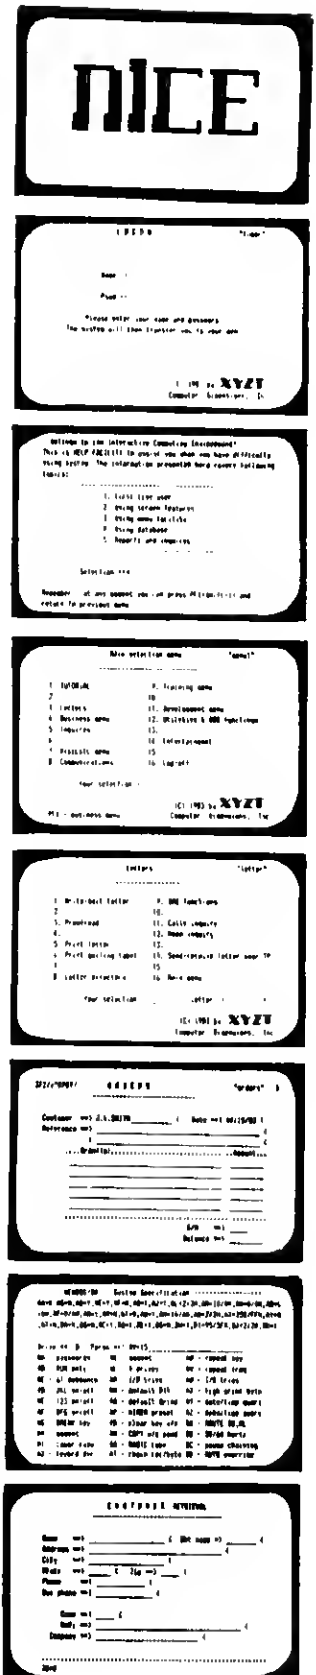

Minimal hardware requirements — 2 disk TRS-80® mod I/III. System is compatible with NEWDOS/80®-LDOS®-DOSPLUS®-MULTIDOS® floppy or hard disk.

Check, M.O., C.O.D., VISA,
MC plus \$4.00 s/h.
Foreign orders — extra \$10.00

FEEDBACK LOOP

I believe I know the source of A.L.'s problem (April 1983, p. 394), although in my case the problem usually occurred only when I had a long object code file to write to tape.

When writing the header record to tape and writing the first data record, EDTASM goes off and does some sort of calculation that takes almost two seconds. The result is a long inter-record gap between the first two records. This probably doesn't bother most TRS-80s, but in my old Model I on the CTR-80 the inter-record gap causes a problem. It appears that when the next pulse comes along after the gap, a circuit starts ringing. The result is that the first byte of the new record is garbled so that the computer doesn't recognize the record and hangs up.

I solved the problem two ways. First, I wrote a short loader program that ignores, but reports, errors in the first byte of a data record, which should be 3CH. I've found that many once unreadable tapes are now OK. The second solution was to move up to disk drives.

J.V.
McLean, VA

It seems that there are several problems with EDTASM 1.0 and 1.1. First, version 1.0 can't write more than 200 lines of source code to tape, and second, there are problems with object and source code files. The only solution for the first problem is to get version 2.0. The second problem is more difficult.

Make sure you're using EDTASM properly. There are two ways to save a file to tape. One is as a source code program, the other is as an object code program. A source code program uses the Write command and stores on tape a duplicate of your file in memory with all labels, line numbers, comments, and so forth exactly as stored in memory. If you want to add or edit the program you have to reload the source file. The source code can't be loaded into Basic with the System command. Source code is only to be used for creating object code and editing.

The object code file is the actual machine-code instructions of your program. This file is stored on tape after you issue the Assemble command. If any errors are discovered during assembly, you can still save the file to tape, but it bombs if you try to use it. EDTASM does not load object code programs into memory; it can only load

source code files. If you discover a bug in your object code program, you must use the source code file to make any changes to the program, and then reassemble and save the new object code program.

Finally, the overlong inter-record gap is a problem which I don't know how to solve, except to do as J.V. did and write your own loader program. For convenience, you may want to write a program that loads and then resaves the program without the overlong gap between records. Does anyone have a suggestion on how to handle this problem?

I recently upgraded my Model I to disk drives, but I bought two new slim-line TEAK 40-track drives. After several months of searching before buying the drives, I decided to start with TRSDOS. The Radio Shack stores were willing to sell me a disk and manual for \$35 (\$15 for the disk, \$20 for the manual), but I found a source, Total Access (P.O. Box 3002, Richardson, TX 75080, 214-458-1966), that was willing to sell both for only \$20. When I called them, they wanted to know what drives I had so they could patch TRSDOS accordingly. So, at no extra charge, I received a 40-track version of TRSDOS 2.3!

I'm just beginning to learn disk operations, but I haven't had any problems with their patched version of TRSDOS 2.3.

J.M.
Kettering, OH

What a coincidence! I was just finishing a program to patch TRSDOS 2.3 for 40-track operation when I read the letter from K.S. of Pittsburgh (May 1983, p. 381). I'm calling it VCT3540 and selling it for \$32.50. Anyone interested in converting from 35-track to 40-track operation can order it from Mysoft Computer Software, P.O. Box 417, Arroyo Grande, CA 93420, 805-481-3992.

L.P.
Arroyo Grande, CA

In response to K.S.'s question (May 1983, p. 381) about converting TRSDOS 2.3 to 40-track operation, Percom (211 N. Kirby, Garland, TX 75042) sells a program called Patchpak #4 which does this, but it also makes some patches to the operating system that makes it incompatible with your drives.

I converted TRSDOS 2.3 without making the additional changes to the operating system. Unless all the changes made by Patchpak are suitable and you have a two-drive system available for the conversion process, I suggest you contact me for a copy of my 40-track TRSDOS.

M.B.
Munhall, PA

I have a patch so that you can operate TRSDOS 2.3 with 40-track drives. If you'll forward my name and address to K.S., I'll be happy to provide him with the patch.

W.F.
Ft. Knox, KY

W.F., it's done! And thanks to everyone else kind enough to help K.S. out of his bind.

I own a Model I with the two-chip ROM set. With the following program:

```
10 A$=INKEY$:IFA$="" THEN I0ELSE  
PRINTASC(A$):GOTO10
```

it is possible to print out the ASCII codes for every key pressed except the shift-down arrow keys. Why doesn't the shift-down arrow return a value?

C.G.
Munich, West Germany

The Model I uses the shift-down arrow as a control key combination, since it doesn't have a separate control key. A control key doesn't have an ASCII value.

When you press the shift-down arrow keys, ROM interprets this as meaning that you want to type a control key (ASCII value from 1 to 26, keyed by pressing the appropriate letter of the alphabet, ASCII value 65-91). Thus, it waits for the alphabetic keystroke and subtracts 64 from it to get the control code value. In other words, if you press the shift-down arrow keys followed by the M key, the ROM returns the value 13 to your program.

I have a Model I Level II with an LNW Expansion Interface (EI) and two disk drives. I've had three problems: the CPU to EI cable, the terminating resistors, or an easily corrected problem with the FD1771B chip.

I solved the cable problem by using

an 18-inch cable connected from my TC-8. The cable grips the connectors so tightly that it almost can't be removed.

The terminating resistors are a real problem. The resistors are needed if edge connector J3 isn't used, but should be removed if J3 is connected to anything else. Moving the CPU-EI cable to J3 means that J4 is available to pick up static; this is no solution. I'm in the process of building a PC board with the resistors and a short cable so that I can put the resistors where needed.

The FD1771B problem: if the disks aren't present, the system hangs up. I installed a switch to take the chip out of service (described on p. 76 of the September 1981 issue of 80 Micro).

E.H.C.
Pioneer, CA

Thanks for writing.

In the February 1983 issue R.K. of Fallston, MD asked about formatting track zero on both single- and double-density disks (p. 410). Not long after reading that, I came up with the solution: use a forced interrupt command during format.

To format track zero, sector zero in single-density: Format track zero in double-density, issue the format in single-density command, and issue an immediate interrupt command after the data for sector one has been written to disk. Sector one is then in single-density mode and sector two in double-density.

You can format single-double-single-double, or any other combination, using a slightly different approach: Format the track in the density of the last sector; format tracks up to the next to last sector in the other density; and repeat, alternating the density and stopping the format (via interrupts) one sector less than the previous format until you reach sector zero.

N.M.
Stoney Creek, Ontario

An ingenious solution! Thanks!

I have an early Model I with an Exatron Stringy Floppy. My problem is with Basic: When I use Data and Read, the computer won't read past the first value. I've tried everything I can think of with no luck. Are my ROMs bad?

Can they be replaced? Do I have to use Model III ROMs?

G.M.
Kirkland, WA

It sounds like a problem that occurred with the earlier versions of the Model I ROMs. When Level II was introduced, it had a few bugs. Radio Shack went through several revisions before settling on the current two-chip ROM set. One of the versions, primarily associated with the revision G CPU board, had a flaw in the Read Data sequence. To correct this flaw, you have to issue the command POKE 16553, 255 before attempting to use the Read and Data statements.

Try doing this first. If it solves the problem, you don't have to worry about replacing the ROMs. If it doesn't, get a memory test program from your local computer repair center and have it check out the ROMs. The checksums given by the program should match the checksums listed for your ROM chips. If they don't match, you have to replace the ROMs.

The Model III ROM won't work in a Model I, so you needn't worry about that. However, I don't know how compatible the two-chip ROM set is with the Exatron Stringy Floppy. So call Exatron and ask them if it turns out that your ROMs need to be replaced.

I've been trying to contact The Bottom Shelf in Decatur, GA, but receive no response to my letters and phone calls. What's up?

G.P.
Glendale, WI

TBS went out of business over a year ago. I can't find any leads on the people who ran it. Sorry!

I'm writing in response to J.M.'s letter in the May 1983 issue (p. 384), and to anyone else having trouble loading the Checkers 80 program. After failing to get a successful load, I listened to the recording for faded tape, static, or hiss. What I found was a recording at a noticeably different frequency from other loadable tapes.

My solution is to physically alter the CTR-80 recorder to play at a different speed, which results in a successful load. To alter your tape recorder you'll need a small (30-watt) soldering iron, a

Phillips screwdriver, a voltmeter, two feet of insulated small gauge wire (#22 to #30) and a 50-ohm rheostat. You may also need a 6-volt lantern battery.

First, listen to the tape and compare it with another loadable tape. Determine if the recording is either too high or low a frequency. If it's too low you'll need the lantern battery.

Second, unplug all plugs and remove the batteries.

Third, remove the back of the tape recorder (two screws up front and one in the battery compartment), being careful not to break the battery compartment wires.

Next, find the cable leading from the motor (mine was brown) and follow it to where it's soldered to the circuit board. You should see one insulated wire and one uninsulated braided wire coming from the cable.

Now put the batteries in and press the play button. Use the voltmeter to find the positive end of the motor, press stop, and remove the batteries.

Remove the positive wire from the motor, and solder an 8-inch length of wire to the motor. Solder another 8-inch wire to the circuit board at the end of the negative lead and solder the center terminal of the rheostat to the positive wire.

If the frequency is too high, solder the other wire to either of the other two rheostat terminals, and skip the following instructions. If the frequency is too low, solder a short piece of wire to one of the other two rheostat terminals and attach the other to the positive terminal of the recorder. Connect the wire you soldered to the circuit board to the negative terminal of the battery. The motor should start turning. If it doesn't, double check your wiring. Remove the wire from the battery.

Wrap tape around the soldered wires and put the tape recorder back together, but don't put the screws back (reattach the wire to the lantern battery if you used it).

Put the cassette in the recorder and adjust the rheostat until it sounds right. When it does, rewind the tape and try to load it into the computer. Keep trying until it loads.

If you have a machine-language monitor, load and use it to load Checkers 80. With Checkers 80 in memory use the monitor to find the start, end, and execution addresses of the program, and then save it (after removing

THE SELECTRICTM INTERFACE

Daisy wheel quality without daisy wheel expense.

You need the quality print that a daisy wheel printer provides but the thought of buying one makes your wallet wilt. *The SelectricTM Interface*, a step-by-step guide to interfacing an IBM Selectric I/O Writer to your microcomputer, will give you that quality at a fraction of the price. George Young, co-author of *Microcomputing* magazine's popular "Kilobaud Klassroom" series, offers a low-cost alternative to buying a daisy wheel printer.

The SelectricTM Interface includes:

- step-by-step instructions
- tips on purchasing a used SelectricTM
- information on various SelectricTM models, including the 2740, 2980, and Dura 1041
- driver software for Z80, 8080, and 6502 chips
- tips on interfacing techniques

With *The Selectric Interface* and some background in electronics, you can have a high-quality, low-cost, letter-quality printer. Petals not included.

FEEDBACK LOOP

your modifications) to a new tape. The new tape should load correctly every time.

P.S.
Oregon, WI

Sounds like an awful lot of work. Rather than do all that, try what the next fellow did. If this doesn't work, then try P.S.'s solution.

I also had a problem loading Checkers 80, as well as Invasion Force, on my Model III. It seems, after listening to the tapes, that these programs were recorded at a slightly different speed than the other Radio Shack tapes. On the Model I it doesn't matter, but the Model III is more finicky and refuses to load the tapes.

My solution was to connect a wire-wound potentiometer across the remote jack on the recorder to slow the motor speed enough to read the program. I used a 5,000-ohm control with a patch cord ending in a mini-plug. Just wire one of the patch cord leads to the center and the other to one of the end terminals of the potentiometer. A few attempts may be necessary.

B.P.
Borden, Ontario

Your suggestion should work quite well for those people with tapes recorded at too high a frequency. Thanks.

M.G. of Parma Heights (May 1983, p. 388) wants to connect a Sperry-Remington 101 to a Model I. The 101 is an IBM Selectric in disguise, and the only way to use it is to add solenoids and circuitry. Escon makes a special version of their kit to convert the SR101. Since the kit costs about \$500, most people would be better off with an Epson or DMP printer.

For an off-the-cuff conversion of hexadecimal numbers, Basic is convenient. Just enter

$A=10:B=11:C=12:D=13:E=14:F=15$

Then, to convert 6E, type ?6*16+E. Of course, after doing this many times you'll eventually memorize hexadecimal notation and won't need the table. In the meantime, however, it's useful.

D.B.
Gainesville, FL

Thanks for the help.

This concerns the printer functions of the Radio Shack Inventory Control System (February 1983, p. 408). Although your method may work, Radio Shack published an article concerning that problem. It's the result of the design of their earlier line printers, and how a form feed was handled. On all current copies of TRSDOS, Radio Shack includes a utility called LPC/CMD which corrects this error. If you don't have LPC/CMD, you can get it from Radio Shack Computer Centers free of charge.

Even though this article was published in the Tandy Newsletter in 1981, they should include a note about this problem in their software packages sold today.

D.G.
Junction City, KS

You're right, LPC/CMD does correct the problem for people with older, or non-Radio Shack printers.

I have a Model I Level II 16K computer. I wanted to buy an Expansion Interface, but I now learn that they aren't available. Do you know where I can get one, or if someone else makes one that works on the Model I?

H.R.
Elkhart, IN

Rider Radio (Peterborough, NH 03458, 603-924-3911) still has a few units left. They are new 32K units with RS-232 boards, and are fully covered by Radio Shack's warranty. They cost \$550, shipping included.

LNW sells an expansion interface kit for the Model I. You assemble it yourself, putting on the components for the features you want, when you want them. Holmes Engineering also sells an expansion interface, as does Micro-Design. All three companies advertise in 80 Micro, so check their advertisements for features and prices.

I'm having serious problems with my Model III. It starts up with a high-pitched squeal from inside, similar to the sound a TV makes. After a few moments the image on the screen flickers and moves as if a strong mag-

netic field is present. What's happening, and how can I fix it myself?

B.G.P.
Aston, PA

Your squealing problem is in the picture tube, just like a TV. The insulation on the high voltage line to the tube is breaking down, causing the squealing noise. After a period of time a static charge builds up on the tube and generates a magnetic field that distorts the picture. This is a potentially dangerous situation. What you need to do is to get some "high voltage dope" from a TV repair shop and spread it on the high voltage line to your picture tube. The dope reinsulates the line, eliminates the leakage, and fixes your problem. If the repair shop gives you static about the dope, just explain the problem.

If the dope doesn't cure your problem, you'll have to take it to a repair shop. Since the problem is with the picture tube, just about any TV repair shop can do the job for you, and probably cheaper than Radio Shack.

I want to add disk drives to my Model III, and want to know what's the best configuration, 40- or 80-track? single- or dual-headed? single- or double-density?

Second, in what format are most disk programs sold (what track count, single- or double-density, etc.)?

Third, what's the best DOS?

Fourth, what brand of drive should I buy? And from whom should I get it? Also, who has the best disks?

Next, what are the differences between Level II and Disk Basic?

My friend and I have been exchanging programs we write. He has a single-density drive. If I get a double-density drive, will we still be able to exchange programs?

And finally, what's a locked disk? Is it one you can't copy?

P.H.
APO San Francisco, CA

I like short, simple questions like yours.

First, for drive zero you should get a double-density 40-track unit. This keeps you compatible with most disk-based Model III software, which is sold in that format. Many game programs are self-loading and won't boot in a drive other

of the hill!

It's a jungle out there, but the latest news on the Color Computer grapevine is that, above the swirling mists of confusion, more and more people are discovering the Rainbow.*

Now in its third year, the Rainbow has become the standard by which all other Color Computer magazines are compared. And no wonder! The Rainbow lowers above the crowd, now offering more than 300 pages each month, including more than two dozen type-in-and-run program listings, a host of articles and in excess of 30 hardware and software product reviews.

We lead the pack in Color Computer publications and are devoted exclusively to the TRS-80* Color, TDP-100 and Dragon-32. We made our climb to the top by continually offering the best and the most by such well-known authors and

innovators as Bob Albrecht and Don Inman, and games from top programmers like Chris Latham, Fred Scarbo and John Frayser. The Rainbow offers the most in entertainment and education, home uses, technical details and hardware projects, tutorials, utilities, graphics and special features like Rainbow Scoreboard and our new CoCo Clubs section.

For only \$22 a year, you get the keys to all the secrets locked in your CoCo! Are you searching through the jungle of claims and clamor? Climb above it all. Look up. Find the Rainbow.

WHAT REALLY IS INSIDE YOUR COMPUTER?

Find out in **INSIDE YOUR COMPUTER** from Wayne Green Books. I.R. Sinclair takes the cover off your computer and shows you what's inside and what it does. Novices will find information on:

- Microprocessors
- Interpreters
- Registers
- Input/output
- Machine language
- Logic operations

A look at programming ties it all together—how hardware and software make a microcomputer work. The information applies to any microcomputer system. A glossary of computer terms and an appendix on binary, decimal, and hexadecimal conversion make the book all the more valuable.

\$12.97, softcover, 109 pp., 5½ x 8½.

ISBN #0-88006-058-1

339B81

than a 40-track double-density drive. As third and fourth drives, 80-track drives are fine but you'll have difficulties using them efficiently as drives zero and 1.

Whether the drive is single- or double-sided is a personal choice you'll have to make. From a software point of view, it doesn't matter. The primary advantage is that one double-sided drive is cheaper than two single-sided drives, and takes up less room. The disadvantage is that a double-sided drive costs more than a single-sided drive.

TRSDOS is the simplest DOS to use, but is unreliable as compared with the other DOSes on the market. I prefer MULTIDOS because it reads the disks of almost any other DOS. Very handy. It also has a super Basic for program writers, and maintains the most compatibility, in command syntax, with TRSDOS 2.3. In addition, it is one of the easiest systems to learn. My next choice is DOSPLUS, which has a lot of bells and whistles added, making it very versatile and fairly easy to use. NEWDOS80 and LDOS are designed

for professionals, and require hard study before you can begin to use them effectively.

Since you have a Model III, you'll need a drive-zero kit. The drive-zero kit contains the disk controller circuitry, mounting hardware, and power supply for the drives. You must have it before you can use drives. Your next drive, drive 1, won't need a case since it mounts inside the Model III case. You also should not need a power supply, since most drive-zero kit power supplies can power two drives. All you'll need is a bare drive. Which company you buy from is up to you. Your criteria should cover price, motor speed, stepping speed (the faster the better), and your proximity to a repair center. If you get a non-Tandy drive and there isn't a computer repair center close by you, you'll have real problems if your drive needs work in the future. You may end up having to remove it from your computer and sending it to the drive manufacturer. In that case, buying a Tandy drive makes more sense since you can just

take it to any Radio Shack store and have them send it to their repair center for you.

The primary differences between Disk and non-Disk Basic are in the disk I/O commands and in a few miscellaneous commands. The real power of Disk Basic depends on which DOS you get, since they all offer different features.

Exchanging programs with your friend will depend on your DOS. LDOS, NEWDOS80, MULTIDOS, and DOSPLUS are all capable of reading Model I disks in a Model III, especially if the disk was formatted by their Model I versions. Most of them, if the Model I has a double-density board, read Model III disks in Model I systems, but they require that both computers use the same operating system (Model I MULTIDOS reads Model III MULTIDOS disks, but only if the Model I has a double-density board). For more information on their transfer capabilities, call or write the manufacturers.

Finally, there are software techniques

NEWBASIC 2.0

Adds over 40 commands to Model I/III disk BASIC.

- Customize NEWBASIC—include only those commands you need.
- Over a dozen easy-to-use and powerful **graphics** commands (eg, DRAW, LINE, CIRCLE, PAINT).
- Produce sound for music & effects.
- Pre-defined and definable keys.
- Disk-based spooler/despooler.
- Execute strings, label lines, 2-byte PEEK/POKE, restore to any DATA line, block memory move, set hi-mem, and **much, much more.**
- 70 page manual & summary card.
- **Only \$39.95!** (+ \$2.50 shipping)

Check, money order, VISA, M/C, and C.O.D. (+ \$2) accepted. CA residents add 6% tax. Foreign orders (exc. Canada), \$5 shipping. US funds only. Both Model I & III versions on same disk. Requires 48K & 2 disk drives. (Not copy protected—personal backups OK.) Works with most major DOS's.

that let you lock the data on a disk and prevent it from being backed up or copied. I consider locked disks to be a *caveat emptor*, buyer beware! Some software is worth having, even if you can't make back-up copies. You have to decide whether it's worth it.

I have a Model I with one disk drive. I need a disk directory program and would appreciate some advice. I have mostly TRSDOS disks, but also a few NEWDOS. Do any of the directory programs let you change the disk's name?

L.S.
Worcester, MA

I can't adequately answer your question since I don't use directory programs myself. I do know, however, that there are several that allow you to read non-TRSDOS disks and also let you change the disk name. You should check the advertisements in *80 Micro*. They'll give you more information about the directory programs. If you

have any back issues of *80 Micro*, check the review section. You may find a review that answers your question.

I plan to transfer some applications programs I've written in Basic on my Model III to an IBM PC. The IBM uses Microsoft Basic, as does the Model III. Both can save programs as ASCII files. The only differences I can see in the dialects are that IBM's Basic has a few enhancements that I don't need for my programs and the IBM doesn't have a PRINT@ command.

My programs don't use any machine-language routines, and use only three or four PEEKs and POKES. Can I save my programs in ASCII format on the Model III and transfer them to the IBM PC via the RS-232 port? If so, what software do I need?

M.W.
Edison, NJ

Yes, you can make the transfer. For the Model III you'll need a terminal

program such as Omniterm (\$95 from Lindbergh Systems, 41 Fairhill Road, Holden, MA 01520, 617-852-0233). Since I don't have an IBM (yet), I can't recommend terminal software, but here are three to start you off: Westico (25 Van Zant St., Norwalk, CT 06855, 203-853-6880, \$175), Microcom (1400A Providence Hwy., Norwood, MA 02062, under \$100), and Saturn Consulting Group (147 West 26th St., New York, NY 10001, 212-675-7753, no price given). Others are listed in *PC World* (555 De Haro St., San Francisco, CA 94107).

You shouldn't have any trouble transferring the programs as long as they're in ASCII format. I've had no trouble doing this from my Model I to other computers such as the Apple, Col- or Computer, Model III, and so on.

I recently purchased a new DMP-500. It has many improvements over my LP V, and I had hoped the correspondence type font would allow me to write

6 Davis Drive, Belmont, California, 94002

office notes without having to use the DWII printer in another office. I didn't expect letter quality, but I was shocked to discover that the lowercase Y in the correspondence mode ruins the entire type font. The Y is offset vertically from the other letters in the font. It almost looks like a capital letter if you use it in words like "you" or "your."

Since I need to print letters with non-slashed zeros (which is available only in the correspondence type font), neither DMP-500 type font is acceptable for business purposes. If you have any suggestions for correcting this problem, please let me know. I gather that the character-generator chip would have to be reprogrammed to correct this problem.

C.H.
Newport, RI

You're right; it does mess up the type font. I find it incredible that Radio Shack would let such a mistake go uncorrected. Can anyone help C.H. with a new character-generator chip?

I'm writing to let you know that Tandy has released three new boards for the Color Computer: an MC board, a TDP board, and a board without any ID at all. I have the last one.

The board layout is different from the C, D, and E boards. My machine is a factory-installed 32K model with 64K chips. Is this normal? All four Berg jumpers say 16K/64K. Also, the technical manual (#26-3193) doesn't apply to my board. Is there a new one?

L.C.
Folsom, CA

Yes, it's normal for 32K machines to use 64K chips. You have the latest Color Computer board, designed to convert to 64K operation with the proper software. Radio Shack is currently working on a new Extended Basic ROM chip to let you access the full 64K RAM while in Basic. I've been told that the ROM will respond to the prompt PRINTMEM with 60,383. The remaining 4K is reserved for page-zero variables, text screen, and

high memory port addresses (RS-232, SAM chip, and so on). When we'll see this new software is guesswork.

By the way, high-level management at Radio Shack vehemently denies that the Color Computer is going to be dropped. The new MC-10, according to an internal memo sent to store managers, is not a replacement unit but a new low-end computer designed to compete with the Timex-Sinclair Spectrum.

My Radio Shack technician tells me that the only manual available is the one you listed. Even though he has a new 64K board in his shop, he doesn't have any technical information on it yet. When the updates are available you'll be able to get them through National Parts (900 East Northside Drive, Fort Worth, TX 76102, 817-870-5662).

I'm confused about the numerous anti-glare screens on the market today. Will the plastic screens stop X-ray emission and eliminate eye fatigue? Do slow- or medium-decay monitors work

Put your TRS-80[®] in touch with IBM's universe

Now you can have full IBM communications capability through one of innovative Data Technology's 1/2" magnetic tape peripherals.

Featuring industry-standard interfaces, rapid data transfer rates, full operating and command subsets and a wide selection of models and configurations, IDT's magnetic tape subsystems provide economical and reliable data/program interchange, 30M bytes of storage, and disk back-up. All IDT subsystems come complete and include tape transport, formatter, intelligent controller, computer resident coupler, cables, documentation, and software. But most importantly, they help put your system in touch with the IBM universe.

well with fast-action games? How do replacement monitors compare with anti-glare screens?

B.G.P.
Aston, PA

The only thing that stops X-rays is lead. Plastic puts up as much resistance to X-rays as glass does, which is to say none at all.

Eye fatigue is the result of staring at the blue-white phosphor of a monitor for several hours, and the inability to move in relation to that screen. For example, if you could move the keyboard back and forth from the monitor and tilt the monitor's screen up, down, left, and right as you can with some other computers, you would eliminate most eye-fatigue problems.

Phosphor-induced eye fatigue is a different problem. Your eyes are not designed for constant use with these particular light frequencies. They prefer instead frequencies closer to the middle of the visible light spectrum. That's why

many people hate fluorescent lights: The white light is slightly painful to them. But white phosphor is used because it's easy and cheap to apply.

Glare also enters the picture, since anything that makes the screen harder to read makes you strain your eyes.

The primary advantage to slow- and medium-decay monitors is reduced eye fatigue, which means longer periods of work without having to rest your eyes, greater productivity, and happier workers. The disadvantage is that you have to replace your current monitor with a more expensive one.

Green screens reduce eye fatigue by changing the monitor's blue-white light to green. They help, but replacing the monitor with a green or amber screen is better. The primary advantage to plastic green screens is that they're cheap by comparison with replacing a monitor. If you get a green screen, get one made of hard plastic, not molded plastic. The soft plastic is hard to clean without tearing it.

If you decide to get a replacement

monitor, get one with a built-in anti-glare screen; it'll cost a few dollars more, but as long as you're getting a new monitor you might as well do it right the first time.

Also, note that plastic green screen covers with built-in anti-glare are not made. Placing the two together means that you have to turn the video intensity of your monitor quite high, which eventually will burn out the phosphor in your monitor. The amber/green monitors are designed to prevent this.

Finally, using games with the slow- and medium-decay green/amber monitors isn't a problem. You will notice a slight tail (as the phosphor decays) behind rapidly moving graphics objects, but you quickly get used to it. And besides, the reduced eye fatigue more than makes up for this disadvantage. ■

Terry Kepner is a freelance writer and programmer, and the vice president of Interpro. He's been writing about microcomputers since 1979.

TRS-80 Model I is alive and well at the Micromint. We still have the expansion interfaces you need!

Disk-80 Expansion Interface

As featured in *Clarica's Circuit Cellar*
Byte Magazine, March 1981

Reviewed in March '82 "80 Microcomputing"

DSK01	Disk-80 Expansion Interface with 32k RAM A & T	\$330.00
DSK02	Disk-80 Expansion Interface with 32k RAM & Printer Port A & T	380.00
DSK03	Disk-80 Complete Kit with 32k RAM & Printer Port	275.00
DSK04	Disk-80 Bare Printed Circuit Board	48.00
DSK05	Printer/Power Supply Circuit Board	16.00

The Disk-80 Expansion Interface is the perfect peripheral for converting your TRS-80 Model I into a professional computer system. The Disk-80 controls up to four 35 to 77 track mini-disk drives, and contains a hardware data separator which substantially increases the reliability of data transfers. Attaches to the CPU/Keyboard connector and comes complete with mini-disk controller, 32K expansion memory, power supply, optional Centronics compatible printer port, real time clock and buffered bus expansion connector.

"Reviewing Disk-80 is almost incongruous, because any comments can be summarized with the sentence, 'It works.'" Dennis Bathory Kitz, 80 Microcomputing, March 1982.

All interfaces are Radio Shack hardware and software compatible and carry a 60 day warranty including parts and labor. All units include user's manual, power supply & auxiliary TRS-BUS connector for future expansion.

Comm-80

As featured in *Clarica's Circuit Cellar*
Byte Magazine, May and June 1980

The COMM-80 is the only interface you need to turn your TRS-80 Model I into a time sharing terminal with provisions for a printer. The COMM-80 combines the most used features of the RS expansion interface in a low cost unit containing a built-in RS-232-C interface, a full 8-bit parallel port and a 40 pin bus connector for future expansion. Terminal software is included at no extra cost.

- RS-232-C Serial output port (50-19200 baud) with standard DB25 connector.
- Centronics compatible parallel printer port (34 pin)
- 40 pin card edge connector for bus expansion
- Connects directly to CRT terminals, modems, printers, other computers.
- Includes case, power supply & interconnecting cable.

CM01 COMM-80 Serial/Parallel
I/O Interface A&T \$150.00

Lots of you write urging me to include more business programs on Load 80. This month, I did just that. This issue's theme is business, and Load 80 offers some intriguing applications.

The magic of successfully automating your company lies in finding a program that satisfies your requirement. Some of this month's programs may be just what you need; some may not. How do you decide?

You should begin by defining what you need the computer to do. Consider what you currently do manually. Do you send out large mailings? A data-management system can create and sort your mailing lists. Do you want the computer to print your mailing labels?

Analyze your business needs

You must select software compatible with your printer.

How do you keep track of your inventory? The right program can predict your needs and encourage low overhead by reducing your on-hand merchandise.

Do you need special reports on a regular basis? Do you handle a lot of correspondence? A good word processor is a must.

Additionally, you must examine your business's projected growth over the next year, five years, and even 10 years. The software you choose must keep up with your growth.

The computer's role in business management is handling information. A well-chosen system provides up-to-date reports faster than you can generate by hand, increases productivity, and improves your use of capital thanks to more efficient information-handling. In other words, the computer helps you coordinate information.

The small-business computer system consists of three parts: the computer (hardware), programs (software), and support (liveware). As a TRS-80 owner, you've already made your hardware choice.

Your software choice should take into consideration your company's needs as well as the people who will work with the program. If you're going to run the computer yourself, you should realize that data entry could take a lot of time that might be more profitably spent. If you plan to train an employee to run the computer, the program must be well documented and easy to use.

You should also analyze the software to see if it needs modifications for your particular business and whether you can make those modifications yourself. Commercial business applications do standardized jobs; if your company handles those jobs in an unconventional way, you need to customize the program.

Not all the programs we've included this month will help you. But they give you a chance to see what a computer can do for your business. Think carefully about whether you need each program in your business before you incorporate it.

ANNOUNCING: CLEANER 80 The System That Makes Your Cleaning Kit Worth 15 Times The Price You Paid For It.

Cleaner 80 is a software program designed to give your yearn-may's worth — and mine — what it comes to cleaning the disk drive head of your TRS-80 computer.

With this system, you can get up to 400 cleanings out of each disk drive head cleaning kit — instead of the 25 cleanings specified by the manufacturer. That's 15 times the number of cleanings you would normally expect to achieve.

Order yours today. Please specify whether you need the TRS-80 Model I or TRS-80 Model III version.

It's A PLUM

\$39

Plug into CTR
EAR and REM
jacks

Computer plugs
plug here instead
of into CTR

No more volume juggling when you SYSTEM and CLOAD. No more plug pulling either...with built-in audio and built-in CTR motor pushbutton you can find and position pgms with ease. Put silent 'marker' gaps at the touch of a button too. Plus hear what's happening as you load and save.

The new PLUM (power-loader-universal-model) works with most CTRs incl. R/S CTR 80, 80A, 40,41,CCR81 and others. Install in seconds.... just plug between Mod I/III/4 and CTR. Works all bauds including =kwik=. No line cord. Auto on-off...standard 50¢ battery lasts for months. Life warranty on loading module. Money back guarantee of satisfaction.

TRUNKS FOR THE MEMORIES.

Introducing the most logical place to store Elephant Memory Systems® (or lesser brands of disks): The Trunk.

With its alphabetized library index, you can file or retrieve up to 60 disks, instantly.

The Trunk is made of durable molded plastic with a hinged, one-piece lid, to keep disks safe from dust, dirt, and other detriments which disks despise.

And, it's portable. Because the lid doubles as a carrying handle so your Elephant Memory Systems® disks can go anywhere you do.

There's a model for 5¼" and 8" floppies, as well as a cassette-and-game file and a special Atari® version.

So if you're looking for the best disk storage system on the market...

The Trunk is an open-and-shut case.

THE TRUNK. ENDORSED BY ELEPHANTS.

Elephant Memory Systems® Disks

A full line of top-quality floppies, in virtually every 5¼" and 8" model, for compatibility with virtually every computer on the market. Guaranteed to meet or exceed every industry standard, certified 100% error-free and problem-free, and to maintain its quality for at least 12 million passes for over a life-time of heavy-duty use!

Marketed exclusively by Leading Edge Products, Information Systems and Supplies Division,
55 Providence Highway, Norwood, MA 02062.

Dealers: Call toll-free 1-800-343-8413; or in Massachusetts, call collect (617) 769-8150

September is back-to-school month. I go back to Clown-Around University to work on my degree in Funhouseology, and you go back to the next higher grade.

This is kind of a sad time for some people who get left behind—the little brothers and sisters of the world. It will be lonely for them.

Before I burst into tears, let me say that I've done something about this situation. I have some programs you can take home for the kids who haven't started school yet.

All these programs have a few goals: learning the alphabet and numbers one to nine, adding numbers up to five, and learning the keyboard for typing. The programs are short.

Some work in both Level II and Color Basic. Others have separate Level II and Color Basic listings. In all programs, line 100 indicates for which sys-

The Key Box

Model I and III
Color Computer
4K RAM
Level II Basic
Color Basic

tems the listings are meant. Look closely to be sure you're typing in a program that fits your machine.

Now, I'm not an educator; I'm just a poor old fun house attendant. But I do know a few things about little kids and learning and computers.

First, the programs here leave out some important aspects of

learning: hearing, saying, and writing down. Little kids need crayons, pencils, and paper to play with the ideas in these programs.

Printing numbers and letters gives them small muscle coordination that helps when they go to school and learn what to do with a pencil. Sesame Street and you can help the kids

hear and say their numbers and letters.

Second, make sure the kids don't think the computer is magic. Let them know it's just a machine.

Third, small children are often smeared from head to toe with peanut butter and jelly, so wash them off before you let them near the computer. Don't tell them I said that.

Before you open the Early Childhood Learning Surprise Packet, I want you to know that I'm willing to help anyone who has trouble keying in Fun House programs. My address is: Richard Ramella, 1493 Mountain View Ave., Chico, CA 95926. A self-addressed, stamped envelope gets you a quick answer.

**HEAR PAC-MAN!
WRITE MUSIC! ETC.**

\$19.95

**FOR YOUR MODEL I, III OR 4
ECONOMICAL!**

Our kit enables the amplifier and speaker in your CTR-41, CTR-80, or CCR-81 recorder to provide sound generated by your TRS-80*. Nothing else to buy. Does not eliminate any other function. (Modified CTR-80 will not accept batteries.)

ANYONE CAN INSTALL IT!

No trace-cutting. Detailed instructions permit easy installation within one hour. CTR-80 kit requires only a screwdriver to assemble. CTR-41 and CCR-81 kits require drilling one hole. Some CTR-41's may require removal of excess solder at one mounting point.

NO CLUTTER!

Installed components are enclosed within and are integral with the recorder case.

ONLY \$19.95 POSTPAID!

Virginia residents add 4% sales tax. Be sure to specify recorder model CTR-41, CTR-80, or CCR-81 and send check or money order to:

Repeat

This short program is for Level II and Color Basic. Type RUN and tap the enter key. Then let the little one take over. Any key tapped endlessly repeats a character on the screen. When the child taps another key, it starts repeating.

This is fun for very small children. It shows that something happens on the screen when you tap keys.

Letter Find

This listing works in Color Basic and Level II. The program prints the entire alphabet except for one letter that it leaves blank. The player figures out which letter is missing and taps that letter on the keyboard.

The program indicates whether the choice is right or wrong and prints the mystery letter. It repeats endlessly. This exercise helps the youngster learn the alphabet and the keyboard.

ABC

Again, this listing supports

NODVILL DIET PROGRAM

\$69.95

"TAKE A BYTE"

MAINTAIN, LOSE OR GAIN WEIGHT
With your TRS-80 Double Density Disk Model I/III/4
and
The NODVILL DIET PROGRAM "Take a Byte"

you can quickly and accurately:

- * Calculate caloric and nutritive food intake
- * Evaluate nutritive value of your diet
- * Compare daily diet to individual RDA Chart
- * Create personalized daily meals and menus
- * Plan varied daily menus based on sound nutrition
- * Save records of daily meals and menus for future planning
- * Print nutrition charts, food, meal, menu and grocery lists

"Take a Byte" is a Modular BASIC Program

MAIN Program Menu

- (1) Recommended Daily Dietary Allowance (RDA) CHART
- (2) 733 Expandable Random Access FOOD LIST Data File
- (3) 28 Nutritional MEAL LIST Data File Examples

Level II and Color Basic. The player starts with a score of 100, but the screen is blank. The object is to type in the alphabet in order from A to Z.

Nothing happens if the player types a letter out of order. If he makes three wrong choices in a row, the right letter briefly appears on the screen. The game ends when the player correctly types the entire alphabet.

Type

Level II and Color Basic are in the same listing. In lines 130-170, I have written 54 words that are useful to know. The program shows the word, then the player tries to type that word. If he makes a mistake, the player taps the space bar, the mistake disappears, and he starts typing over from the beginning of the word.

You can put other words in data lines 130-170, but you must replace these words on a one-to-one basis so you always have 54 words. If you change

™TRS80 color

From the January 1981 issue of the CSRA Computer Club newsletter:

There was some amusement at the November meeting when the Radio Shack representatives stated that the software in the ROM cartridges could not be copied. This month's 68 Micro Journal reported they had disassembled the programs on ROM by covering some of the connector pins with tape. They promise details next month. Never tell a hobbyist something can't be done! This magazine seems to be the only source so far of technical information on the TRS-80 color computer™. Devoted to SS-50 6800 and 6809 machines up to now, 68 Micro Journal plans to include the TRS-80 6809 unit in future issues.

To get the MOST from your 6809 CPU - This is the **BEST SOURCE!** The **ONLY** Magazine for the 6809 Computer. Months Ahead of All Others!

68 MICRO JOURNAL

the number of words, count the total words in lines 130-170. Replace the number 54 with your new total in lines 190, 200,

and 250.

If you put in hundreds and hundreds of words, you must change line 180 CLEAR 500 to

a higher number, perhaps CLEAR 1000. Above all, remember that you can't use the left-arrow key to erase.

Number Tap

This program has separate Level II and Color Basic listings. In both versions, a number from one to nine appears on the screen. The player taps the space bar as many times as the number indicates. If a three appears, the player taps the space bar three times.

Each tap produces a new rectangle of light on the screen. The player must act quickly because if nothing happens within five or six seconds, the computer assumes a wrong answer.

In Level II Number Tap, if the answer is right, the word "YES" appears along with a smiling face. If the answer is wrong, a "NO" appears and the computer counts out the right answer.

In Color Number Tap, a right answer gets a happy song, and a wrong answer gets a sad

... Add Shipping & Handling ...

song. The right answer always appears.

How Many?

This program presents endless addition problems with answers less than or equal to nine. It plays an adding game that lets the player add up the answer in a way that teaches both counting and addition.

Say the problem is $2 + 3 = ?$. Beneath the 2 are two light blocks; beneath the 3 are three blocks of light. The player taps an answer between one and nine.

The separate Level II and Color Basic versions are slightly different. In Level II How Many?, a wrong answer gets a few rows of "NO" and a right answer gets rows of the word "YES." If the answer is wrong, the right answer flashes over the wrong answer.

In Color How Many?, a sad song signals no, and a happy song signals yes. The program corrects wrong answers.

Next month I'll have some activities that will help people

already in school. Don't play hooky because you think Fun

House will be like eight hours of math drill. It won't! ■

Fame and Fortune may be yours by entering:

80 Micro's Young Programmer's Contest 1983-1984

Grand Prize \$300, Plus Publication

- 3 1st prizes—\$200 each, Plus Publication**
- 3 2nd prizes—\$100 each, Plus Publication**
- 3 3rd prizes—\$50 each, Plus Publication**
- Honorable Mentions—Free subscription to
80 Micro and possible publication**

(These prizes are in addition to our regular purchase price.)

If you are an aspiring Programmer, 18 years or younger, enter **80 Micro's** 2nd Annual Young Programmer's Contest. Your entry may be for any TRS-80. Programs will be judged on originality, documentation (more on this below), and program elegance. The age categories are 11 and under, 12 through 14, and 15 through 18. All entries will be judged by the **80 Micro** staff.

Rules

1. Final entries must be in by November 1, 1983.
2. All entries must be submitted in a 10×13" envelope and must include: typewritten, double-spaced documentation; a printed copy of the program listing; a magnetic disk or cassette containing the program listing, the documentation, and any figures or tables; and a completed entry blank.
3. Documentation should consist of an explanation of the program, its purpose, how to use it, and the necessary software and hardware needed to use it (including memory re-

quirements). Good documentation also points out the interesting algorithms and program techniques used without giving a line-by-line account.

4. Entries must be original and unpublished.
5. All winning programs become the property of **80 Micro**.
6. The category in which you will be judged will be determined by your age as of November 1, 1983. You must not have turned 19 by that date.
7. You may submit as many entries as you like, however, each one must be submitted separately and must have all of the information and materials stated above.

TAKE II

This column features Model II, 12, and 16 conversions of earlier programs. Readers who have converted programs for their own use are encouraged to submit them.

"Mail List" first appeared in *80 Programs for the TRS-80* 1001001 Inc., Peterborough NH, 1979, pp. 54-56). This Model II conversion was done by Byron Lott of 913 Inverness Way, Sunnyvale, CA 94087.

"Mail List" offers 12 program options including search; list by name, city, state; and so on. The program lets you add and save data, or make changes to existing data. Your list, once compiled, either appears on the screen or is sent to the printer. You take care of only the postage. ■

INVESTMENT SOFTWARE For Technical Analysis of Stocks and Commodities

Trend Analysis Program (TA2) \$45.00
New version of this popular program. Calculates moving averages & deviation from trend. Makes graphs w/your printer.

Advance-Delay Program (AD) \$37.50
Calculates Adv-Dec line, up-down volume & short term trading index (TRIN) for input to TA2 Program. For breadth-of-market analyses.

Each program comes with User's Guide & several yrs of daily NYSE data. Other software also available. Free brochure.

For TRS-80 Model I or III with 48K, 2 disk drives & printer.

TYPITALL

The SCRIPSIT™ Compatible Word Processor

TYPITALL is a new word processing program which is upward compatible with SCRIPSIT™ for the Model 1 and 3 TRS-80. TYPITALL includes features like these: assign any sequence of keystrokes to a single control key. See the formatted text on the screen before printing. Send the formatted text to a disk file for later printing. Merge data from a file while printing. Send any control or graphic character to the printer. Use the same version on the Model 1 or 3. Reenter the program with all text intact if you accidentally exit without saving text.

TYPITALL (disk only) \$129.95
Manual only (100 pages) \$25.00

SYSTEM DIAGNOSTIC

Complete diagnostic tests for every component of your TRS-80 Model 1 or 3. ROM: checksum test. RAM: three separate tests. Video Display: character generator, video RAM, video signal. Keyboard: every key contact tested. Line printer: character test. Cassette Recorder: read, write, verify. RS-232-C Interface: connector fault, transmission, framing, data loop, baud rate generator. Disk Drives: controller, read data, formatting, read/write/verify with/without erasing, disk drive timer, disk head cleaner. System Diagnostic \$99.95

TRS-80 MODEL III
ASSEMBLY LANGUAGE

A complete course in assembly language, written for the beginner. Basic concepts, the Z-80 instruction set, complete Model III ROM and RAM information, programming examples; the disk controller, the TRSDOS 1.3 disk operating system, RS-232-C interface.

With the book you can also purchase Monitor #5, a comprehensive machine language monitor for the Model 1 or 3.

Book only \$16.95
Book and Monitor #5 on disk \$29.95

SMART TERMINAL

The intelligent terminal program, with automatic transmission and storage of data, true BREAK key, cassette and disk files compatible with SCRIPSIT™ and Electric Pencil™. Same program supports both cassette and disk systems.

Model 1 or 3 version \$74.95
Model 2/12 (CP/M) Version \$79.95

SMALL BUSINESS
MANAGEMENT SYSTEM

• **ORDER DESK:** Enter orders, print invoices and mailing labels, recall invoices, automatically post sales to inventory.

• **BOOKKEEPING:** Complete ledgers of income and expenses by categories. Enter or change data, print ledgers or summaries.

• **INVENTORY:** Complete list of all products sold by type and selling price.

• **CUSTOMIZATION:** Complete installation package for each business.

TRS-80 Model 1/3 Version \$350.00

TRS-80 Model 2 Version \$400.00

Order desk & Inventory \$250.00

Bookkeeping only \$150.00

What's After Basic?

If you ever wished that you had a better programming language, PASCAL 80 may be the language you dream about. It is a compiled language, faster, more accurate and easier to modify than Basic. Yet it is so easy to use that you can forget the hassles and diskette spinning of other compiled languages, including other versions of Pascal.

Now you can create your own command files that execute from DOS without having to load a language into the computer first, but do it with far less work than machine language. You can sell your compiled programs without any royalty payments!

Although designed for teaching and ideal for that purpose, PASCAL 80 also allows serious applications with a full fourteen digits of accuracy, even on log and trig functions!

PASCAL 80 allows you to create files on the TRS-80® Model I, Model III, LNW-80, PMC-80, or LOBO MAX-80 that will run on any of the other machines under TRS-DOS®, LDOS, NewDOS, NewDOS 80, DBL-DOS or DOS Plus.

SUMMER SPECIAL

FREE

Procedure Library

with

Orders postmarked by
August 30, 1983.

PASCAL 80 is used in dozens of High Schools, Colleges, and Technical Schools, and has been favorably reviewed in Byte, Creative Computing, and other magazines.

You get all of this at a bargain price of only \$99 plus \$2 shipping. If you call and order by MasterCard or VISA, we will even credit you \$1 for the phone call. Call or send your check today!

Try DISnDATA. The Disassembler That Eats Tracks & spits DATA!!! NEW!!! VERSION 2

- Outputs fully readable & understandable BASIC code from any TRS-80 Level II or III program.
- Locates program from cassette or disk and displays memory listing.
- Prints out fully readable...

• Outputs "H37F7 DEFN 'Cass?'
DEFB 03H
instead of the meaningless "equivalent",
" AB25 B.E
LD H.C
LD (HL),E
LD (HL),E
GCF
JR NZ,S+5 etc

- Automatically identifies such data areas.
- Relocates itself to any desired RAM area, up/down one byte or as many as required
- Runs on TRS-80 Model I (Level II) or Model III, 16K or more, cassette or disk

To order **DISnDATA** phone (513) 435-4480
(M-F, 9 a.m. - 5 p.m. EST), or send check or money order for

#1354-12 (Model I/III cassette) \$34.95

#1354-22 (Model III diskette), TRSDOS' format. \$39.95

(U.S. Funds only) Add \$2.00 shipping (U.S.)
\$5.00 (Foreign). \$3.00 Additional on C.O.D. Orders
Ohio Residents please add 6.5% Sales Tax

The Banner Machine

- For the TRS-80 I & III with 32K tape or 48K disk
- For use on the Epson MX-80 with Graftrax
- Uses dot graphics instead of TRS-80 block graphics
- Menu-driven program
- Operation similar to a word processor
- Makes signs up to 10" tall by any length
- 10 sizes of letters from 3/4"-8" high
- Mono or proportional spacing
- Automatic centering; Right and left justifying
- Makes borders of variable width up to 3/4"

TOLL-FREE. 800-258-5473.

It needs software before it can do anything. And good software is as valuable as any piece of hardware you can buy.

The Encyclopedia for the TRS-80 is a ten-volume reference series with over 200 programs for the Model I, Model III, and Color Computer. In each volume, you'll find:

- BUSINESS
- GAMES
- HARDWARE
- TUTORIALS
- EDUCATION
- GRAPHICS
- INTERFACING
- UTILITIES

Photographs, schematics, and program listings provide the essential detail you need for programming and tinkering.

Multi-Color Plotters

The Strobe 200 drum-type plotter features an easy-to-use control panel, an efficient paper-loading system, and a holder that accepts a wide variety of pens for graphics and lettering. It plots areas of up to 8 by 10 inches, with a step size of .002 inches along the X or Y axis.

The plotter costs \$845, including a TRS-80 parallel interface card. An RS-232C serial interface for CP/M microcomputers provides four foreign-language character sets and costs \$195.

★★★★★

Strobe's Model 260 graphics plotter is an automatic six-pen version of the Model 200. It lets you plot graphs and charts using up to six different colors with automatic pen changes. Software options let you preselect colors before using the plot and to generate high-resolution bar charts, pie charts, and line graphs (at 500 steps per inch along both the X and Y axes). Alphanumerics are also included for

labeling charts and creating pages of text.

The Strobe Model 260 costs \$995 and includes an RS-232 interface. The pens are held in a cartridge, and each color pen is individually replaceable. For more information on these two plotters, contact Strobe Inc., 897 Independence Ave., Building 5A, Mountain View, CA 94043, 415-969-5130.

Watch Out for Falling Planets!

You are space-wrecked on a civilized alien planet that is apparently deserted. You and your robot companion, Floyd, have up to 10 days to solve riddles, stop the planet from plummeting into the sun, and save the planet's plague-stricken population. Nothing too difficult for the seasoned gamer...or is it?

Planetfall, written by Steven Meretzky, is the third in a series of science fiction games from Infocom Inc. The game heightens realism by increasing the interaction between

the player and Floyd, and by allowing players to find food, eat, sleep, get sick, and even dream. Depending on your actions, different moves take different amounts of time, a serious consideration since you are competing against time to win. All game commands are in English, with a vocabulary of over 600 words to draw from.

Planetfall's packaging is different from most other games. Inside a folder-like package you find a Stellar Patrol ID Card, a space diary, futuristic postcards, and other elements that complement the story. Planetfall costs \$49.95, is available for both the Models I and III, and can be purchased from either Infocom Inc. (55 Wheeler St., Cambridge, MA 02138, 617-492-1031) or any major computer store.

Wild Irish...Disks?

A new flexible disk, produced using a special binding method, that cleans disks as they spin is being made by Irish Magnetic Industries Inc. (270-78 Newton Road, Plainview, NY 11803, 516-293-5582). The 5¼- and 8-inch disks are produced from high-quality, mylar-based, magnetically coated materials with unique surface lubricants that minimize head and disk friction and ensure data integrity.

All disks are individually

jacketed and are packaged 10 to a box. The 5¼-inch, 48-tracks-per-inch disks have a suggested list price of from \$32.90 to \$49.80 for single- to double-sided format, and single to double densities. The 8-inch disk costs range between \$49.80 and \$69.80 for single and double densities.

Reader Service ✓558

Model 4 Upgrade

Now you can convert your 16K cassette Model 4 computer to a 64K or 128K disk-drive system with Micro-Design's new upgrade kit. This kit includes the new MDX-6 disk controller board, drive mounting towers, two disk drives, a power supply, sound board, an RS-232 serial board, and memory. An illustrated user's manual provides instructions on kit installation.

The MDX-6 disk controller board is redesigned to run with the Model 4 at its 4 MHz speed. It controls up to four installed or add-on disk drives. The drives may be either 5¼- or 8-inch capacity, single- or double-sided, or any combination. The MDX-6 also has gold-plated edge connectors to ensure trouble-free operation.

This upgrade kit costs \$399 and is available from Micro-Design, 6301 Manchaca Road, Suite B, Austin, TX 78745, 800-531-5002.

Ammicro introduces the first letter quality printer for \$680 that can also be used as a typewriter.

The **MICROWRITER™** Daisy wheel printer.

There was a need for a low cost letter quality machine that would be suitable for use as an office typewriter, and as a computer printer. Ammicro met that need by combining the Microwriter parallel interface and the traditional Olivetti craftsmanship that was available in their Praxis machine.

With the Microwriter you can have the best of both worlds a letter quality printer, and a high quality office typewriter all in one machine, that sells for less than the cost of a good dot matrix printer!

It's not just printer or a typewriter that comes complete with a deluxe carrying case, but a feature-packed, lightweight machine that doubles as an office typewriter. This printer is a simple, low cost, reliable unit which can be utilized with word processing systems, microcomputers, personal computers, and small business systems. The Microwriter's low noise level and slim modern styling allow it to blend with any decor.

The Microwriter's print quality is identical to the finest office typewriters on the market. This machine is not only perfect for letters and manuscripts, but with its 165 character, 12 inch print width, the machine is perfect for letter quality budget spread sheets, price lists, data sheets, and forms.

The Microwriter can tab, rule single lines both vertical and horizontally, underline and print at 10, 12, or 15 characters per inch (switch selectable)! Its ten character memory for automatic error correction, lift off correction ribbon, and fixed or programmable page formats are a few of the many features that make it a perfect office typewriter. Microwriter not only handles letter and legal size sheet paper in widths up to 12 inches wide, but also handles fanfold paper.

There's a wide selection of 21 interchangeable daisy wheels available. And ribbon cassettes that just drop in.

Its operation as a computer printer is simple. Just load it up with paper and you are ready to go. Centronics compatible parallel output cables are currently available from stock for the following computers: IBM PERSONAL COMPUTERTM, OSBORNE 1TM, ZENITH Z-100TM, BURROUGHS B-20TM, Convergent Technologies models IWS & AWSTM, TRS-80 MODEL I, II, IIITM, APPLE II™... custom cables also available by special order.

This machine creates a new standard by which all current low cost letter quality printers will follow. Ammicro's Microwriter is truly designed for the lifestyles of the 80's and for decades to come.

Why settle for just any printer when you can have a MICROWRITER... a fine letter quality typewriter for you and your computer.

The Microwriter is the only daisy wheel printer on the market for \$680. For more information, see your local computer dealer or contact Ammicro directly.

Letter Quality for Under \$700

The ComRiter CR-II, a letter-quality printer, provides personal computer users with word processing features previously available only in more expensive printers. These features include superscript, subscript, backspace, underline, boldface, double-strike, and proportional spacing. It has a 5K buffer that lets you reproduce original and multiple copies of documents stored in memory. The buffer saves up to three pages of data and text.

The printer measures 19 1/2 by 6 by 13 inches, weighs 20 pounds, and has an average print speed of 12 characters per second. The unit features bidirectional printing and logic-seeking. The print wheel comprises the standard 96 ASCII characters, and the ribbon is the standard cassette-type.

Optional features include tractor feed, color ribbons, a cut-sheet feeder, and interchangeable print wheels compatible with the Comrex CR-I

ComRiter daisy-wheel printer. The Centronics parallel version of ComRiter CR-II costs \$629; the RS-232C serial version \$699. It is manufactured by Comrex International Inc., 3701 Skypark Drive, Torrance, CA 90505, 213-373-0280.

Reader Service ✓576

Z80 Applications

With James W. Coffron's new book, *Z80 Applications*, you'll learn the necessary programming and interfacing techniques for connecting the Z80 microprocessor to common microcomputer expansion units. You will also learn how to use the Z80 with ROM, static and dynamic RAM, and how to use basic and advanced I/O techniques, such as interrupts.

This 288-page instructive text contains diagrams and thorough examples that explain everything you need to know to implement useful Z80 applications. It costs \$14.95 plus \$1.50 shipping when ordered from Sybex

The ComRiter CR-II offers letter-quality printing and other word processing features.

DOES STRING COMPRESSION HAVE YOU TIED UP IN KNOTS?

LET TRASHMAN CLEAN UP THE MESS!

THIS PROGRAM IS A MUST FOR EVERYONE WHO USES "BASIC" ON A TRS-80. Why? Because it can reduce BASIC's string compression time delays by 95% or more.

WHAT'S STRING COMPRESSION?

When a BASIC program changes a string (words, names, descriptions), it moves it to a new place in memory, and leaves a hole in the old place. Eventually, all available memory gets used up and BASIC has to push the strings together to free up some space. This takes time. Lots of time. The computer stops running for seconds or minutes, and you may even think it's "crashed".

Yes! String compression is what's been causing all those intolerable delays. The keyboard won't work, and until all the strings have been collected, you just have to sit and wait. Then things run for a while, until string compression is needed again. And again.

If you're using your computer for business, that wastes your money. If you're using it personally, it wastes your time.

WHAT'S THE SOLUTION?

As soon as you start using TRASHMAN, those delays will almost disappear. The program is very easy to use, so you don't have to be a computer programmer to take advantage of it. It's written in "machine language" and uses only 578 bytes of memory for itself, plus two bytes for each "string" in your program. It works with other machine language programs and all the major operating systems.

HOW WELL DOES IT WORK?

If you use it with a BASIC program that has only a few strings, very little time is wasted in string compression, and TRASHMAN will be only slightly helpful. But, in programs that use hundreds or thousands of strings, including large string arrays, TRASHMAN is just what you need. If you have any remaining doubts, just look at the chart, and then get yourself a copy as fast as possible.

**TRASHMAN is available on disk
for just \$39.95.**

ATTENTION SOFTWARE PUBLISHERS:

Trashmen may be licensed for use with your packages.
Call for details.

# STRINGS	SECONDS DELAY NORMAL	PERCENT IMPROVEMENT
250	11.8	0.7
500	45.8	1.6
1000	179.6	3.5
2000	713.2	7.8

(All timings done on TRS Model I. Model III 15% faster, but pct improvements identical. Listing of timing program available on request.)

SAVE TIME WITH FASTER

"FASTER" speeds up most TRS-80 BASIC programs by 20-50%. It's helped hundreds of satisfied people and it can help you. Detailed instructions make it easy to use. FASTER analyses your BASIC programs while they run, then displays a simple change, usually one line, that sequences program variables so the ROM will find them faster.

You can use FASTER to speed up programs you've bought, as well as programs of your own. Since it isn't a compiler, your BASIC programs can be read and changed afterwards. FASTER works on business programs, models, and games. The more complex your program, the better the results.

Does FASTER really work? Yes! Just check the reviews in *Personal Computing*, May, 1981, p. 116: "FASTER is effective and easy to use"; *80 U.S. Journal*, April, 1982, p. 106: "I recommend FASTER to everyone"; and *80 MICRO* (April, 1982, p. 40): "If you...would like a significant increase in the run-time speed, then buy FASTER."

FASTER runs on the TRS-80 Models I and III, 16-48K tape or disk, and all major operating systems. **\$29.95**

"QUICK COMPRESS" takes only 276 bytes of memory, and removes the blanks and remarks from even the largest BASIC program in less than 3 seconds. It produces smaller, faster programs without altering their logic. **\$19.95**

SPECIAL: FASTER and QUICK COMPRESS: \$39.95

ERRATIC DISK DRIVES?

You can avoid unnecessary disk errors and repair hills by using **RPM**. This easy-to-use program measures the rotational speed and fluctuations of your disk drives, and warns you if they are running too fast, too slow, or unevenly.

Incorrect or erratic speed is a common cause of unexplained disk errors and loss of data. RPM's documentation explains how to detect and correct these problems quickly and easily. As *80 MICRO* (April, 1982, page 41) said: "If your drives have problems I recommend RPM before paying to get it repaired."

RPM is supplied on diskette for the TRS-80 Models I and III. We suggest you order a copy before you need it.

COMPLETE MODEL III HARD DRIVE SYSTEM \$1295.

THIS IS NO JOKE. We have a large quantity contract to bring you the highest quality system at the lowest price available. The combination of Tandon Hard Drives and Western Digital's error checking and correcting drive controller board create the backbone of the Hard Drive Specialist System. The balance of the interfacing is by (the) oldest engineering teams in the Model III/ Hard Drive business. Unlike other hard drive companies, we rate a hard drive AFTER format (a 15 Meg drive is actually 19.1 MB before format). These units are fully assembled and tested ready to plug into your computer, all that you need to add is software. Power required 105-130 volts AC 60hz
Dimensions 8-1/4"x6-1/2"x13" (just a little bigger than two regular disk drives)

A Good Combination

Applied Creative Technology Inc. (2723 Ave. E East, Suite 717, Arlington, TX 76011, 800-433-5373 or 817-261-6905), makes an adapter, called Type & Print, that connects the Olivetti Praxis 30 and 35 to any Centronics parallel-interface computer.

This unit essentially provides you with a letter-quality printer for under \$500. The Type & Print costs \$179 and requires no soldering or hardware modifications for hook-up. The Olivetti Electronic Typewriter is readily available from most office supply stores at prices comparable to the lowest-priced dot-matrix printers.

Reader Service ✓566

Disk Carousel

Now you can protect and store up to 72 5¼-inch floppies in Diskette Carousel, a high-impact, smoked plastic rotating file. Disks are stored in colorful envelopes that brighten the room and help you color-code your disks. The rotary base stores disks

vertically so that the envelopes don't touch the magnetic coating. This minimizes static electricity and provides fast disk access.

The Diskette Carousel is compact. It measures 6 by 13 inches and can be stacked on other carousels. It is sold by Inland for \$29.95 (32051 Howard Ave., Madison Heights, MI 48071, 313-585-2330 or 800-521-8428).

Programmable Menu

A CP/M version of Custom Software Services' Programmable Menu is now available. Written in machine language, the Programmable Menu reads and displays menu selections created by the operator using any text editor.

Up to nine selections can be created for each menu, with multiple menus supported. Sub-menus return to the master menu by pressing the break key.

Designed to run under Pickles & Trout's implementation of CP/M 2.2 for Models II/12/16, the program costs \$29.95 and is sold by Custom Software Services, P.O. Box 150, Porterville, CA 93258, 209-784-7966.

Back to School

VisiCalc neophytes can rest at ease. An audio cassette how-to book from FlipTrack Learning Systems "talks" you through the development of a complex VisiCalc model. *How to Use VisiCalc* begins with the basics like setting up a spreadsheet with labels, values, and formulas, and progresses to more advanced concepts, such as replicate, choose, lookup, and net present value functions. The result is an effortless introduction to every VisiCalc command and function.

The course is presented in a friendly, conversational manner on four cassettes, accompanied by a fully indexed lesson summary. By flipping over the tape at key points in each lesson, you can receive additional information on special-interest topics. *How to Use VisiCalc* costs \$65 and is available from FlipTrack Learning Systems, P.O. Box 711, Glen Ellyn, IL 60137, 312-790-1117.

Reader Service ✓569

The CP/M Workshop is a simple-to-use program that shows first-time users of CP/M-based microcomputers how to get started. The program is entirely self-paced and comes complete with diagrams, exercises, reviews, demonstrations, hints, and evaluation sessions. Within a very short time you can begin to run programs, control information on floppy disks, copy files, and print documents using rapid, interactive, and graphics formats.

CP/M Workshop comes complete with a user's manual, and both a working and back-up disk for 8-inch drives. It costs \$115. For more information, contact Datascan Inc., 2716 Ocean Park Blvd., Santa Monica, CA 90405, 213-452-9114.

Reader Service ✓553

How to Use VisiCalc: Starts with the basics.

Save Your Data!

Inmac's Datasaver protects computer systems by taking over the computer's power requirements within 12 milliseconds of a detected brownout or total power failure. It supplies back-up power for two to five minutes at full rated power output, and for 15 to 30 minutes at half rated output load. A front panel LED and a buzzer alert you to the shortage, giving you time to shut down the system before ac power loss occurs.

Datasaver consists of a rechargeable battery with an automatic charger, a solid-state power inverter, an ac line-voltage monitor, and a cut-out switch. It is available for both the Models I and III and costs \$485 from Inmac (2465 Augustine Drive, Santa Clara, CA 95051, 408-727-1970).

Reader Service ✓550

Misosys' Version III

Version III of Misosys' labeling disassembler is now available. It disassembles Z80 object code files directly from disk or from memory. Output is directed to a paged display, a printer listing, or a source-disk file. The line-numbered output file is automatically partitioned into multiple files whose size the user defines.

Wipe Away Your Problems

The Statkleer Cloth is impregnated with a dry chemical treatment that removes CRT static and built-up dust with a single wipe. Because it's made of flannel and uses no liquid cleaner, no streaking, film residue, or scratches affect your CRT screen.

It comes with a secure-seal pouch for storage, and, used daily, retains its chemical potency for up to six months. Each 12-by-12-inch cloth costs \$2.95 from Evans Specialty Co. Inc., 14 East 15th St., P.O. Box 24189, Richmond, VA 23224, 804-232-8946.

Reader Service ✓574

Model 100 Bar Code Readers

The Scanhandler MS190 is a lightweight (15-ounce) laser bar code scanner that is plug-compatible with the Model 100. With 5-volt wand emulator signal levels, the Scanhandler is a cost-effective alternative to wand readers and more expensive scanning systems.

All the optics and electronics required for non-contact scanning are contained in this Class I unit. The laser operates at 150 scans per second, has a near-100 percent first read rate, a 10-inch maximum depth of field, and delivers both audible and visual indications of successful reads.

This is the first laser bar code scanner to include scanning, decoding, and communications capabilities in a single unit. It costs \$1,800 (special OEM discounts available) and is available from Metrologic Instruments Inc., 143 Harding Ave., Bellmawr, NJ 08031, 609-933-0100.

Reader Service ✓559

★★★★★

Bi-Tech Enterprises Inc. (10B Carlough Road, Bohemia, NY 11716, 516-567-8155) now makes a bar code reader for the Model 100. It features a push-to-read switch that minimizes battery use, a

scanning rate up to 76 cm/sec, solid-state reliability, digital output, and a low-friction tip. When held at an angle between zero and 30 degrees, it reads bar code lines as small as 0.3 mm.

The reader is completely self-contained, allowing you to read bar codes in a totally portable environment. Each unit comes with software to read bar code and sample interface routines. It costs \$279.95 and comes with a 90-day warranty on parts and labor.

Reader Service ✓585

Compact Disk Carrier

Diskaddy is an anti-static vinyl disk carrier that stores up to 22 disks (both 5¼- and 8-inch) in accordion-style pockets. Each pocket holds

two disks, comes with two indexes for filing, and has an inner pocket to store disk directories. Adjustable pocket flaps have visible index tabs for disk labels and an elastic closure to secure the unit.

Diskaddy is used to carry valuable disks from place to place, to file disks in an accessible unit where every disk is readily seen, and to store disks in a protective, compact unit.

It is available from Four-dee Products Co. Inc., 9380 Activity Road, Suite J, San Diego, CA 92126, 619-693-1105. Retail prices start at \$5.99.

Reader Service ✓567

1-800-531-5002

The Gorilla/Banana dot-matrix printer.

ing Edge's new Gorilla line. It prints alphanumerics or graphics characters on fan-fold forms from 4½ to 10 inches wide, and prints 50 characters per second. The characters are printed in a clear 5-by-7 matrix similar to that of CRT terminals.

Although the Banana has the standard character spacing of 10 characters per inch, you can select double-width characters under software command. The printer also features both a character- and dot-addressable graphics mode, with a density of 63 by 60 dots per inch. Line spacing in the graphics mode is reduced from six to nine lines per inch.

Banana is compact (16 by 5 by 8 inches) and weighs 12 pounds. It has a Centronics-type parallel interface that allows direct hookup to the Models 1, 11, and 111. The Gorilla Banana is available for \$249.95 from Leading Edge Products Inc., 225 Turnpike St., Canton, MA 02021, 800-343-6833.

Reader Service ✓560

A Sex Change

A self-contained, pocket-sized gender changer that reconfigures cable-ends whose genders conflict is now available from Inmac (2465 Augustine Drive, Santa Clara, CA 95051, 408-727-1970).

The Gender Changer is an inexpensive alternative to replacing or modifying EIA

232 cables. The unit consists of two EIA 232 25-pin connectors placed back to back. Both male-to-male and female-to-female connectors are available, with all 25 pins connected. Each changer costs \$30 and comes with a one-year guarantee.

Reader Service ✓580

A Clean Hit

Copysource Anti-Stat Clean Kit is a quick and easy system for eliminating static dust on CRT screens for up to two months per treatment. Each kit contains 50 pads impregnated with a non-streak, non-stat cleaning solution and a lint-free buffing cloth.

This compact kit is conveniently affixed to your computer with self-adhesive mounting tape. Single kits cost \$12.95; three kits run \$32.85; 10 kits (a case) cost \$89.50. To order, contact Chope-Stevens Paper Co., Dept. 111, 1800 18th St., Detroit, MI 48216, 313-237-0300.

Model 16 Spreadsheet

Horizon Spreadsheet is a new and versatile spreadsheet designed for the UNIX operating system. It does, however, operate on any UNIX-like system, including Xenix for the Model 16.

The program offers the largest electronic spreadsheet available, a grid 256 cells

square (VisiCalc offers 64 by 256 cells). Unlike other systems, the Horizon Spreadsheet employs virtual memory for full use of all cells in the system.

It can be integrated to Horizon Word Processing, has a multi-line Help menu, and features powerful built-in functions including date arithmetic, and science and financial calculations. In addition, it permits both consolidation and extraction of multiple and subordinate spreadsheets.

Priced at \$245, the Horizon Spreadsheet is available from Horizon Software Systems Inc., 185 Berry St., Suite 4821, San Francisco, CA 94107, 415-543-1199.

No More Printer Fights!

Microbuffer In-Line is a printer buffer expandable to 256K. It provides memory buffer for a variety of output devices including serial or parallel printers, modems, typesetting equipment, word processors, plotters, and remote data entry.

Its Copy feature lets you print up to 255 hard copies

without tying up the computer. A touch-sensitive button on the front panel lets you specify the number of copies required. You can pause and continue the copying process as if no interruption had occurred. New data is sent to the buffer at any time during the copy process.

The buffer accepts incoming data from the computer at high speed and transmits it to the output device at the appropriate speed. You can specify nine different data transfer rates, ranging from 75 to 19,200 baud.

The Microbuffer In-Line System requires no software modifications, is available with a serial or parallel interface, and sells for \$299 (32K) and \$349 (64K). Additional memory costs \$179 per 64K. It is manufactured by Practical Peripherals Inc. (31245 La Brea Drive, Westlake Village, CA 91362, 213-991-8200) and comes with a full two-year warranty.

Lost for Words?

With FirstDraft and DocuMentor you'll never again face a blank page. FirstDraft is a text-formatting spreadsheet that helps you organize and outline documents before you invoke word processing software. By continuously refining the outline and answering computer prompts, you think through the design of the document before you begin writing.

DocuMentor, a document data-base manager, is the first computer-assisted writing package on the market. Any document that requires a standard organization but unique text requirements is covered. Templates that contain the structure, standard text paragraphs, and writing instructions are provided so you can customize your text.

Both software packages

The answer to eliminating dust: Anti-Stat Clean Kit.

CONQUER YOUR MOUNTAIN OF BUSINESS PAPERWORK

Because it's there. And it'll be there until you have Easy Calc, Business Analysis and Master Plot... three essential additions to the modern professional's survival gear. Why spend endless hours forecasting, calculating and graph-plotting when Instant Software's business programs can do it for you? At a fraction of the time. And at a fraction of what you'd expect to pay.

MASTER PLOT

Get your point across graphically with this professional graph-plotting and printing package.

- Enter graph data from keyboard equations or from your BASIC programs.
- Plot up to 10 sets of data on the same graph.
- Create your own plotting symbols.
- Choose any number of horizontal and vertical lines.
- Select your own number of interpolated points between your data points.
- Print graphs any size from 1 x 1 to 7 x 24 inches.

Plus much more! Make your charts and graphs the easy way... with Master Plot.

BUSINESS ANALYSIS

Get forecasting capabilities previously available only on large computers. This flexible, professional time series analysis and forecasting package lets you:

- Forecast and analyze sales.
- Perform product and business planning.
- Analyze stock, trends and growth rates.
- Research business cycles.
- Forecast spending and energy consumption.

Plus much more! Analyze and forecast like a pro with Business Analysis.

Requires: TRS-80 Model I and III 32K
Tape #0140R \$75.00
Disk #0152RD \$99.95

EASY CALC

Turn your TRS-80 into an electronic spreadsheet!

- Write numeric data into simple rows and columns on your screen.
- Add, subtract, multiply, divide or exponentiate single values or rows and columns.
- Calculate percentages and summations of rows or columns.
- Enter and save entire series of calculations.
- Handles up to 600 figures.

Written for non-computerists. Easy to understand instructions. Easy to use.

Requires: TRS-80 Disk 48K
Model I: #0269RD \$49.95
Model III: #0369RD \$49.95

COPYCAT

Disk backup utility

Now you can have a solution to the problem of protected software backup.

COPYCAT® is the most powerful disk backup utility yet designed for the TRS-80 Computers. It will automatically make a fast, exact copy of your master disk regardless of protection schemes used including CRC errors, dual density tracks, mixed sector lengths and irregular I.D. pack.

COPYCAT® is intended for your personal use only in making backup copies for your valuable protected software.

COPYCAT® runs on a 48K, 2 disk drive TRS-80 models I,III or 4. Specify model number when ordering.

All orders are processed within 24 hrs.

Non-certified checks require (2) weeks for bank clearance

Power Console

The Model 038 from PMC Industries Inc. (9353 Activity Road, San Diego, CA 92126, 619-695-3520) is a new power

console specifically designed for use with personal and small business computers. It protects computers and data from power line noise, transients, and high-voltage surges. It eliminates RFI/EMI noise up to 55 decibels, and high-voltage and high-energy spikes up to 70 joules.

The unit comes with a 6-foot, three-wire shielded ac line, a 15-amp resettable circuit breaker, a main on/off switch, and a power indicator light. It can be wall, floor, or bench mounted, and comes in an aluminum and steel case that measures 13 by 4½ by 2 5/8 inches and weighs four pounds. All parts are UL listed. The unit is designed for 120-volt, 15-amp use, and costs \$125.

Reader Service ✓565

The Extender

You can now simplify Basic programming on the Models I and III with Solecronics' new software package. The Extender is a machine-language patch into the Basic interpreter that lets you use labels instead of line numbers to identify a line of the program in GOTO, GO-SUB, ON...GOTO, ON...GOSUB, ON ERROR GOTO, or IF...THEN, and lets you use the first 40 characters of a variable name instead of only the first two characters.

Power Console for processors and peripherals.

This applies to simple variable names, array names, and function names of all types.

All currently running Basic programs and all Basic commands may be used with The Extender without modification. The program loads into the top 1000 bytes of memory and costs \$29.95 for both the Model I and III versions. To order, contact Soletronics, 400 Ashbury Ave., Evanston, IL 60202, 312-866-8737.

Let's Get Digital

Datalock is a high-quality digital tape assembled in a premium cassette shell with an oversized pad to ensure accurate alignment. Its specifications are superior to audio tape for digital recording: less distortion, cleaner high-end response, higher output ratio, and longer wear.

Datalock costs \$3.75 for a single cassette, \$5.95 for a two-pack, and \$29.95 for a 12-pack in a smoke-plastic case. For further information, contact National Distribution Center, 117 West 23rd St., Independence, MO 64055, 816-254-0400.

Reader Service ✓583

Helpful Wallcharts

Ever forget a VisiCalc or SuperScript command and were too lazy or busy to look it up? Crest Software (2132 Crestview Drive, Durango, CO 81301, 303-247-9518) has

found the answer: wallcharts of the systems' commands. Each 18-by-25-inch two-color chart graphically depicts all commands in large, readable type.

In addition to the commands, the chart depicts the keystroke combinations and provides explanations. In smaller print are the remaining operations and math functions. The result is a one-stop, all-inclusive reference center for anyone's use.

Both the VisiCalc and SuperScript charts cost \$4 each plus \$2 for handling and shipping. The SuperScript chart is designed for the Model III; the VisiCalc chart is for universal computer application.

matter of seconds.

CIII is available from major computer stores or directly from Computer Shack (1691 Eason, Pontiac, MI 48054, 313-673-8700) for \$24.95.

Reader Service ✓581

Disk Back-up

Beta-DTS lets Models I and III users back up one megabyte of disk images on a standard 60-minute cassette tape. Retrieval of a disk from cassette is automatic and includes formatting.

Beta-DTS requires a cassette recorder with cable, one disk drive, and 32K of memory. It comes complete with a self-boot operating system disk, a user's manual, and necessary hardware to do the job.

Available from Beta Enterprises Inc. (14049 Settlement Acres Drive, Cleveland, OH 44142, 216-362-6191), Beta-DTS costs \$149.95 plus \$5 for handling and shipping.

Printer Utility

The Printer Utility Package from MicroSmith Computer Technology (P.O. Box 1473, Elkhart, IN 46515) consists of eight programs to enhance your Model I's and

III's printing capabilities with the Epson MX-80. There are programs that allow direct printer initialization for bold, compress, and italic modes; print block, enlarged, normal, and small characters on lines left/right justified or centered; generate banners printed at 90 degrees to the normal lettering and run down the length of the paper; and print multiple copies of the same label on single- and double-wide label stock.

All these programs are supplied as Basic source files, and are written with special attention to the Epson MX-80 command codes. The package is available for either a 48K CP/M 2.0 system on a standard 8-inch single-sided, single-density disk or for the Models I and III with 48K. The price for either is \$35.

Reader Service ✓562

Bar Code Fever

The Bar Code Reader (Model BCR 232) from Digitronics is a compact handheld unit that reads, verifies, and transmits bar codes into a computer via the RS-232 port.

The unit has a ruby wand for scanning a bar code, and a microprocessor-based unit for translating the bar code

into digital data, verifying the code's readability, and then transmitting the data to a computer.

It costs \$595 and is manufactured by Digitronics, a division of Comtec Information Systems Inc. (53 John St., Cumberland, RI 02864, 401-724-8500).

Reader Service ✓557

Network Analysis

AC Network Analysis Program (ACNAP) analyzes electronic circuits with up to 70 components. It is optimized for speed and is capable of analyzing a five-node, 10-component circuit in less than one second. ACNAP works with component tolerances to provide worst case, Monte Carlo, and Sensitivity analysis.

Both linear and logarithmic frequency increments can be specified for all operations. Automatic noise equivalent bandwidth calculations are provided, as is the generation of a Spectral Data file.

ACNAP is menu-driven and allows simple entry and editing of circuits by component name. Models I and III versions cost \$39.95 and are available from BV Engineering, P.O. Box 3351, Riverside, CA 92519, 714-781-0252.

Reader Service ✓556

Blown Away

70 PSI is an aerosol dust and lint remover that removes microscopic dust from instruments, magnetic tape heads, and computer disks and drives. As the name implies, it delivers 70 pounds of pressurized, non-toxic inert gas triple-filtered for maximum purity. The gas leaves no residue and is moisture-free.

Each 14-ounce container has a three-way adjustable valve for precise spray control and an extension tube for

difficult-to-reach areas.

The product is available from Chemtronics Inc. (681 Old Willets Path, Hauppauge, NY 11788, 800-645-5244 or 516-582-3322) and costs \$3.75.

Reader Service ✓571

Printer Switch

The new Centronics-compatible Printer Switch from Intra Computer routes hard copy to a letter-quality daisy-wheel or high-speed dot-matrix printer. It measures 3¼ by 6 by 6¼ inches, and is both code and speed transparent.

The Printer Sharing Switch, also Centronics-compatible, lets two computers share one printer. The interface cable from a single parallel port of each computer is plugged into a connector on the Printer Sharing Switch. A built-in 6-foot cable is attached to the printer.

Both products cost \$165, come with a one-year warranty, and are available from Intra Computer, 101 West 31 St., New York, NY 10001, 212-947-5533.

Reader Service ✓563

Model 100 Software

Typing Teacher, originally compatible with the Models I and III, is now available from Instant Software Inc. (Route 101 and Elm St., Peterborough, NH 03458, 603-924-9471) for the Model 100.

The program comprises a seven-part package that familiarizes you with key location, goes through words and phrases, and ends with complete mastery of the board. Screen diagrams show correct finger placement and related proper techniques.

Completely documented and fully guaranteed, Typing Teacher costs \$17.95 and requires 8K of memory.

Reader Service ✓578

Bar Code Reader for the RS-232 Port

If you guessed that a Practical Peripherals Microbuffer™ printer buffer saves time, you're right. For the way it works, this inexpensive product is the most practical addition to your microcomputer system ever.

With Microbuffer, you don't have to wait for your printer to finish before you resume using your computer. Data is received and stored at fast speeds, then released from Microbuffer's memory to your printer. This is called buffering. The more you print, the more productive it makes your workflow.

Depending on the version of Microbuffer, these buffering capacities range from a useful 8K of random access memory — big enough for 8,000 characters of storage — up to a very large 256K — enough for 256,000 characters of storage.

Practical Peripherals makes stand-alone Microbuffers for any computer and printer combi-

nation, including add-on units especially for Apple II computer and/or Epson printers. Each has different features like graphics dumps and text formatting besides its buffering capabilities. You can choose one that's just right for your system.

Best of all, they're built to last and work exactly like they're supposed to.

If you're still guessing whether you can afford to have one, talk with any computer dealer. That's the best way to find out how practical a Practical Peripherals Microbuffer is.

GUESS WHO HAS MICROBUFFER.™

That's what you get with the LNW80 Model 2—undoubtedly the most versatile, powerful and fully equipped microcomputer in its class today. A machine so superior in concept and design, that it will define the standards of microcomputer performance for years to come.

VERSATILITY

The LNW80 2 performs wonders with the most complete library of software available to any microcomputer on the market today. Every LNW80 2 comes complete with this outstanding library of Business Software: **LNW SMALL BUSINESS AND PROFESSIONAL ACCOUNTING SERIES™** General Ledger, Accounts Receivable, Accounts Payable, Payroll; **ELECTRIC SPREADSHEET™**; **ELECTRIC PENCIL™** WORD PROCESSOR; **MICROTERM™** MODEM PROGRAM; **CHART EX™** HIGH RESOLUTION BUSINESS GRAPHICS CHARTING PROGRAM; **CP/M 2.2™**; **DOSPLUS™**; **LNW-BASIC™**; **MICROSOFT BASIC™**. In addition to a comprehensive line of LNW80 2 Software, it is also fully compatible with software from TRS-80® (Models 1, 3, 4), CP/M® and Commodore® worlds—a capability which gives you access to the most extensive and mature libraries of business, scientific, engineering and entertainment software applications. So no matter how big you get, or how fast your applications, the LNW80 2 will expand right along with you.

POWER

The LNW80 2 performs miracles with the computing power of 64K RAM (standard), 80K or memory matched with a mass storage capability which handles 5 1/4" floppy disks and 5 1/4" hard disk drives. And what the unit comes with built-in

controllers for 5 1/4" and 8" floppy disks (single/double sided, single/double density, up to 4.5 Megabytes capacity), the LNW80 2 also gives you the unique ability to read and write diskettes from a greater variety of other popular computers than does any other microcomputer. So regardless of how big you grow, you will never end up with thumb-twiddling down time while you expand to a more powerful system. The LNW80 2 will always have enough muscle to handle your biggest and toughest jobs.

FULLY EQUIPPED

The LNW80 2 was developed to anticipate the needs of both expense and compatibility. So the computer was designed with enough built-in features to keep you from having to spend a small fortune as you move down the road to higher levels of user sophistication. Standard features include high and low resolution graphics in both color and black-and-white, an asynchronous serial communication channel, and a wide variety of tape, printer, monitor and hardware expansion ports. In addition, the LNW80 2 contains an array of quality construction features that fully justify its remarkable one-year limited warranty.

So if you're looking for a microcomputer that will satisfy your performance needs as you grow and develop, take a long, hard look at the LNW80 2. It's the one microcomputer built to meet the challenges of tomorrow—for a long time to come. For more information and the name of the dealer nearest you, write or telephone:
